

Introduction:

The major goal of the cross-strait composite materials conferences has been to establish a platform to bring together the Chinese scientists in the universities, research institutes and industry for presenting, discussing and exchanging the research and development and technical information in the field of composite materials, covering metal, ceramic and polymer based composites. The topics have included the areas related to synthesizing, processing, structure, properties and performance of the composite materials ever since.

Acknowledgments

Proceedings of the 5th China Cross-Strait Conference on Composite Materials are grateful for financial support provided by National Natural Science Foundation of China and International Symposium Special Foundation of Shanghai Jiaotong University.
