## Chapter 1: Intelligent Transportation Technique

|                                                                                                                                                                         |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Classification of Mobility of Cellular Phone Using Linear Classification and k-Clustering</b><br>S.L. Wang and H. Wang                                               | 3   |
| <b>A Review on Intelligent Distribution for Passenger Service Resources in Airport Terminal Building</b><br>D.F. Shang, Y.P. Zhang and S.W. Cheng                       | 9   |
| <b>Multi-Stakeholders Comparative Assessment of Freeway Traffic Conditions by Data Envelopment Analysis</b><br>S. Zhang and W. Quan                                     | 14  |
| <b>A Cell-Based Regional Evacuation Model with Contra-Flow Lane Deployment</b><br>X.M. Zhang, S. An and B.L. Xie                                                        | 20  |
| <b>Research on Traffic Characteristics and Traffic Conflicts of the One-Way-Closure Work Zone on Freeway</b><br>L. Zheng and X.H. Meng                                  | 26  |
| <b>A Dynamic Emergency Evacuation Network Optimization Problem with Crossing Elimination Strategy</b><br>Z. Wang, S.Y. Ma and S. An                                     | 32  |
| <b>A Game Theory Approach for the Operators' Behavior Analysis in the Urban Passenger Transportation Market</b><br>X.W. Hu, J. Wang and G.L. Sun                        | 38  |
| <b>Price Transmission Mechanism of Transit Service in City</b><br>G.L. Sun and J. Wang                                                                                  | 44  |
| <b>Transit OD Generation Based on Information Technology</b><br>L.B. Chi and J. Wang                                                                                    | 50  |
| <b>Slow Traffic System Planning Should Pay Attention to Several Issues in Central Area of Cold Region — Take Harbin for Example</b><br>X. Yao, Y.P. Zhang and Z.C. Yang | 56  |
| <b>Risk Factors for the Injury Severity of Fatigue-Related Traffic Accidents</b><br>L.Z. Wang, Y.L. Pei and B.T. Liu                                                    | 61  |
| <b>Theory of Allocating and Scheduling Resources at Airport Passenger Terminals: A Review</b><br>S.W. Cheng, Y.P. Zhang and Y.Y. Guo                                    | 66  |
| <b>Study on the Scale Determination of Urban Rail Transfer Station</b><br>Y.P. Wang, Y.P. Zhang and H.Z. Xu                                                             | 71  |
| <b>Driving Mode at Pothole-Subsidence Pavement Based on Wheel Path &amp; Speed</b><br>Y.L. Pei, C.Y. Mao and M. Song                                                    | 77  |
| <b>Equilibrium Model of Urban Taxi Service Network Based on the Integrated Service Modes</b><br>Z. Bai and J. Wang                                                      | 82  |
| <b>Study on the Characteristic of Eye During Traffic Operation</b><br>H.Z. Xu, Y.P. Wang, C. Wu, G.Z. Cheng and Y.L. Pei                                                | 88  |
| <b>Layout Optimization of Integrated Transfer Hub of Metropolis</b><br>M. Sun and S. An                                                                                 | 94  |
| <b>NL Model on Traffic Mode Split among High-Density Town Cluster</b><br>S.M. Wu and Y.L. Pei                                                                           | 99  |
| <b>Practice Analysis of Road Traffic Crashes Accident of a City in China</b><br>L.W. Hu and J. Xiong                                                                    | 105 |
| <b>Influence of High-Grade Highway Construction on Industry-Economic Belt in Heilongjiang Province</b><br>S.X. Li and S.H. Qin                                          | 111 |
| <b>Modeling for Driver Decision-Making Behavior during Amber Signal Time at Intersection</b><br>W.W. Qi, Y.L. Pei and M. Song                                           | 118 |

|                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Evaluation Index System on Relationship between Urban Mass Rail Transit and its Surrounding Land Use Based on TOD Mode</b> |     |
| C. Ding, Y.W. Wang, B.L. Xie and Y.Y. Lin                                                                                     | 123 |
| <b>Dynamic Network Selection in Vehicular Heterogeneous Wireless Networks</b>                                                 |     |
| G.P. Lang, Y.B. Xu and L. Ma                                                                                                  | 128 |
| <b>Two-Stage Data Mining Based Vehicle Navigation Algorithm in Urban Traffic Network</b>                                      |     |
| X.T. Li and S. An                                                                                                             | 133 |
| <b>Analysis on Driver's Physiological and Eye Movement Characteristics under Alcohol Effect</b>                               |     |
| C.Y. Fu and Y.L. Pei                                                                                                          | 138 |
| <b>Research on Route Selection Model of Road Network Emergency Evacuation under Ice and Snow</b>                              |     |
| Y.P. Zhang, C.J. Song, Z.C. Yang and W. Zhang                                                                                 | 144 |
| <b>Modeling and Simulation of Bus Priority Oriented Urban Road Network Elastic Equilibrium</b>                                |     |
| L.H. Liu, Y.P. Zhang and Y. Wei                                                                                               | 150 |

## **Chapter 2: Bridge Monitoring, Safety and Maintenance**

|                                                                                                                                         |     |
|-----------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A New Combination Method of Temperature and Vehicle Load Effects Based on SHM Data</b>                                               |     |
| Z.J. Wang, R.P. Hu and S.L. Li                                                                                                          | 157 |
| <b>Reinforcing the Bridges in Tunnel Excavation Region by Using a Method Combining Jacking Superstructure and Grouting Substructure</b> |     |
| B. Jin and Y. Liu                                                                                                                       | 162 |
| <b>The Effect Analysis of Wind Load on Vehicle-Bridge Coupled Dynamic Behavior</b>                                                      |     |
| Y. Li and H. Sun                                                                                                                        | 167 |
| <b>Error Analysis and Amendment Technology of Vibration Wire Strain Sensors</b>                                                         |     |
| Z.L. Li, X.D. Zhu, Z.Y. Liu and D.J. Xu                                                                                                 | 173 |
| <b>Modified Formula of Estimating Fundamental Frequency of Girder Bridge with Uniform Cross-Section</b>                                 |     |
| Q.F. Gao, Z.L. Wang, Y. Liu and B.Q. Guo                                                                                                | 177 |
| <b>Dynamic Characteristics and Seismic Response Analysis of Self-Anchored Suspension Bridge</b>                                         |     |
| L.Z. Zhang and T.L. Chen                                                                                                                | 183 |
| <b>Study on Suspender's Fatigue Performance of Half-through CFST Arch Bridge due to Vehicular Loads</b>                                 |     |
| H. Sun, J. Ma and B. Yu                                                                                                                 | 189 |
| <b>State-of-the Art and Practice of Concrete Structures Reinforced with FRP Bars</b>                                                    |     |
| L.Z. Zhang and W. Xiong                                                                                                                 | 195 |
| <b>Dynamic Response Analysis of Half-through CFST Arch Bridges Affected by Crossbeams Setting</b>                                       |     |
| J. Ma and Y. Li                                                                                                                         | 201 |
| <b>Review of Studying on Fatigue Damage of Concrete Bridge</b>                                                                          |     |
| L.H. Yin and Z.L. Wang                                                                                                                  | 207 |

## **Chapter 3: Advanced Technique in Road Engineering and Material Science**

|                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------|-----|
| <b>Evaluation of Warm-Mix Asphalt Compaction Performance by Variable-Temperature Gyrotory Compaction</b>        |     |
| L.M. Wang and Y.Q. Tan                                                                                          | 213 |
| <b>Laboratory Study on Properties of Tire Crumb Rubber Modified Bituminous Mixture</b>                          |     |
| Y.M. Dong and Y.Q. Tan                                                                                          | 219 |
| <b>Carbon Fibre/Silicon Composite Sensors for Concrete Structural Health Monitoring in Compression</b>          |     |
| L.L. Yang, Y.Q. Zhang, Y. Ge, Q.H. Zhu and C. Zhang                                                             | 224 |
| <b>Investigation of the Responses of Asphalt Pavement Structure Considering Load - Poisson's Ratio Relation</b> |     |
| L. Zhang, Y.Q. Tan, Y.J. Ou and X.B. Gong                                                                       | 230 |

|                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Freeze-Thaw Resistance of Concrete Control Structure for Debris Flow on Tianshan Highway</b>                  |     |
| Y. Huang, H.N. Xu and H.K. Chen                                                                                      | 238 |
| <b>Dynamic Characteristics of Rubber Powder Modified Cement Asphalt Mortar</b>                                       |     |
| Y.L. Li, Y.J. Ou, Y.Q. Tan and M.Y. Lu                                                                               | 243 |
| <b>The Research on Equipment for Detecting Strength of Shallow Asphalt Pavement under Ice Frozen</b>                 |     |
| M.C. Zhao, L. Ji and S.X. Gao                                                                                        | 247 |
| <b>Experimental Study on Factors Affecting Interlayer Shear Strength of Fiber Seal</b>                               |     |
| P. Cao, D.C. Feng, C.W. Gong and Y. Zhao                                                                             | 253 |
| <b>Mechanics and Pavement Properties Research of Nanomaterial Modified Asphalt</b>                                   |     |
| S.J. Chen and X.N. Zhang                                                                                             | 259 |
| <b>Site Monitoring on Temperature Field Distribution of Asphalt Pavement in Seasonal Frozen Soil Region</b>          |     |
| H.Y. Ma, D.C. Feng and R.X. Jing                                                                                     | 265 |
| <b>The Analysis, Discussion and Suggestions for the Mesh Reinforcement Technique of Polymer Mortar Wire Rope</b>     |     |
| S.R. Zhang and Z.L. Li                                                                                               | 271 |
| <b>Load Transfer Characteristics and Durability Study of GFRP Dowels in Jointed Concrete Pavement</b>                |     |
| L.K. Li, Y.Q. Tan, X.B. Gong and Y.L. Li                                                                             | 277 |
| <b>Effect of Styrene Butadiene Rubber Latex on Mortar and Concrete Properties</b>                                    |     |
| S.Y. Yao and Y. Ge                                                                                                   | 283 |
| <b>The Influence of Admixtures on Vibration Viscosity Coefficient of Pavement Concrete</b>                           |     |
| J.S. Yu, X.P. Cai, Y. Ge and Z.G. Wu                                                                                 | 289 |
| <b>The Research on Tests for Detecting Strength of Shallow Asphalt Pavement under Ice Frozen</b>                     |     |
| M.C. Zhao, S.X. Gao, D.W. Shi and Q.S. Huang                                                                         | 293 |
| <b>Compacting Properties of Zeolite Based Warm Asphalt Mixture</b>                                                   |     |
