## Preface, Committees

## Chapter 1: Waste Storage and Recycling

|                                                                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>The Properties of Material from Recovered TetraPak Beverage Cartons</b><br>H. Raclavská, H. Škrobánková, P. Pavlík and V. Sassmanová                            | 3  |
| <b>Waste Building Materials to Roads in Czech Republic</b><br>D. Stehlík, P. Hyzl and M. Varaus                                                                    | 10 |
| <b>Emission Production from the Incineration of Municipal Waste and Coal in Heat Sources for Solid Fuel</b><br>M. Vantúch, J. Jandačka and A. Čaja                 | 18 |
| <b>Influence of Refused Glass on Thermal Properties of Municipal Waste</b><br>K. Žurková, K. Kryštofová, H. Raclavská and H. Škrobánková                           | 23 |
| <b>Problems with Solidification of Fly Ashes from the Municipal Solid Waste Incineration</b><br>A. Miškuřová, A. Medvecová, A. Kochmanová, D. Olčák and V. Hronský | 31 |
| <b>Recovery of Copper and Tin from Used Printed Circuit Boards</b><br>T. Havlík, D. Oráč, J. Jaščišák, A. Miškuřová and H. Horváthová                              | 39 |

## Chapter 2: Biomass and Energy Production

|                                                                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Steam Biomass Gasification - Effect of Temperature</b><br>M. Baláš, M. Lisý and J. Pospíšil                                                                                        | 49  |
| <b>Biogas Production Using Anaerobic Digestion of Industrial Waste</b><br>J. Gaduš, T. Gierl and V. Kažimírová                                                                        | 55  |
| <b>The Energy Potential of Municipal Waste in the Žilina Region</b><br>M. Holubčík, A. Čaja, J. Jandačka and M. Jobb                                                                  | 63  |
| <b>Economics of Biomass Kiln-Drying with Vortec Tube</b><br>L. Kolláth, M. Capek and I. Onderová                                                                                      | 69  |
| <b>Interaction between Technological and Material Parameters during Densification of Selected Types of Herbaceous Biomass</b><br>P. Križan, M. Matúš, J. Beniák and M. Svátek         | 79  |
| <b>The Effectiveness Criterion for Densification of Wood Waste</b><br>M. Matúš, P. Križan and J. Beniák                                                                               | 89  |
| <b>Design of the Reactor for the Partial Oxidation of the Pyrolysis Gas Using the Mathematical Modeling</b><br>J. Minář, S. Honus, P. Pavlík, O. Němček, J. Frantík and V. Sassmanová | 95  |
| <b>Estimation and Measurement of Heat from Municipal Landfills</b><br>J. Várfalvi, J. Kontra, J. Takács and M. Krajčík                                                                | 103 |
| <b>Use of Biomass and Waste for Energy Purposes</b><br>P. Tonhauzer and M. Morvova                                                                                                    | 109 |
| <b>Diagnostic Measurement of Boiler Efficiency during the Combustion of Biofuels</b><br>T. Výtisk and R. Janalík                                                                      | 115 |
| <b>Using of Ferrous Chloride in Anaerobic Digestion of a Substrate with High Sulphur Content</b><br>M. Hutňan, J.J. Chávez-Fuentes and M. Czölderová                                  | 122 |

## Chapter 3: Pollution and Techniques of Environmental Protection

|                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>SO<sub>2</sub> Measurement with Sorption - Cumulative and Ultraviolet Fluorescent Method near Nováky Power Plant</b><br>J. Pokrývková, J. Fuska and V. Bárek | 131 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Residual Toluene Concentrations in Exhaust Gas Waste Stream of Motor Vehicle</b><br>D. Adamovic, M. Vojinovic-Miloradov, M. Miloradov, J. Doric, S. Adamovic, J. Radonic and M. Turk-Sekulic | 137 |
| <b>Environmentally Progressive Road Traffic Noise Reducing Devices and Materials</b><br>M. Decky, M. Kováč and E. Remišová                                                                      | 144 |
| <b>Biodegradable Polymers for the Production of Prototypes</b><br>J. Beniák, M. Matúš and P. Križan                                                                                             | 152 |
| <b>Measurement Technique for the Flood Barriers Deformation Determination</b><br>T. Kopunec, M. Vajsábel, P. Pavlásek, M. Koval, S. Ďuriš and Ľ. Šooš                                           | 159 |
| <b>Development of a Modular Flood Barrier Concept Made from Recycled Plastic</b><br>Ľ. Šooš, J. Ondruška, P. Kovač and V. Čačko                                                                 | 168 |

## **Chapter 4: Machines and Equipment for Environmental Engineering and Energy Production**

|                                                                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Research into a New Method for Trimming Hooves by Liquid Jet</b><br>V. Čačko, J. Ondruška, I. Onderová, Ľ. Šooš and Z. Krajný                                          | 177 |
| <b>Production Stainless Gravitational Heat Pipes Filled with Distilled Water</b><br>M. Jobb, Ľ. Kosa, M. Holubčík and R. Nosek                                            | 184 |
| <b>Gravitation Heat Pipe and Influence of Working Conditions</b><br>Ľ. Kosa, M. Jobb, P. Nemec and M. Malcho                                                              | 192 |
| <b>Influence of Underpressure on Heat Transfer and Temperature Field at Sprinkled Tube Bundle</b><br>P. Kracík and J. Pospíšil                                            | 200 |
| <b>Change of Operation Parameters of Waste Incinerator by Formation of Deposits</b><br>J. Moskalík                                                                        | 207 |
| <b>Feedback FEM Analysis to the Material Properties in the Simulation of Radial Pressure in the Cylindrical Chamber</b><br>J. Ondruška, Ľ. Šooš, I. Onderová and V. Čačko | 213 |
| <b>Numerical Study of Air Distribution in Combustion Chamber</b><br>M. Špilaček, M. Lisý and Z. Skala                                                                     | 218 |
| <b>Pressing Technologies for ELVs</b><br>M. Štefanka, Ľ. Šooš, V. Čačko and J. Ondruška                                                                                   | 224 |
| <b>Optimization of Secondary Air Distribution in Biomass Boiler by CFD Analysis</b><br>M. Lisý, J. Pospíšil, O. Štelcl and M. Špilaček                                    | 231 |
