

# Table of Contents

## Preface

## Chapter 1: Energy Efficient Buildings

|   |    |
|---|----|
| <b>Analysis of Energy and Internal Environment Improvements in a Single Family House</b><br>M. Kamenský, A. Vaskova and M. Vertal'  | 3  |
| <b>Application of BIM Process by the Evaluation of Building Energy Sustainability</b><br>M. Jašek, J. Česelský, P. Vlček, M. Černíková and E.W. Berankova   | 7  |
| <b>Comparison of Simulated and Actual Energy Use of a Hospital Building in Austria</b><br>N. Saipi, M. Schuss, U. Pont and A. Mahdavi   | 11 |
| <b>Energy Consumption and CO<sub>2</sub> Emission of Buildings Built with Industrialized Technology: The Case of Debrecen and Future Trends</b><br>T. Csoknyai                                    | 16 |
| <b>Evaluation of Energy Efficiency in Retrofitting Residential Buildings with Large-Panel Structures</b><br>E. Megyesi and M. Brumaru   | 24 |
| <b>Exergy Quality of Buildings</b><br>F. Kalmár   | 30 |
| <b>Indoor Environment and Energy Performance of Office Buildings Equipped with a Low Temperature Heating / High Temperature Cooling System</b><br>D. Petráš, M. Krajčík, J. Bugán and E. Ďurišová | 36 |
| <b>House in Passive Standard - Thermal Bridges</b><br>M. Palko  | 42 |
| <b>Interaction of New Physical-Energy Quantification of Buildings and Renewable Energy Sources as a Dominant Production Technology of Natural Capital</b><br>M. Bielek, B. Bielek and J. Hřeš     | 46 |
| <b>Nearly Zero-Energy Requirements and the Reference Buildings</b><br>A. Zöld and Z. Szalay   | 52 |
| <b>The Effects of the Soils Thermal Field onto the Energy Performance of Buildings</b><br>P. Kacálek, T. Petricek and R. Smolka   | 58 |
| <b>Thermal Bridges Minimizing through Typical Details in Low Energy Designing</b><br>R. Ingeli, B. Vavrovič and M. Čekon  | 62 |
| <b>Thermal Bridges Minimizing through Window Jamb in Low Energy Buildings</b><br>R. Ingeli, B. Vavrovič, M. Čekon and L. Paulovičová  | 66 |
| <b>Thermal Comfort in a Refurbished Low-Energy House: The OEKOHAUS Case Study</b><br>L. Skoruppa, U. Pont, M. Schuss and A. Mahdavi   | 70 |
| <b>Total Solar Energy Transmittance vs. Dynamic Thermal Characteristics of Non-Transparent Building Components</b><br>R. Rabenseifer  | 77 |
| <b>Transformation Determinants of Existing Urban Hotels while Taking into Account all Aspects of Sustainable Development</b><br>Z. Tóthová  | 83 |
| <b>Cost Optimality and/or Sustainability in our Building's Life</b><br>K. Severnyak   | 87 |
| <b>Optimization of Building Envelope Components Based on Life Cycle Environmental Impacts and Costs</b><br>P. Medgyasszay and Z. Szalay   | 93 |
| <b>Building Sector &amp; Climate Change: The Case of Hungary</b><br>A. Talamon  | 99 |

## Chapter 2: Heat Storage and Energy Savings

|   |     |
|---|-----|
| <b>Alternative Way of Thermal Protection by Thermal Barrier</b><br>M. Doležel   | 107 |
| <b>Determination of Linear Thermal Transmittance for Curved Detail</b><br>F. Vlach and P. Jelínek   | 112 |
| <b>Determining Cumulative Room Temperature under <i>In Situ</i> Conditions Using Combined Method</b><br>M. Flimel   | 116 |
| <b>Energy Design by Evolution: Applying Evolutionary Computing to Energy Efficient Architectural Design</b><br>B. Sommer and U. Pont  | 120 |
| <b>Experimental Measurements and Numerical Simulations of Dynamic Thermal Performance of External Timber Frame Wall</b><br>I. Skotnicova, Z. Galda, P. Tymova and L. Lausova                      | 126 |
| <b>Hot Water Temperature Drop in a Pipe as a Parameter in Order to Define Operation Time of a Circulation Loop in Domestic Hot Water Distribution System</b><br>K. Knizova and M. Kovac           | 131 |
| <b>Impact of Facade Colouring on Temperature and Light Conditions of Buildings, Housing Estates, and Environment</b><br>J. Pašek and D. Bošová  | 135 |
| <b>Improvements of Energy Balance of Existing Residential Buildings</b><br>M. Budiaková   | 139 |
| <b>Low Energy Source Synthetic Thermal Energy Storage (STES)</b><br>V. Sipkova, J. Labudek and O. Galas   | 143 |
| <b>Numerical Analysis and Measurement Results of a Window Sill</b><br>D. Katunský, M. Zozulák, K. Kondáš and J. Šimiček   | 147 |
| <b>Optimization of Swimming Pool Hall's Envelope with Respect to Thermal and Moisture Design</b><br>P. Jelínek, J. Krupicová and T. Petricek  | 151 |
| <b>Possibilities of Simulations in the Planning of the Retrofit of Historical Double Skin Windows</b><br>D. Bakonyi and G. Becker   | 155 |
| <b>The Impact of the Choice of Computational Methods on the Results of Simulations of Specific Heat Consumption for Heating a Family House</b><br>L. Šteffek, P. Jelínek, J. Kalánek and M. Ostrý | 161 |
| <b>The Influence of Construction Fillings of Building on Airtightness</b><br>M. Kraus and D. Kubečková  | 166 |
| <b>The Influence of the Position of Windows on <math>\Delta U</math> Value</b><br>R. Mend'an and M. Pavčeková   | 170 |
| <b>The Natural Physical Cavity Energy Regime of Double-Skin Facade</b><br>B. Bielek, M. Bielek and D. Szabó   | 174 |
| <b>Thermal and Moisture Problems of Wooden Windows</b><br>A. Palková and M. Palko   | 180 |
| <b>Windows in Buildings - Diagnostics of Selected Properties after Time of Using</b><br>P. Oravec   | 184 |
| <b>Wooden Window Structure and its Thermo-Humid Mode</b><br>L. Kamenický  | 188 |
| <b>Thermal Properties of Wooden Buildings in Relation to Computer Software</b><br>L. Kučerová, M. Černíková and B. Hrubá  | 193 |

### **Chapter 3: Integration of Renewable Energy Sources**

|  |     |
|--|-----|
| <b>A Software Optimization of the Solar Energy System Performance</b><br>L. Skalík and O. Lulkovičová                          | 199 |
| <b>Comparison of Modelled Distribution of Thermal Fields at Seasonal Ground Storage Segments</b><br>R. Partika and M. Kalousek | 205 |

|  |     |
|--|-----|
| <b>Construction in the Trend of Sustainability_ Wooden Houses with Integrated Photovoltaic Systems</b> |     |
| E. Oravcová  | 209 |
| <b>Electricity Storage in Passive House in Central Europe Region</b>                                   |     |
| L. Chuchma and M. Kalousek   | 213 |
| <b>Evaluation of Possible Use of Foliage as a Fuel for Small Combustion Equipment</b>                  |     |
| L. Martiník, V. Drastichová, J. Horák, Z. Jankovská and P. Kubesa                                      | 218 |
| <b>Photovoltaic Arrays on Flat Roofs – An Aspect of Yearly Energy Production</b>                       |     |
| A. Zöld and M. Seprődi-Egeresi   | 222 |

## **Chapter 4: Effective Ventilation**

|   |     |
|---|-----|
| <b>A New Type of Heat Exchanger for Ventilation in Buildings with Nearly-Zero Energy Consumption</b>                        |     |
| P. Horák, A. Pavel and I. Ambrožová   | 231 |
| <b>CFD Model of an Underfloor Air Cavity Created from Special Fittings and its Verification Using a Laboratory Model</b>    |     |
| T. Renčko and A. Sedláková  | 235 |
| <b>Comparison of the Impact of the Ventilation Ducts on Thermal Properties of the Exterior Walls</b>                        |     |
| H. Sevcikova, E. Rykalová and R. Fabian   | 241 |
| <b>Experimental Verification of Air Quality in Primary Schools</b>  |     |
| M. Javorček   | 245 |
| <b>Impact of the Installed Inlet Vent Flaps in the Window Structure on the Overall Aerodynamic Properties of the Window</b> |     |
| V. Majšniar, B. Bielek and D. Szabó   | 250 |
| <b>Natural Ventilation and Forced Warm Air Ventilation in Offices</b>   |     |
| M. Budiaková  | 256 |
| <b>The Effect of Air Condition on Reduction of CO<sub>2</sub> Concentration in Buildings in Family Houses</b>               |     |
| L. Michnová, M. Černíková and B. Hrubá  | 260 |

## **Chapter 5: Quality of Indoor Environment**

|   |     |
|---|-----|
| <b>Analysis of Summer Overheating in Elementary School Building</b>   |     |
| M. Kamenský, M. Lopusniak and D. Katunský   | 269 |
| <b>Architecture and the Internal Environment in the Current Office Buildings - Environmental Aspects</b>              |     |
| P. Nahálka  | 273 |
| <b>Case Study of Light Pollution in Urbanized Area of Slovakia</b>  |     |
| P. Fulop, P. Hanuliak and L. Mankova  | 277 |
| <b>Colour of External Shading Obstacles and Circadian Stimulus of Indoor Daylighting</b>                              |     |
| J. Hraška and P. Hartman  | 283 |
| <b>Comparative Study of Window Glazing Systems Influence on Melatonin Secretion in Patients in the Hospital Wards</b> |     |
| J. Hraška, P. Hanuliak, P. Hartman, M. Zeman and K. Stebelová   | 288 |
| <b>Design as a Tool for Environmental Therapy in the Fight against Lifestyle Diseases</b>                             |     |
| A. Hofbauerová  | 294 |
| <b>Design of Balcony from the Point of View of Daylighting</b>  |     |
| L. Gábrová  | 298 |
| <b>Design of School Environment in the 21st Century</b>   |     |
| D. Končerková and L. Rollová  | 302 |
| <b>EN Criteria for Evaluation of Daylight in Interiors</b>  |     |
| S. Darula, R. Kittler and M. Malikova   | 307 |
| <b>Evaluation of Thermal Environment and Indoor Air Quality in University Libraries in Vienna</b>                     |     |
| G. Adam, U. Pont and A. Mahdavi   | 315 |

|  |     |
|--|-----|
| <b>Impact of the New CEN Minimum Illuminance Criterion on the Working Plane Size</b><br>M. Fabian and S. Darula                | 321 |
| <b>Influence of Instantaneous Measured Data on Evaluation Interval of Daylighting</b><br>L. Janečková, S. Darula and D. Bošová | 328 |
| <b>Interior Environment of the Buildings Hit by Floods</b><br>J. Pašek, T. Tribulová and J. Frankl                             | 332 |
| <b>Shading by Surrounding Obstacles</b><br>M. Hlásková   | 338 |
| <b>Sunlight Penetration through Sloped Window Apertures</b><br>K. Kondáš, S. Darula and M. Zozulák                             | 342 |
| <b>Thermal Stability of the Summer Period in Schoolrooms</b><br>I. Svatošová and L. Michnová                                   | 346 |
| <b>Assessment of Daylighting Design Tools Against Test Cases Included in CIE's 171:2006 Report</b><br>F. Vajkay and L. Zizka   | 352 |
| <b>Exploring the Contact Comfort within Complex Well-Being in Microenvironment</b><br>V. Kotradyová and A. Teischinger         | 356 |

## **Chapter 6: Natural and Environmental Friendly Building Materials**

|   |     |
|---|-----|
| <b>Air-Tightness and Acoustic Properties of SuperAdobe System</b><br>J. Teslík, N. Zdražilová and M. Vodičková  | 365 |
| <b>Building Physical, Energetical and Hygrothermal Analysis of Earth-Sheltered Building Constructions</b><br>A. Dudás and L. Farkas   | 369 |
| <b>Calculation and Experimental Evaluation of the Thermal Resistance of a Structure with Reflective Insulation</b><br>J. Kalánek, L. Šteffek and M. Ostrý                         | 374 |
| <b>Comparison of the Thermal Properties of Different Insulating Materials</b><br>A. Lakatos   | 381 |
| <b>Controlling and Testing of the Uneven Wall Surface</b><br>M. Nič and J. Nováčiková   | 387 |
| <b>Correlation Relationships between Properties of Brick Body and their Use in Building Practice</b><br>M. Šveda and R. Sokolař   | 393 |
| <b>Impact of Concrete Recycled Materials on some Properties of Concrete</b><br>M. Ledererová  | 399 |
| <b>Improving the Thermal Insulation Properties of Brick Products Using Chemical Additive Vuppor</b><br>M. Šveda   | 403 |
| <b>Influence of Fluidized Fly Ash on the Selected Physical-Mechanical Properties of the Autoclaved Aerated Concrete</b><br>A. Struhárová, S. Unčík, S. Balkovic and M. Hlavinková | 409 |
| <b>Microclimatic Effects of Green Facades in Urban Environment</b><br>F. Szkordilis   | 415 |
| <b>Microorganism on the Fasades of Residential Panel Housing</b><br>D. Kubečková  | 421 |
| <b>Possibilities of Thermal Analysis for the Evaluation of Construction Materials</b><br>P. Mec, T. Murínová and K. Kubečka   | 425 |
| <b>Risk Analysis of Asbestos Structures and their Impact on the Internal Environment of Buildings</b><br>P. Vlček, K. Kubečka, H. Vaculikova, D. Kubečková and V. Sojkova         | 431 |
| <b>Study of the Properties of the Environmentally Friendly Insulation Materials</b><br>J. Zach and J. Hroudová  | 435 |
| <b>The Assessment of the Refurbished Reinforced Concrete Buildings in Point of the Climate Change</b><br>S. Hrabovszky-Horváth  | 440 |

|   |     |
|---|-----|
| <b>The Transition of the Water Steam through the Composition of the Diffusive Closed Circumferential Wall of the Wooden House with the Proper and Improper Realization of Vapor Barrier</b> |     |
| M. Uvizlová and T. Bečkovská  | 446 |
| <b>Thermal Properties of Selected Lightweight Wooden Walls and Windows in the Regime of Long Time Testing</b>   |     |
| P. Ďurica, M. Ďuriníková, R. Ponechal, D. Štaffenová and M. Štůňová   | 450 |
| <b>Timber as Renewable Building Material and its Use in Modern Architecture</b>   |     |
| P. Korček   | 457 |
| <b>Timber - Traditional Material History or Vision in Architectural Design</b>  |     |
| T. Varga and P. Pauliny   | 460 |
| <b>Transient Pulse Method for Measuring of Heat Conductivity of Autoclaved Aerated Concrete</b>   |     |
| M. Vertaľ, D. Katunský and J. Šimiček   | 466 |
| <b>Ultra Thin Glass Membranes for Advanced Glazing of nZEB</b>  |     |
| I. Chmúrny  | 470 |
| <b>Use of Multi-Criteria Optimization for Selection of Building Materials for Reconstruction</b>  |     |
| M. Haliřová and E. Rykalová   | 474 |
| <b>Application of Phase Change Materials to Reduce the Risk of Overheating of Building Interior</b>   |     |
| T. Klubal, M. Ostrý and R. Brzoň  | 479 |

## Chapter 7: Acoustic Design and Noise Protection

|  |     |
|--|-----|
| <b>Door Bottom Joint Design and its Influence on Sound Transmission of the Door</b>  |     |
| D. Dlhý and K. Minarovičová  | 487 |
| <b>Effect of Acoustic Pads' Different Dynamic Stiffness on the Reduction of Impact Sound Level</b>   |     |
| L. Autratová and P. Hlavsa   | 491 |
| <b>Influence of Double Transparent Facades on Acoustic Comfort at the Workplace</b>  |     |
| D. Urbán, D. Dlhý, P. Tomašovič and P. Zat'ko  | 495 |
| <b>Mockup Investigation of Lightweight Timber Floor</b>  |     |
| J. Medved', B. Ingeleare and L. de Geetere   | 499 |
| <b>Simulation of Different Acoustic Lecture Room Designs</b>   |     |
| K. Komínková, M. Papranec and L. Šteffek   | 505 |
| <b>Sound Insulation Properties of the Facade Elements - The Influence of Filling Cavities of Facade Elements on the Values of Laboratory Airborne Sound Insulation</b> |     |
| Z. Kolářová and L. Kalousek  | 509 |
| <b>The Dispersion of Acoustic Energy in the Dissemination from the Source</b>  |     |
| D. Dlhý and A. Pernišová   | 513 |
| <b>The Assessment of Sports Halls – The Analysis of Reverberation Time, Strength and Clarity</b>   |     |
| M. Jedovnický and P. Tomašovič   | 517 |

## Chapter 8: Fire Protection, Risk Analysis

|   |     |
|---|-----|
| <b>A Case Study of the Fire-Resistance of Traditional Brick Vaults</b>                |     |
| M. Fehér and G. Dobszay   | 525 |
| <b>Application of Risk Analysis by the Evaluation of Buildings Indoor Environment</b> |     |
| H. Vaculíková, P. Vlček, K. Kubečka, J. Česelský and M. Nič                           | 531 |
| <b>Assessment and Damage for Building Structures Risk Analysis Methods</b>            |     |
| K. Kubečka, P. Vlček and D. Kubečková   | 535 |
| <b>Effects of Smoke on Evacuation</b>   |     |
| M. Lopusniak  | 539 |
| <b>Fire Protection Aspects of Low-Energy Buildings</b>                                |     |
| L.G. Takács   | 543 |
| <b>Fire Risk in Relation to BIM</b>   |     |
| J. Fridrich and K. Kubečka  | 552 |

|  |     |
|--|-----|
| <b>Instruments for Risk Analysis as an Alternative Decision-Making Method in the Forensic Sciences</b> |     |
| K. Kubečka, S. Dobiášová, J. Fridrich, P. Vlček and M. Nič   | 556 |
| <b>Internal Surface Temperatures Short-Term Measurement in the Selected Living Room with Fireplace</b> |     |
| R. Ponechal  | 560 |
| <b>Risk Analysis of Steel Construction Projects Documentation Blast Furnaces</b>                       |     |
| S. Dobiášová and K. Kubečka  | 564 |
| <b>Utilization of Risk Analysis Methods in Decision-Making Process on Fitness of Rehabilitation</b>    |     |
| K. Kubečka, P. Vlček, D. Kubečková and D. Pieszka  | 568 |

## **Chapter 9: Information Technologies in Building**

|   |     |
|---|-----|
| <b>BRESET - Remote Sensing Technology for Building Physics Research of Structures</b>   |     |
| D. Bečkovský and F. Vajkay  | 575 |
| <b>BIM - The Process of Modern Civil Engineering</b>  |     |
| J. Fridrich and K. Kubečka  | 579 |
| <b>Possibilities and Problems in Applying Decision Support Systems for Special Challenges in the Design of Building Constructions</b> |     |
| G. Kapovits and G. Dobszay  | 583 |
| <b>SEMERGY: Performance-Guided Building Design and Refurbishment within a Semantically Augmented Optimization Environment</b>         |     |
| D. Włosiuk, N. Ghaissi, U. Pont, F. Shayeganfar, A. Mahdavi, S. Fenz, J. Heurix, A. Anjomshoaa and A.M. Tjoa                          | 589 |

## **Chapter 10: Sustainable Development and Project Management in Building**

|  |     |
|--|-----|
| <b>An Expert System for the Cost-Optimal Refurbishment of Buildings</b>                                    |     |
| A. Csik  | 599 |
| <b>Multi-Purpose Utilisation of Historic Building Glass Atrium — Case Study of the Slovak Philharmonic</b> |     |
| B. Polomová, A. Vargová, V. Chmelík and D. Urbán   | 605 |
| <b>The Concept of Minimalism in Sustainable Residential Buildings</b>                                      |     |
| E. Selcová   | 611 |
| <b>The Idea of Modularity and Small Prefabrication of Low-Cost Housing Concepts</b>                        |     |
| D. Mikušková   | 615 |
| <b>Utilization of the Construction Waste</b>   |     |
| K. Prokopčáková and L. Prokopčák   | 619 |
