## Preface and Organizing Committee

## Chapter 1: Material Science and Applications

|                                                                                                                                                                                                           |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Photoanode of Photoelectrochemical Biofuel Cell Sensitized by Magnesium Tetraphenylporphyrin</b><br>K.Q. Wang, W.L. Wang, Q.F. Zhu and H.X. Yang                                                       | 3  |
| <b>Synthesis of Straight Rod-Shaped Mesoporous Silica Templated with Polyvinylpyrrolidone and P123 for Controlled Ibuprofen Release</b><br>J.Y. Zhang, B. Jiang and G.W. Zhou                             | 7  |
| <b>Cetyltrimethylammonium Bromide-Assisted Hydrothermal Synthesis of Mixed-Phase TiO<sub>2</sub> Nanorod and its Photocatalytic Activity</b><br>B. Sun, X.L. Xu and G.W. Zhou                             | 12 |
| <b>Hydrothermal Synthesis and Photocatalytic Activity of Mesoporous TiO<sub>2</sub> with High Surface Area and Different Pore Size</b><br>F.J. Chen, Z.S. Bu and G.W. Zhou                                | 17 |
| <b>The Estimation of Thermal Conductivity for Alumina-Epoxy Composite Material with High Filling Volume Fraction</b><br>C.K. Huang and Y.C. Leong                                                         | 21 |
| <b>Study of N-TiO<sub>2</sub> Photocatalysts and their Catalytic Activities under Simulated Sunlight</b><br>S.J. Wang, L.L. Wang and W.Y. Zhang                                                           | 27 |
| <b>Study on Biomaterials of Anti-Gastric Trametenolic Acid B Semi-Synthetic Derivatives</b><br>X.M. Yan, M.R. Ding, M.G. Liu, J.Z. Wang and N.Y. Huang                                                    | 32 |
| <b>The Formation of Cooper Pairs and their Role in Nondissipative Diamagnetic Currents in the Micro- and Macro-Scopic Sized Graphene Materials; Towards High-Temperature Superconductivity</b><br>T. Kato | 36 |
| <b>Optical Properties of Black Silicon Using the Combination Method of KOH and Gold-Assisted HF Etching</b><br>G.D. Zhao, X.H. Zhu, Y. Yu and X.L. Zheng                                                  | 42 |
| <b>Formula Design of Corrosion-Resistant Concrete under Sulfate-Chloride Compound Attack</b><br>C. Zeng, D.X. Hao and R. Chen                                                                             | 47 |
| <b>Development and Application of Nanotechnology in Sports</b><br>P. Wang and J.Y. Wang                                                                                                                   | 54 |
| <b>Effects of Nitrogen Doping on Nanocrystalline Diamond/p-Type Si toward Solar Cell Applications</b><br>C.R. Lin, D.H. Wei and M.K. Bendao                                                               | 59 |

## Chapter 2: Mechanical Engineering

|                                                                                                                                                                                         |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Support Vehicles Allocation Method Set Based on Feature</b><br>Y.T. Yu and Y. Ding                                                                                                   | 67 |
| <b>Applying of Piston Mechanism Design Used in the Wavelength Electrical Generating of Ocean for Fishing Communities</b><br>Hendra, A. Indriani and Hernadewita                         | 73 |
| <b>Design of Self-Alignment Devices with Fluidic Self-Assembly for Flip Chip Packages in Batch Processing</b><br>T.L. Chang, C.F. Chang, Y.W. Lee, C.H. Cheng, C.Y. Chou and M.C. Huang | 79 |
| <b>Application Topsis Analysis on Aviation Anti-Submarine Aircraft Performance Evaluation</b><br>M.H. Yang, G.G. Wang, L. Zhang, X.P. Han and T. Liang                                  | 84 |
| <b>Systematic Planning and Design of a System to Facilitate the Adjustment of Grain Transport Vanes in a Combine Harvester</b><br>M.A. de Carvalho and F.B. Ramina                      | 89 |

|                                                                                                                                                                                    |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Finite Element Analysis on the Structure Strength of Air Cushion Vehicle</b><br>N. Liu, H.L. Ren, J.Z. Li and L.H. Jia                                                          | 95  |
| <b>Chinese Electric Vehicles (EVs) and Internal Combustion Engine Vehicles (ICEVs)<br/>Prediction Based on the Double Species Model</b><br>S.J. Fu                                 | 101 |
| <b>An Experimental Study of Low-Frequency Vibration-Based Electromagnetic Energy<br/>Harvesters Used while Walking</b><br>M.C. Chiu, Y.C. Chang, L.J. Yeh, C.H. Chung and C.H. Chu | 106 |
| <b>Training Mode of China Professional Golf Player</b><br>X.Y. Shao                                                                                                                | 115 |
| <b>Life Cycle Assessment of Battery Electric Vehicles (BEVs) Using eBlance</b><br>Z. Liu and W.H. Zeng                                                                             | 121 |

### **Chapter 3: Power, Energy and Environment Engineering**

|                                                                                                                                                             |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Optimization Methods Based on Big Data Technologies of Power System Protection</b><br>H.R. Xue, B. Li, K. Ji, Z.Q. Wang and X.J. Kong                | 129 |
| <b>Model Predictions for New Iron Ore Sintering Process Technology Based on Biomass and<br/>Gaseous Fuels</b><br>J.A. de Castro                             | 136 |
| <b>Bioconversion of Water Hyacinth to Ethanol by Using Cellulase from <i>Trichoderma<br/>atroviride</i> AD-130</b><br>R. Dhankhar, A. Dhaka and Sakshi      | 145 |
| <b>Study on Measures for Solving Accident of Water Distribution System</b><br>W.Z. Wang and J.M. Bian                                                       | 149 |
| <b>A Method of Load Prediction in District-Heating System Based on Data Mining</b><br>L.B. Liu, A.J. Zou and Y.F. Ma                                        | 154 |
| <b>Admittance Elements Comparatively Amplitude Trend Analysis of Thyristor Controlled<br/>Reactor</b><br>W.J. Zheng                                         | 160 |
| <b>Multi-Agent Design for the Micro-Grid Demonstration Project</b><br>I.H. Chou, H.W. Hsiao, C.C. Ma and I.T. Lung                                          | 165 |
| <b>MPPT Control Method Using Boost Type DC-DC Converter for PV Generation System<br/>with Mismatched Modules</b><br>C.Y. Huang, K. Itako, T. Mori and Q. Ge | 171 |
| <b>Very-Short-Term Load Forecast for Individual Household Based on Behavior Pattern<br/>Induction</b><br>Y.H. Hsiao                                         | 177 |
| <b>A Probabilistic Optimal Power Flow Calculation Method with Latin Hypercube Sampling</b><br>J.Q. Zhao, C.L. Zhang, W.H. Luo and J. Zhao                   | 183 |
| <b>Electro-Thermal Design of Smart Power Devices and Integrated Circuits</b><br>K.O. Petrosyants, I.A. Kharitonov and N.I. Ryabov                           | 191 |
| <b>Simulation of a Low Voltage Grid with Power Generation from Renewable Energy<br/>Resources</b><br>F. Dragomir and O.E. Dragomir                          | 195 |
| <b>Forecasting of Photovoltaic Power Generation by RBF Neural Networks</b><br>F. Dragomir and O.E. Dragomir                                                 | 200 |
| <b>Dynamic Modeling and Identification of an Electric-Hydraulic Controlled Fuel Injection<br/>System</b><br>Y.W. Lee                                        | 206 |
| <b>Life Cycle Assessment of Impacts of PHEVs on GHGs Emissions</b><br>S.Y. Zhou, D.X. Niu and Q. Wang                                                       | 212 |
| <b>Numerical Analysis of Temperature Field of Vertical Frozen Soil Wall Reinforcement at<br/>Shield Shaft</b><br>J. Hu, X.B. Wang and B.R. Jiang            | 218 |

## **Chapter 4: Electronics, Computer Engineering and Information Technology**

|                                                                                                                                                                                 |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Study on Security of Based on Android Third-Party Software Detection</b><br>M.L. Ding                                                                                        | 227 |
| <b>Particle Swarm Optimization for Position Control of Induction Motor</b><br>C.L. Chiang                                                                                       | 231 |
| <b>3D Simulation of Heavy-Ion Induced Charge Collection in Sub-100nm MOS-FETs Using Strained Silicon-Germanium</b><br>B. Zhou, X.C. Wu and M.X. Huo                             | 237 |
| <b>Association Rule Mining Based on Multidimensional Pattern Relations</b><br>Y.K. Chen and T.X. Zhao                                                                           | 243 |
| <b>Electric Energy Information Collection System Based on SOA</b><br>W.P. Su, Z.H. Yan and C.H. Liang                                                                           | 246 |
| <b>Application of 3D Virtual Scene Building Technology Based on OSG in Gas Station Training Simulation System</b><br>J.M. Song, Z.H. Yan and H. Yuan                            | 252 |
| <b>The Study of Trust Evaluation Model Based on Improved AHP and Cloud Model in IoT</b><br>X.Y. Pang and C. Wang                                                                | 258 |
| <b>Study on Optimization of Water Supply Network Topology</b><br>W.Z. Wang and T.Y. Zhang                                                                                       | 264 |
| <b>Implementation and Detection Tests for Countermeasure – Annulled Hardware Trojan on FPGA</b><br>M. Yoshikawa and T. Tukadaira                                                | 268 |
| <b>Mitral Valve <i>Annulus</i> Matching over Time Based on Image Intensities</b><br>W. Zhang, Y.F. Wei, M.H. Wang, Z.Q. Zheng, J.T. Peng and Y.P. Li                            | 274 |
| <b>The Determining of Basic Probability Assignment for D-S Evidential Theory Based on Rough Set</b><br>R. Tian and B.Y. Li                                                      | 278 |
| <b>Robust Optimization Study of Recycling Network for Electronic Waste</b><br>Z. Zhang and H.M. Ma                                                                              | 282 |
| <b>The Research on Intelligent Marking System for Examinations Based on Fuzzy Theory</b><br>Y. Chen                                                                             | 288 |
| <b>A Simple Way to Compute Parameters for Load Balancer in Optical Networks</b><br>C.S. Tsai and S.W. Cho                                                                       | 292 |
| <b>Tree-Structured Parallel Regeneration Based on Regenerating Codes for Multiple Data Losses in Distributed Storage Systems</b><br>P.F. You, Y.X. Peng, Z. Huang and C.J. Wang | 295 |
| <b>Time Series Analysis and Data Prediction: An ECM Neuronal Approach Applied to EUR/USD Currency</b><br>D. Marcek                                                              | 301 |
| <b>A Way to Chips Diagnosis by Short Circuits</b><br>N.V. Kinsht and N.N. Petrun'ko                                                                                             | 307 |
| <b>Low Voltage FGMOS Four Quadrants Analog Multiplier</b><br>J. de la Cruz-Alejo and L. Noe Oliva-Moreno                                                                        | 313 |
| <b>Comparative Studies of Boiling and Electrolysis on Micro Bubble Generation</b><br>W.B. Luo, X.X. Zhang, X. Cui and H.B. Yuan                                                 | 319 |
| <b>The Application of On-Off Regulation in Public Buildings</b><br>L.B. Liu, A.J. Zou, L.X. Ma and Y.M. Liu                                                                     | 325 |
