

Preface

The 2nd International Conference on Technology for Sustainable Development (ICTSD 2021) provided a platform for academic researchers to present the latest research findings and technological innovations overcoming challenges in the new era in human development. The pandemic and climate changes have disrupted various aspects of human life today, hindering or decelerating the effort to achieve sustainable development goals. On the other hand, effective research activity is not an unimportant factor in preventing the influence of destructive phenomena on the development of society.

In this context, the conference held by the Vocational College Universitas Gadjah Mada with the theme "Challenges and Applied Innovations for Accelerating the Sustainable Development Goals" was an important event to solve the tasks set by the time.
