PREFACE

The 4th International Conference on "Smart Materials, Structures and Systems" was held in Montecatini Terme, Italy on June 10-14, 2012 following the previous Symposia on the same topic which were held in Florence in 1994 and 1998 and in Acircale (Sicily) in 2008.

Taking into account the increasing relevance of the field, it was decided to organise again this 4th edition in the form of a separate "Junior" CIMTEC conference structured in several Symposia and Focused Sessions.

Indeed, the intensive research carried out world wide for creating higher forms of materials, structures and systems by providing them with "life" functions, resulted already in a high level of technology readiness with several applications now emerging, which demonstrate smart materials technologies to have matured well beyond the conceptual stage. Widespread use of nanotechnology concepts and tools and the availability of multiscale computational models coupled with the exponential growth of computer capability are fuelling the rate of advancement of the field. This also is increasingly taking advantage from the merging of materials science and engineering from information deriving from a deeper understanding of biological processes and from the highly effective evolutionary solutions created by nature along million years.

About 800 papers have been presented at the ten Symposia and several Focused and Special Sessions included in the conference by authors from over 50 countries with substantial participation from overseas countries. Particularly numerous were the delegates from the Americas and Australasia.

The 10 volumes of the Conference Proceedings collect a selection of the papers presented.

- Volume 1 Adaptive, Active and Multifunctional Smart Materials Systems (co-edited by Yoon-Bong Hahn, Salvatore Iannotta, Andreas Lendlein, Vincenzo Palermo, Shashi Paul, Concita Sibilia, S. Ravi P. Silva, Gopalan Srinivasan)
