## Preface

## Chapter 1: Infrastructure Resilience and Hazards Analysis

|                                                                                                                                                                                                                               |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Application of Seismic Vulnerability Analysis on Building Structures: A Case Study of Al-Wildan Islamic Internasional School Dormitory in Sekarbela District, Mataram</b><br>H. Hakiki, D.S. Agustawijaya and N. Ngudiyono | 3  |
| <b>Uplift Pressure Analysis of the Cijurey DAM Spillway for Enhancing Infrastructure Resilience to Extreme Hydrological Events</b><br>A. Praptawati, S. Marsudi, N.L. Khomsiati and U.M. Lufthansa                            | 11 |

## Chapter 2: Structural Engineering

|                                                                                                                                                                                                           |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Flexural Performance and Cracking Mechanism of Reinforced Concrete Beams with Ground Granulated Blast Furnace Slag and Steel Fiber</b><br>C.A. Putri, A. Amalia and Y. Setiawan                        | 23 |
| <b>Numerical Study of the Strength of Laminated Bamboo Hollow Section Beam and Column Connection Using Glued-In Rod-Steel Box</b><br>N. Salsabihanum, K. Karyadi, E. Santoso, N. Nindyawati and A. Andoko | 33 |
| <b>Energy Dissipation in Laminated Bamboo Hollow Section Beam and Column Connection Using Glued-In Rod and Bracket</b><br>K. Airlangga, K. Karyadi, M. Sulton and N. Nindyawati                           | 45 |
| <b>Finite Element Analysis of CHS Column-to-Baseplate Connections with Various Stiffener Configurations for Column Protection</b><br>D.F. Muhammad, A.F. Handayani and S.F. Nastiti                       | 55 |
| <b>Facade Design Analysis to Reduce the Cooling Load of Ar Rozy Hospital, Probolinggo City, Based on the WWR, AASF and Glass U-Value Aspect</b><br>G.N. Sukma and D. Ariestadi                            | 63 |

## Chapter 3: Road Engineering

|                                                                                                                                                                                                           |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Wind Energy Utilization Strategy to Support Sustainability and Operational Efficiency of Road Projects in Coastal Areas</b><br>N. Diandra, S. Emelia, A. Setiyudin and D. Fajar                        | 75 |
| <b>Comparative Analysis of Bamboo Pile and Sheet Pile Reinforcement for Steep Road Embankments on Narrow Riverbank Sites Using Finite Element Method</b><br>N.L. Khomsiati, I.A. Faisal and A. Praptawati | 87 |

## Chapter 4: Integrated Water Resources Management

|                                                                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Assessment of the Santong River's Consistent Discharge Potential to Meet the Energy Requirements of the Santong Micro Hydro Power Plant in North Lombok Regency</b><br>R. Evayanti, Y. Aprilina and D. Lestari          | 97  |
| <b>Water Quality as an Indicator of Environmental Sanitation in Densely Populated and Less Densely Populated Areas in Sukun District, Malang City</b><br>J.R. Pratiwi, S.H. Tambunan, M.P.P. Rajendra and R.C. Telaumbanua | 107 |
| <b>Evaluation of Clean Water Pipeline Network in Clungup Mangrove Conservation (CMC), Malang Regency</b><br>V.A.K. Dewi, A. Sahrina, H. Masruroh and S.I.D. Ariusta                                                        | 115 |
