

## Table of Contents

|                                                                                                                                  |    |
|----------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Microfiltration Performance of <math>\alpha</math>-Alumina Membrane for Removal of Glycerol from Biodiesel</b>                |    |
| S.P. Kusumocahyo, N.S. Maharani and S. Yusri                                                                                     | 1  |
| <b>Challenges in Syngas Fermentation for Bioethanol Production: Syngas Composition</b>                                           |    |
| R. Mukti, M.T.A.P. Kresnowati and T. Setiadi                                                                                     | 9  |
| <b>Enhance the Growth of <i>Clostridium ljungdahlii</i> Microbial Cells by Modifying the Medium Composition and Trace Metals</b> |    |
| N.A. Istiqomah, G.M. Krista, R. Mukti, M.T.A.P. Kresnowati and T. Setiadi                                                        | 21 |
| <b>Determination of Data Driven Soft Sensors in Dimethyl Ether Production by Reactive Distillation Column</b>                    |    |
| B.H. Bisowarno, P. Ramadhany and T.G.S. Wibowo                                                                                   | 31 |
| <b>Peak Wavelength Mapping of Triangular Reflection in Spherical Colloidal Cluster with Icosahedral Symmetry</b>                 |    |
| R. Ohnuki, Y. Takeoka and S. Yoshioka                                                                                            | 39 |
| <b>Extraction Technology for Manganese Sulfate Solution Purification</b>                                                         |    |
| C.Z. Li, H.Y. Xie and H.X. Jin                                                                                                   | 45 |
| <b>Carbonaceous Catalyst Activated Persulfate for Degradation of Antibiotic Pollutants in Water</b>                              |    |
| C.K. Zhong                                                                                                                       | 57 |
