

Preface

Held in Wuhan, Hubei, China, on November 24-26, 2023, the 9th Annual International Workshop on Materials Science and Engineering (IWMSE 2023) aimed to provide an excellent international platform for all the invited speakers, authors, and participants, and serve not only as an academic forum but rather as a good opportunity to establish business cooperations.

IWMSE 2023 collected up-to-date, comprehensive, and state-of-the-art pieces of knowledge on materials science and engineering. All the accepted papers were rigorously peer-reviewed by at least 2 expert referees. The papers were selected based on originality, clarity, and significance for the conference. We sincerely hope that the conference succeeded in providing a broad overview of the latest research results on related fields and served participants as a platform for academic connection and exchange.

The Technical Program Committee (TPC) members worked hard to provide timely and relevant reviews. We would like to express our sincere gratitude to all the TPC members and organizers for their hard work, precious time, and endeavor in preparing for the conference. Our deepest thanks also go to the volunteers and other staff for their long hours of work and generosity toward the conference. Last but not least, we would like to thank each and every author, speaker, and participant for their great contributions to the success of IWMSE 2023.

IWMSE 2023 Organizing Committee
