

Preface

The book was compiled based on the research results presented at the 2nd International Conference on Civil Engineering and Materials (ICCEM'2024, 13-14 December 2024, Al-Hoceima, Morocco). This conference provided a vital platform for professionals from Morocco and around the world to convene, share research findings, and discuss the latest advancements in civil engineering and materials science.

The presented edition is dedicated to advanced technologies for coastal engineering, urban planning, and territory development, as well as issues in water quality management. The collected articles will be helpful to many researchers and engineers in these areas.
