|                                                                                                                                                                                                  |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Development and Characterization of Sustainable Particles Reinforced AA-7075 Hybrid Metal Matrix Composites</b>                                                                               |     |
| D.V. Praveen, P. Umamaheswarrao, B.R. Sunil, S. Krugon and Y.N. Babu                                                                                                                             | 1   |
| <b>Development of an Algorithm Based on an Artificial Neural Network to Predict the Thermal Profile of Weld Joints of Dissimilar High Strength Steels Using GMAW Process</b>                     |     |
| F. Njock Bayock, M. Yana Yebga, D. Dongho Tsague and P. Kah                                                                                                                                      | 17  |
| <b>Parametric Study of Biogas Upgrading Process Using Thermal Swing Adsorption Technique</b>                                                                                                     |     |
| J.M. Mutunga, H. Ndiritu, M. Hawi and P. Oketch                                                                                                                                                  | 33  |
| <b>Synergistic Effect of Seawater and Volcanic Pumice Powder on the Properties of Sustainable Cement Mortar</b>                                                                                  |     |
| A. Benyahia, M. Salhi, M. SI Ahmed, T. Boubekur, A. Li and A. Boussad                                                                                                                            | 53  |
| <b>Development of an Experimental System for Grey-Water Treatment for Landscape Irrigation Purposes</b>                                                                                          |     |
| M.M. Mahmoud, A.M.H. Elmetwalli, A. Derbala and E.S. Ismail                                                                                                                                      | 69  |
| <b>Performance Evaluation of Solar Water Pumping System for Small-Scale Irrigation in Ethiopia</b>                                                                                               |     |
| M. Tanashu, T. Tadiwos, A. Kassaw, S. Admasu, N. Ezra, T. Long, L. Allen, E.M. Tennyson, S. Stranks, T. Terefe and N. Ejigu                                                                      | 83  |
| <b>Orthogonal Simulation Test for Evaluating Fretting Wear in Low-Speed Diesel Engine Connecting Rods</b>                                                                                        |     |
| W.M.K. Helal, G.X. Wang and Y.P. Su                                                                                                                                                              | 101 |
| <b>Enhancing Control Efficiency in Waste-to-Energy Thermal Power Plants: Radial Basis Function Autoregressive with Exogenous-Based Model Predictive Controller for Steam Boiler Optimization</b> |     |
| T. Terefe, M.G. Agonafer and G.L. Hailu                                                                                                                                                          | 115 |
| <b>Verification of Drone-Acquired Camouflaged Telecommunication Tower Frontal Area Using <i>In Situ</i> Strain and Environmental Measurements</b>                                                |     |
| N.J.H. Grobler and C.E. Ackerman                                                                                                                                                                 | 139 |
