

■ *Special huge thank to our reviewers*

A review of a book is the evaluation of published material, critical appraisal from the viewpoint of the content, and style quality. It may be of the optional size; the length can differ from a single paragraph to a long-read.

Book reviewing is a convenient opportunity for the reviewers of literary periodicals, who usually aim at exposing their studies as well as disclosing their concepts regarding fiction and non-fiction works. Nevertheless, there are some reviews, which summarize the plot. Taking into consideration the reviews of non-fiction works, they are mainly concerned about such issues as usefulness and apprehensibility, as non-fiction researches are presumptive for instructional or informational goals.

Peer-reviews and reviewers are the core of the publishing process.

All researchers obviously face a peer-reviewing process throughout their scientific activity; as authors, while submitting their work to a journal for publication or as reviewers, being invited to evaluate papers by a journal editor. Reviewers, guided by the editors, will decide whether to reject the papers, to accept it, or to ask for the article to be revised.

So, who is a reviewer? The expert in a specific field of science, who publishes his papers, knows a peer-review purpose, experiences with its different ways, has an understanding how to evaluate different sections of an article, has a good constructive criticism, has to find a time to be accessible and to be on time for editors within reviewing. It's a very responsible role.

They are involved in the time-intensive process, as reviewing takes the time of almost writing a new manuscript. Hence, the work is time-taking and requires to put great efforts to make a rigorous analysis, which has an overwhelming influence. The direct result of their important contribution is the content of high quality.

We value and cherish all our reviewers, who helped to create volumes and books for this year, who took this challenge, set the tone for trends, achieved a new top.

Proudly and with pleasure, we want to declare these names, to let all over the world recognize them.
