## Preface

## Chapter 1: Numerical Simulation of Physical and Chemical Processes

|                                                                                                                                                                                        |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Comparative Analysis of Calculation Models of Pulse Tube Thermoacoustic Refrigerator</b><br>S.O. Nekrasova, D.A. Uglov and A. Shimanov                                              | 3  |
| <b>The Study of Inhibition of Atom-Atom Collisions Cascades by Ni-Al (100) Interphase Boundary</b><br>G.M. Poletaev, D. Novoselova, M.D. Starostenkov, V. Tsellermaer and V. Kovalenko | 8  |
| <b>Boundary Value and Optimal Control Problems for Nonlinear Convection-Diffusion-Reaction Equation</b><br>R.V. Brizitskii and Z. Saritskaya                                           | 13 |
| <b>Multiscale Simulation of Cold Axisymmetric Deformation Processes</b><br>D. Konstantinov and A. Korchunov                                                                            | 18 |
| <b>Control Problem for Unsteady Magnetohydrodynamic Flow of Viscous Heat Conducting Fluid</b><br>D. Tereshko                                                                           | 23 |
| <b>Mathematical Modeling of the Technological Process of Residual Stresses Relief in Metals at Low-Temperature Exposure</b><br>M.V. Polonik and E.E. Rogachev                          | 27 |
| <b>Steady Flow of Incompressible Elastic-Plastic Medium in a Spherical Matrix at Variable Loads</b><br>M.V. Polonik and E.E. Rogachev                                                  | 32 |
| <b>Calculation of the Residual Stress Field of the Thin Circular Plate under Unsteady Thermal Action</b><br>E. Dats, S. Mokrin and E. Murashkin                                        | 37 |
| <b>Numerical Analysis of Inverse Extremum Problems for the Nonlinear Nonstationary Diffusion-Reaction Equation</b><br>O.V. Soboleva and A.Y. Fershalov                                 | 42 |
| <b>Pressure Losses of Power-Law Fluid Flow through an Axisymmetric Sudden Contraction</b><br>E. Borzenko, K. Boyarkina and G.R. Shrager                                                | 47 |
| <b>The Mathematical Model of Reflection and Refraction of the Longitudinal Shock Wave at the Interface of Two Nonlinear Elastic Media</b><br>O.V. Dudko and V.I. Shtuka                | 51 |
| <b>Numerical Analysis of 2D Cloaking Problems Using Homogeneous Materials</b><br>G. Alekseev, A. Lobanov and Y. Spivak                                                                 | 56 |
| <b>Analysis on the Applicability of Diffusion Approximation for the Radiative Transfer Equation with Compton Scattering</b><br>I. Yarovenko                                            | 60 |
| <b>Dynamics of Discrete Breathers in the Pt<sub>3</sub>Al Crystal</b><br>P.V. Zakharov, S.V. Dmitriev and M.D. Starostenkov                                                            | 65 |
| <b>Simulation of the Acoustic Field of Antenna Arrays</b><br>I.O. Bolotina, K.G. Kvasnikov, A.A. Steinbrecher, H.M. Kroening and G.E. Osokin                                           | 70 |
| <b>2D Electromagnetic Wave Scattering Problem for Cylindrical Cloak Incorporating PEMC-Layer</b><br>G. Alekseev, O. Dyakonova, A. Lobanov and A. Yu. Fershalov                         | 75 |
| <b>Numerical Approach to Solving Problems of Two-Phase Multicomponent Flow in Porous Medium Based on Finite Volume Method</b><br>D.O. Dil and A.M. Bubenchikov                         | 80 |
| <b>Burning Rate Calculation for a Frozen Nanosized Aluminum Suspension</b><br>V.A. Poryazov, K.M. Moiseeva and A.Y. Krainov                                                            | 85 |
| <b>Boundary Design of Reflection Properties of a Steady-State Complex Heat Transfer Model</b><br>A.Y. Chebotarev and A.E. Kovtanyuk                                                    | 90 |

|                                                                                                                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Numerical Study of Combustion Regimes and Heat Radiation of Cylindrical Porous Burner</b><br>F.S. Palesskiy                                                                                                                    | 94  |
| <b>Optimal Control Problem of Complex Heat Transfer for <math>SP_1</math> Approximation</b><br>A. Sushchenko                                                                                                                      | 99  |
| <b>Numerical Simulation of Melting of Phase Change Material in a Square Cavity with a Heat Source</b><br>N.S. Bondareva and M. Sheremet                                                                                           | 104 |
| <b>The Features of Parallel Program for 3-D Modeling of Dynamic Processes in Porous Objects with Heat-Evolution</b><br>G. Tarasov                                                                                                 | 109 |
| <b>Two Approaches for Simulating the Burning Surface in Gas Dynamics</b><br>L. Minkov, E.R. Shrager and A.E. Kiryushkin                                                                                                           | 114 |
| <b>Phenomenological Modeling of Rheological Properties of Polyetheretherketones Reinforced with High Modulus Carbon in the Machining Process by a Reversible Analysis Method</b><br>A.I. Khaimovich, A.V. Balyakin and N. Galkina | 119 |
| <b>Decay of Low-Barrier Metastable State: Middle Friction</b><br>N.E. Aktaev                                                                                                                                                      | 124 |
| <b>Corrections to Kramers Formula Describing the Decay Rate of a Metastable State</b><br>N.E. Aktaev and K.A. Bannova                                                                                                             | 128 |
| <b>Bending Process Simulation of a Flat Workpiece with Various Cross-Sectional Mechanical Properties with PAM-STAMP 2G</b><br>F. Grechnikov, Y. Gorshkov and Y.A. Erisov                                                          | 133 |
| <b>Identification Method of Blast-Furnace Process Parameters</b><br>L.S. Kazarinov and T. Barbasova                                                                                                                               | 137 |
| <b>Optimality Conditions for Pareto-Optimal Solutions</b><br>V. Gorbunov and E. Sinyukova                                                                                                                                         | 142 |
| <b>Initial Data Forming for Process Simulation in System “Intruder – Physical Protection System”</b><br>A.V. Bukovetskiy, B.P. Stepanov and D.A. Tatarnikov                                                                       | 148 |
| <b>Numerical Modeling of Cyclone Machine for Cleaning Gas Generator Gases</b><br>V.V. Biryuk, A.B. Tsapkova and A. Shimanov                                                                                                       | 153 |
| <b>Simulation of Conditions of Solid Fossil Fuels Formation for Underground Conversion Investigation</b><br>S.M. Martemyanov, A.A. Bukharkin, I.A. Koryashov and O.S. Kvashnina                                                   | 158 |
| <b>Numerical Study of Grain Evolution and Dislocation Density during Asymmetric Rolling of Aluminum Alloy 7075</b><br>A. Pesin, A. Korchunov and D.O. Pustovoytov                                                                 | 162 |
| <b>The End-to-End Computer Simulation of Casting and Subsequent Metal Forming</b><br>Y.A. Erisov, S. Surudin, A. Shlyapugin and F. Grechnikov                                                                                     | 167 |
| <b>Boundary Element Formulation for Numerical Surface Wave Modelling in Poroviscoelasticity</b><br>L.A. Igumnov, S. Litvinchuk, A.A. Belov and A. Ipatov                                                                          | 172 |
| <b>Use of Lagrangian-Eulerian Computing Method for Systems with Phase Change at the Solution of Stefan Boundary Value Problem</b><br>A.S. Ogorodnikov and M.V. Troshin                                                            | 177 |
| <b>Finite Element Modeling of Influence of Roll Form of Vertical Scale Breaker on Decreased Formation of Surface Defects during Roughing Hot Rolling</b><br>A. Pesin and D.O. Pustovoytov                                         | 181 |
| <b>Mathematical Simulation of Cramped Bending of Sheet Parts Using Finite Element Analysis</b><br>E.V. Eskina and E.G. Gromova                                                                                                    | 186 |
| <b>Accounting Viscous Dissipation at Round Tubes Filling</b><br>E. Borzenko, O.Y. Frolov and G.R. Shrager                                                                                                                         | 191 |
| <b>Features of Difference Scheme for the Diffusion-Kinetic Problem of Ion Implantation with Intermetallic Phases Formation</b><br>K. Asfandyar and A.G. Knyazeva                                                                  | 195 |
| <b>Thermal Activated Elements Redistribution between Two-Component Coating and Substrate</b><br>O.N. Kryukova and M. Chepak-Gizbrekht                                                                                             | 200 |

|                                                                                                                                                                                                                                                |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Modifications of the Mathematical Crisher Model for Effective Moduli of Two-Component Elastic Isotropic Composite</b><br>A. Svetashkov, N. Kupriyanov and K. Manabae                                                                        | 206 |
| <b>Solving Unsteady Boundary Value Problems Using Discrete-Analytic Method for Non-Iterative Simulation of Temperature Processes in Time</b><br>V.N. Sidorov and S.M. Matskevich                                                               | 211 |
| <b>Correct Numerical Methods of Analysis of Structural Strength and Stability of High-Rise Panel Buildings - Part 1: Theoretical Foundations of Modelling</b><br>A.M. Belostosky, S.B. Penkovoy, S.V. Scherbina, P.A. Akimov and T.B. Kaytukov | 217 |
| <b>Correct Numerical Methods of Analysis of Structural Strength and Stability of High-Rise Panel Buildings - Part 2: Results of Modelling</b><br>A.M. Belostosky, S.B. Penkovoy, S.V. Scherbina, P.A. Akimov and T.B. Kaytukov                 | 221 |
| <b>Spectral Analysis of Narrow Band Periodic Signals</b><br>V.S. Avramchuk and E.M. Yakovleva                                                                                                                                                  | 225 |
| <b>On Modelling of Creep and Plasticity in a Problem of Viscosimetric Flow of a Material</b><br>A.S. Begun, L.V. Kovtanyuk and A.O. Lemza                                                                                                      | 230 |
| <b>Influence of a Porous Insert on the Fluid Flow inside the Gasifier Shaft</b><br>P.V. Openyshev and M.A. Sheremet                                                                                                                            | 235 |
| <b>Mathematical Simulation of Hydraulic Power Pulse Machine at Matlab</b><br>M.V. Novoseltseva, E.N. Pashkov and I.A. Masson                                                                                                                   | 240 |
| <b>The Numerical Study of a Dropwise Condensation Mode when Cooling Heat Transfer Surfaces</b><br>A.V. Krainov, E.N. Pashkov, R.E. Lushnikov and V.A. Arkhipov                                                                                 | 244 |
| <b>Non-Uniform Temperature Distribution in Multilayer Thermal Protective Coating with Curved Interfaces</b><br>Y.A. Chumakov and A.G. Knyazeva                                                                                                 | 251 |
| <b>Numerical Simulation of Gas Evolution from Oil-in-Water Flow for Multistage Separation</b><br>A.A. Khamukhin and E.V. Nikolayev                                                                                                             | 257 |
| <b>Classification of the Signatures for Doppler Radar from the Standpoint of Active Perception Theory</b><br>V.E. Gai and A.M. Bogdan                                                                                                          | 262 |
| <b>A Three-Dimensional Boundary Element Approach for Transient Anisotropic Viscoelastic Problems</b><br>L.A. Igumnov, I.P. Markov and A.V. Amenitsky                                                                                           | 267 |
| <b>Convection Heat Transfer on a Vertical Surface in Porous Media</b><br>A.A. Bocharova and I.V. Plaksina                                                                                                                                      | 272 |
| <b>One-Dimensional Wave Propagation in a Three Phase Poroelastic Column</b><br>L.A. Igumnov, A. Petrov and I. Vorobtsov                                                                                                                        | 276 |
| <b>Hydrodynamics and Heat Transfer in the Coolant Flows in the Elements of the Technical Designs of Industrial Systems</b><br>A.V. Krainov, E.N. Pashkov, R.E. Lushnikov and V.A. Arkhipov                                                     | 280 |
| <b>Study of Bone Tissue Stress and Strain State Aimed at Development of Intelligent Biomaterials for Osteoimplantation</b><br>T.V. Kolmakova                                                                                                   | 284 |

## Chapter 2: Mechanical Engineering Technology

|                                                                                                                                                           |     |

### **Chapter 3: Advanced Materials and Alloys, Nanomaterials and Nanotechnology**

|                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Design of Composite Wire for Arc Welding and Ni<sub>3</sub>Al-Based Alloys Surfacing</b>                                                           |     |
| Y. Dubtsov, I. Zorin, G.N. Sokolov, A.A. Artem'ev and V.I. Lysak                                                                                      | 495 |
| <b>Influence of Granulation of Powder Charge of Titanium-Boron on Regularities of Self-Propagating High-Temperature Synthesis of Porous Materials</b> |     |
| D.I. Andriyanov, A.P. Amosov and A. Samboruk                                                                                                          | 500 |
| <b>Wear-Resistant Coatings Reinforced with TiB<sub>2</sub> Micro-Particles and TiCN Nano-Sized Particles</b>                                          |     |
| A.A. Artem'ev, G.N. Sokolov, V.I. Lysak, I. Zorin, Y. Dubtsov and S.N. Tsurikhin                                                                      | 505 |
| <b>Two-Step Synthesis of Tungsten and Molybdenum Disulfides</b>                                                                                       |     |
| Y. Irtegov, V. An, K. Machekhina and N. Lemachko                                                                                                      | 511 |
| <b>Morphology of Aluminum Nanopowder Combustion Products in a Magnetic Field in Air</b>                                                               |     |
| A.V. Mostovshchikov, A.P. Ilyin and I.K. Zabrodina                                                                                                    | 516 |

|                                                                                                                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Influence of Aluminium Nanopowder Density on the Structure and Properties of its Combustion Products in Air</b><br>A.P. Ilyin, L.O. Root and A.V. Mostovshchikov                                            | 521 |
| <b>Influence of Severe Plastic Deformation on Physicomechanical Properties of Ti-40 mas % Nb Alloy</b><br>Z.G. Kovalevskaya, M.A. Khimich, A.V. Belyakov and I.A. Shulepov                                         | 525 |
| <b>Developing Nanomaterials with Given Properties Based on Aluminum Oxyhydroxide</b><br>E.N. Gryaznova, L.N. Shiyan and Y.A. Irtegov                                                                               | 530 |
| <b>Interaction Potential of Open Carbon Nanotube with Natural Gas Molecular Components</b><br>E. Tarasov                                                                                                           | 534 |
| <b>Use of Zinc Oxide Nanopowder as an Additive in a Tribotechnical Composite Based on Refractory Metal Disulfide</b><br>E. Anisimov, Y. Irtegov, V. An, V.P. Druzyanova, N. Burtsev and M.B. Khaskelberg           | 539 |
| <b>Strains Determination at the Joints of Cylindrical Glass-Metal Composite Shell Layers</b><br>A. Ratnikov                                                                                                        | 543 |
| <b>Influence of Filling Agent Quantity on Characteristics of Polymeric Composites</b><br>R.E. Vitske, A. Kondratyuk and V.P. Nesterenko                                                                            | 548 |
| <b>Microwave Composite Absorbers Based on Barium Hexaferrite/Carbon Nanotubes for 0.01-18 GHz Applications</b><br>O. Dotsenko and K. Frolov                                                                        | 553 |
| <b>Obtaining Nanopowder Ligature Briquettes Ni-(SiC+Si<sub>3</sub>N<sub>4</sub>) for Modification of Aluminum Alloys</b><br>A.A. Kuzina and V.S. Ruchkina                                                          | 558 |
| <b>Electrochemical Activity of Methionine at Graphite Electrode Modified with Gold Nanoparticles</b><br>D. Perevezentseva, K.V. Skirdin, E.V. Gorchakov and V.I. Bimатов                                           | 563 |
| <b>Electrical Properties of Carbon Nanotube-Reinforced Polymer Composites</b><br>S.M. Lebedev, O.S. Gefle, E.T. Amitov, M.R. Predtechensky and A.E. Bezrodny                                                       | 569 |
| <b>Investigation of Deformation Mechanisms for High-Purity Aluminium at Various Fatigue Stages</b><br>O.Y. Vaulina, A.N. Durnovtseva and E.V. Shvagruckova                                                         | 574 |
| <b>Self-Propagating High-Temperature Synthesis of Composite Nanopowder AlN-BN from Systems "Sodium Azide – Halides of Aluminum and Boron"</b><br>L. Shiganova, G. Bichurov, I. Kerson, V. Novikov and A. Ermoshkin | 578 |
| <b>The Feasibility of Usage TiN and CrN Barrier Sublayers for Improving the Adhesion of Polycrystalline Diamond Films on WC-Co Hard Alloys</b><br>S.A. Linnik, A.V. Gaydaychuk and E.Y. Barishnikov                | 583 |
| <b>The Effect of Cu–Mo–S Coatings on Wear Resistance of Copper Friction Pair</b><br>V. Sergeev, S.Y. Zharkov, M.P. Kalashnikov and A.R. Sungatulin                                                                 | 587 |
| <b>Effect of Aluminum Content on the Performance of Coatings Based on Al-Si-N</b><br>I.A. Bozhko, E.V. Rybalko, M.P. Kalashnikov, M.V. Fedorishcheva and V. Sergeev                                                | 591 |
| <b>Property Investigation of Pt-Rh Alloy Nanopowders Obtained by Conductor Electric Explosion Method</b><br>S.P. Zhuravkov, A.V. Pustovalov, N.A. Yavorovsky, A.V. Korshunov, M.N. Vlasyuk and L.V. Nadeina        | 596 |
| <b>The Influence of Hydrogen on the Process of Plastic Flow Self-Organization in Ti</b><br>A. Lunev, M.V. Nadezhkin, S. Barannikova, L.B. Zuev and N.A. Ionova                                                     | 601 |
| <b>Microstructure and Properties of the Composite on the Basis of Copper and Diamond</b><br>A.S. Ivashutenko, N.V. Martyushev and Y.Y. Drozdov                                                                     | 607 |

## Chapter 4: Optical Technology

|                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Estimation of Orientation and Optical Properties of Plane Crystals by Polarization Characteristics of Lidar Returns</b><br>O.V. Shefer, O.V. Rozhneva and V.V. Loskutov | 613 |
| <b>Optical Model of Medium for the Numerical Imitation of Wave Surface Forming High-Intensity Reflected Radiant Energy</b><br>O.V. Shefer, V.V. Loskutov and O.V. Rozhneva | 618 |

|                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Luminescence of LiF Crystals Doped with Metal Oxide Impurities</b><br>V.I. Korepanov, P.V. Petikar and G.H. Ge             | 623 |
| <b>Stimulated Emission in CdHgTe Structures with Quantum Wells under Optical Pumping</b><br>D.I. Gorn and A.V. Voitsekhovskii | 627 |

## **Chapter 5: Discharge and Plasma-Beam Technology**

|                                                                                                                                                                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Oligomerization of Carbon Monoxide in Plasma of the Dielectric Barrier Discharge</b><br>E. Litvishko, M. Goreshnev and L. Maletina                                                                                                                                       | 635 |
| <b>The Energy Stored in the Aluminum Nanopowder Irradiated by Electron Beam</b><br>A.V. Mostovshchikov, A.P. Ilyin, A.A. Azanov and I.S. Egorov                                                                                                                             | 639 |
| <b>The Deposition of Silicon-Carbon Coatings in Plasma Based Nonself-Sustained Arc Discharge with Heated Cathode</b><br>A.S. Grenadyorov, K.V. Oskomov, A.A. Solovyev, S.V. Rabotkin and N.F. Kovsharov                                                                     | 643 |
| <b>Removal of Iron Colloid Substances from Aqueous Solutions Using Pulsed Corona Discharge</b><br>E.N. Gryaznova, S. Preis, J.I. Kornev, K. Machekhina, L.N. Shiyan and S.O. Magomadova                                                                                     | 648 |
| <b>Dissipation of Pulsed Electron Beam in Hydrogen and Oxygen in High Pressure</b><br>A. Tabaev, G. Kholodnaya, R. Sazonov and D. Ponomarev                                                                                                                                 | 653 |
| <b>Study of the Mechanism of Interaction of Microwave Plasma Discharge with Solutions of Organic Substances</b><br>L.N. Shiyan, A.G. Zherlitsyn, S.O. Magomadova and C.S. Lazar                                                                                             | 657 |
| <b>Study of Destruction of Organic Substances in Water Solutions by Pulsed Electrical Discharges in the Iron Granules Layer</b><br>G.L. Lobanova, T. Yurmazova, L.N. Shiyan and S.O. Magomadova                                                                             | 662 |
| <b>Multicapillary Carbon-Epoxy Tubes as a Cathode Material for a Pulsed Electron Accelerator</b><br>A.V. Poloskov, I.S. Egorov, V. Ezhov and G. Remnev                                                                                                                      | 667 |
| <b>Treeing Morphology in Oil Shale</b><br>A.A. Bukharkin, I.A. Koryashov, S.M. Martemyanov, E.V. Shvagrjukova and A.A. Isemlerlinova                                                                                                                                        | 672 |
| <b>Influence of the Plasma of Nanosecond Diffuse Discharge in Air at Atmospheric Pressure on the Electrophysical Properties of Epitaxial CdHgTe Films</b><br>K.A. Lozovoy, D.V. Grigoryev, V.F. Tarasenko and M.A. Shulepov                                                 | 676 |
| <b>The Study of Properties Characterizing Aluminum Hydroxides Produced by Electric Discharge</b><br>S.P. Zhuravkov, G.L. Lobanova, J.I. Kornev, O.S. Lutoshkina and Y.P. Khristunova                                                                                        | 680 |
| <b>Model of Powder Material Plastic Transformation during Plasma Coating Application</b><br>V.I. Bogdanovich and M.G. Giorbelidze                                                                                                                                           | 685 |
| <b>Coating Composition Evolution during the Deposition of Al and N from Plasma on a Cylindrical Substrate</b><br>S.A. Shanin, A.G. Knyazeva and O.N. Kryukova                                                                                                               | 690 |
| <b>Electron Beam Coatings with SHS Composite Powders "TiC - Cast Iron Binder" Synthesized in Air</b><br>E.N. Korosteleva, G.A. Pribytkov, S.S. Kalambaeva, V.V. Korzhova and V.G. Durakov                                                                                   | 695 |
| <b>The Analysis of the Mechanisms for Plasticization of Boron Carbide Ceramics Irradiated by an Intense Electron Beam</b><br>Y.F. Ivanov, O.L. Khasanov, V.V. Polisadova, M.S. Petukevich, T.V. Milovanova, A.D. Teresov, Z.G. Bikbaeva, M.P. Kalashnikov and A. Bratukhina | 700 |
| <b>Mobile Electric-Discharge Blasting Unit for Splitting off and Destruction of Rocks and Concrete</b><br>N. Voitenko and A.S. Yudin                                                                                                                                        | 705 |
| <b>Production of Powders by the Method of Electrospark Dispersion</b><br>S.P. Zhuravkov, J.I. Kornev, A.S. Ivashutenko and N.V. Martyushev                                                                                                                                  | 710 |
| <b>Regularities of Structure and Phase Composition Formation of Surface Layer of Silumin Subjected to Electron-Beam Treatment</b><br>A.V. Tkachenko, E.A. Petrikova, Y.F. Ivanov and A.D. Teresov                                                                           | 715 |
| <b>Structure and Properties of Electron-Beam Coatings, Overlaid of SHS Composite Powders "TiC - Ti", Synthesized in Air</b><br>M.G. Krinitcyn, G.A. Pribytkov and V.G. Durakov                                                                                              | 719 |

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| <b>Properties of WC-6Co Hard Alloy Powders Obtained by the Method of Spark Plasma Dispersion</b> |     |
| S.P. Zhuravkov, A. Pobol, G.L. Lobanova, G. Goranskyi and F. Saprikin                            | 724 |

## Chapter 6: Chemical Engineering and Technology

|                                                                                                                                              |     |
