## Preface, Committees

|                                                                                                                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Mechanical Properties of Functionally Graded Porous Aluminum Consisting of Pure Aluminum and Al-Mg-Si Aluminum Alloy</b><br>Y. Hangai, T. Morita and T. Utsunomiya                                                     | 1   |
| <b>Influence of Sintering Conditions on Mechanical Properties of Ag-Nano Sintered Material</b><br>S. Okuno, Q. Yu and Y. Nakata                                                                                           | 7   |
| <b>Crack Resistance Characterization in TiAl Intermetallics with Enhanced Toughness</b><br>I. Dlouhý, L. Stratil, H. Fukutomi and M. Hasegawa                                                                             | 13  |
| <b>Development of Evaluation Method that Takes into Account the Effect of the Fine Structure of Adhesive Interface for Delamination Strength of the Packaging Resin</b><br>Y. Furuyama, O. Honda and Q. Yu                | 19  |
| <b>Fracture Toughness of Massively Transformed and Subsequently Heat Treated TiAl Intermetallic Compound</b><br>K. Sakurai, M. Hasegawa and I. Dlouhý                                                                     | 25  |
| <b>Solid-State Diffusion Bonding of Titanium by Using Metal Salt Coated Aluminum Sheet</b><br>S. Koyama and V.P. Nguyen                                                                                                   | 31  |
| <b>Mechanical Stability and Deformation-Induced Transformation of Retained Austenite in TRIP Steels at Low Temperatures</b><br>T. Yamashita, N. Koga and O. Umezawa                                                       | 36  |
| <b>Influence of Chloride for SCC Susceptibility on 15Cr Stainless Steel at High Temperatures under CO<sub>2</sub> Environment</b><br>T. Sunaba, S. Hirano and T. Ishihara                                                 | 42  |
| <b>Potentiodynamic Polarization and Electrochemical Impedance Spectroscopy Used for Prediction of Nitinol Stent's Lifetime</b><br>J. Hlinka, S. Lasek and J. Branzovsky                                                   | 50  |
| <b>Analysis on Critical CTOD of Long-Term Used Penstock</b><br>F. Kawamura, M. Miura, R. Ebara and K. Yanase                                                                                                              | 57  |
| <b>Combination Criterion for Multiple Laminar Flaws in Steel Components</b><br>V. Lacroix, V. Mareš, B. Strnadel and K. Hasegawa                                                                                          | 63  |
| <b>Dynamic Tensile Testing of High Strength Armor Steel Plates</b><br>R. Tomášek and V. Mareš                                                                                                                             | 70  |
| <b>A Review of Subsurface Crack Initiation Models in High-Cycle Fatigue for Titanium Alloys</b><br>W.B. Li and O. Umezawa                                                                                                 | 76  |
| <b>Fatigue Crack Growth Simulation Using S-Version FEM: Application to Interacting Subsurface Cracks</b><br>A. Takahashi, A. Suzuki and M. Kikuchi                                                                        | 82  |
| <b>Effect of Stress Ratio on Fatigue Crack Growth Threshold for Austenitic Stainless Steels in Air Environment</b><br>K. Hasegawa and S. Usami                                                                            | 88  |
| <b>Effects of Slip Ratio on Damage and Microcracks in Carburized SCM420 Steel under Rolling Contact Fatigue</b><br>J. Sanekata, N. Koga and O. Umezawa                                                                    | 94  |
| <b>Extrapolation of Imaginal Minimum Creep Rate in Compression by a Concept of SATO-Index</b><br>H. Sato                                                                                                                  | 99  |
| <b>Non-Destructive Stress Evaluation of Tool Steel Using Scanning Hall Probe Microscope: Effect of Stress Direction on Three Dimensional Magnetic Fields</b><br>K. Kida, A. Yadoiwa, T. Yamada, R. Kawamura and M. Ishida | 105 |
| <b>Subsized Specimens for Fracture Resistance Characterisation Including Transferability Issues</b><br>I. Dlouhý, L. Stratil and F. Šiška                                                                                 | 110 |
| <b>Determination of Mechanical Properties of Metallic Materials from Very Small Volumes by Means of Small Punch Test</b><br>P. Dymáček, F. Dobeš and L. Kloc                                                              | 116 |

|                                                                                                                                                                                |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Mechanics of Herbert Pendulum Hardness Tester and its Application</b><br>R. Halama, J. Podešva, R. Suzuki, M. Matsubara and R. Čech                                         | 122 |
| <b>Microstructure Characterization of a Heterogeneous Weld for Welded Rotors</b><br>V. Vodárek and A. Volodarskaja                                                             | 128 |
| <b>Degradation Mechanism of Dissimilar Metal Weld Joints on Steam Generator Collectors VVER 440MW Type</b><br>L. Junek, L. Jurasek, Z. Čančura, M. Ernestová and Z. Skoumalová | 134 |
| <b>Visualization of Strain Distribution on Deformed Steels Using Digital Image Correlation Method</b><br>N. Koga, O. Umezawa and O. Umezawa                                    | 138 |
| <b>Reliability Evaluation of Car Power Module Using Electrical-Thermal-Structural Coupled Analysis Based on Field Driving Data</b><br>S. Nakayama, H. Morita and Q. Yu         | 144 |
