

Preface

The conference serves as a platform for discussing advanced and innovative technical solutions in various fields of modern materials science, engineering and energy. The purpose of the conference is the presentation of innovative approaches in the development of integration solutions in engineering and technology, as well as in interdisciplinary research. Key topics of the conference cover priority areas of research in the field of technical and related sciences and take into account global development trends.

MSEE'2019 topics are based on sustainability, with close attention paid to all forms of engineering professions and research tools.
