## Preface

|                                                                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>State-of-the Art Powder Diffraction Applications with Conventional Sealed-Tube X-Ray Sources</b>                                                                                                      |     |
| D. Louër                                                                                                                                                                                                 | 7   |
| <b>A Practice Oriented Way to Produce Diffraction Reference Cards Using Evaporite Minerals</b>                                                                                                           |     |
| M.G. Siemann                                                                                                                                                                                             | 27  |
| <b>Quantitative Phase Analysis by Using Whole Diffraction Profiles</b>                                                                                                                                   |     |
| U. Wachtel, E. Halwax and A. Preisinger                                                                                                                                                                  | 33  |
| <b>Quantitative Phase Analysis of Si<sub>3</sub>N<sub>4</sub> Ceramics using the Powder Diffraction Standard Data Base</b>                                                                               |     |
| N. Mattern, A. Riedel and A. Wassermann                                                                                                                                                                  | 39  |
| <b>A Method for the Determination of Weight Factors for Quantitative Phase Analysis using Dual Phase Starting Powders with Application to <math>\alpha</math> / <math>\beta</math> - Silicon Nitride</b> |     |
| W. Pfeiffer and M. Schulze                                                                                                                                                                               | 45  |
| <b>Quantitative Phase Analysis from X-Ray Powder Diffraction Data using two Stage Method</b>                                                                                                             |     |
| El-Sayed Karimat and Z.K. Heiba                                                                                                                                                                          | 51  |
| <b>Application of the Rietveld Method to Phase Analysis of Multilayered Systems</b>                                                                                                                      |     |
| L. Lutterotti, P. Scardi and A. Tomasi                                                                                                                                                                   | 57  |
| <b>Estimation of the Texture Correction in X-Ray Phase Analysis</b>                                                                                                                                      |     |
| B.D. Gao, H.J. Bunge and E.J. Fantner                                                                                                                                                                    | 63  |
| <b>Quantitative Phase Analysis of Texturised Materials</b>                                                                                                                                               |     |
| J.T. Bonarski and K. Pawlik                                                                                                                                                                              | 69  |
| <b>Fourier Methods for Separation of Size and Strain Broadening</b>                                                                                                                                      |     |
| J.G.M. Van Berkum, A.C. Vermeulen, R. Delhez, T.H. de Keijser and E.J. Mittemeijer                                                                                                                       | 77  |
| <b>Background and Bragg Scattering Component Separation in Powders via the XRD Technique</b>                                                                                                             |     |
| G. Berti                                                                                                                                                                                                 | 83  |
| <b>Rietveld Refinement employing X-Ray Data on CaWO<sub>4</sub> from Different Powder Diffraction Geometries</b>                                                                                         |     |
| P.B. Kempa and J. Felsche                                                                                                                                                                                | 89  |
| <b>Stress Measurements in Textured Materials</b>                                                                                                                                                         |     |
| P. van Houtte                                                                                                                                                                                            | 97  |
| <b>Interpretation of X-Ray Stress Measurements</b>                                                                                                                                                       |     |
| B. Kämpfe, F. Krause and L. Skurt                                                                                                                                                                        | 111 |
| <b>X-Ray Analysis of Residual Stresses and Textures in Thin Coatings</b>                                                                                                                                 |     |
| A. Schubert, B. Kämpfe and E. Auerswald                                                                                                                                                                  | 117 |
| <b>Oblique-Texture Electron Diffraction in Powder Crystallography</b>                                                                                                                                    |     |
