

PREFACE

The present volume is a collection of papers which have been presented at the "International Autumn School on Electrochemistry of Conducting Polymers" in Kazimierz nad Wisla, Poland from September 21-27, 1986. The purpose of this school was to bring together physicists, chemists, and material scientists, who are actively engaged in the investigations of this class of new materials, to enable discussions and exchange of scientific information and experience, and to offer newcomers in the field of conductive polymers an introduction on the basis of tutorial lectures with particular emphasis on electrochemical aspects.

The Autumn School was sponsored by the "Central Program of Fundamental Research CPBP 01.15 - Investigation of Electrochemical Processes for Technical Applications". The organizers thank all lecturers and participants for their contributions and cooperation. Our particular thanks are due to Janusz Plochanski, who acted as Scientific Secretary of the Autumn School and whose diligence and talent are largely responsible for the event.
