

Table of Contents

Preface

Fundamental Phenomena in Nucleation and Growth of Crystals Part A: Macroscopic Concepts and Energetics

J.M. Bermond 1

Fundamental Phenomena in Nucleation and Growth of Crystals Part B: Stability and Mobility of Aggregates on Surfaces

A. Masson 41

Statistical Physics of Clean Surfaces: Roughness and Surface Melting

J. Villain 65

X-Ray and Neutron Characterization of Multilayer Systems

M. Piecuch and L. Nevot 93

Structural Studies of Metallic Multilayers Using Transmission Electron Microscopy

J.P. Chevalier 141

X-Ray Absorption, Photoemission, and Auger Electron Spectroscopy: Electronic Structure and Growth of Metal/Metal Interfaces

B. Carrière and G. Krill 161

Practical Aspects of Molecular Beam Epitaxy

C. Chatillon and J. Massies 229

Thermodynamical Aspects

J.C. Joud, J.L. Bocquet and M. Gerl 287

Surfaces-Interfaces and Ultrathin Films of Transition Metals Growth, Electronic Structure and Magnetism

F. Gautier 361

Magnetic and Transport Properties of Metallic Multilayers

A.R. Fert 439

Mechanical Properties of Thin Films and Coatings

J. Grilhé 481

Surface and Interface Treatment of Multilayers Using Ion or Laser Beams

A. Pérez-Tomás, J. Delafond, J.M. Pelletier and B. Vannes 535

Metallic Superlattices: Applications, Manufacture and Characterization

P. Houdy 581

Multilayers and High- T_c Superconductivity

G. Creuzet, R. Cabanel and A. Schuhl 617
