## I. Superconductivity

|                                                                                                                                                                                                                                                                                                                                                                                                                               |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Stability of Toroidal SMES Using YBCO Tapes for Simultaneous Quench of a few Coils</b><br>S. Noguchi and S.B. Kim                                                                                                                                                                                                                                                                                                          | 3  |
| <b>Qualification of YBCO Rings and 100% YBCO Wire Loops with the Transformation of the DC Magnetic Field</b><br>J. Kósa                                                                                                                                                                                                                                                                                                       | 11 |
| <b>High Pressure Synthesized Magnesium Diboride- and Dodecaboride-Based Superconductors: Structure and Properties</b><br>T. Prikhna, W. Gawalek, Y. Savchuk, A.G. Mamalis, V. Tkach, H. Weber, T. Habisreuther, M. Eisterer, F. Karau, M. Wendt, N. Sergienko, V. Moshchil, A. Kozyrev, P. Nagorny, C. Schmidt, V.S. Melnikov, J. Dellith, D. Litzkendorf, J.G. Noudem, X. Chaud, V. Sverdun, A. Shapovalov and A. Starostina | 21 |
| <b>Impact of the Magnetic Flux Penetrating Vortex Core on the Critical Current of the HTc Superconductors</b><br>J. Sosnowski                                                                                                                                                                                                                                                                                                 | 28 |
| <b>Current-Phase Relation of <math>\text{YBa}_2\text{Cu}_3\text{O}_{7-x}/\text{Nb}</math> Unconventional Superconductor Junctions</b><br>B. Chesca, H.J. Smilde and H. Hilgenkamp                                                                                                                                                                                                                                             | 38 |
| <b>Design and Optimization of UAQ4 Experimental Maglev Module</b><br>G. D'Ovidio, F. Crisi and G. Lanzara                                                                                                                                                                                                                                                                                                                     | 42 |

## II. Advanced Magnetic Materials

|                                                                                                                                                                                         |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Construction of Development Technology of Next Generation Applied Electromagnetic Machinery in Japan</b><br>M. Enokizono                                                             | 51 |
| <b>Two-Dimensional Local Vector Magnetic Property Measurements by Use of Simple Transducers</b><br>K. Hirukawa, S. Nagata and M. Enokizono                                              | 60 |
| <b>Study of the Magnetic Anisotropy of the Grain Oriented (GO) and Non-Oriented (NO) Silicon Iron Materials</b><br>V. Păltânea and G. Paltanea                                          | 66 |
| <b>Comparison of Iron Losses in Multiple Grain Size Iron Laminations under Sinusoidal and SPWM Excitation</b><br>P. Rovolis, A.G. Kladas and J. Tegopoulos                              | 74 |
| <b>Effect of Stress on the Magnetic Characteristics of SmFe Thin Films</b><br>H. Wakiwaka, K. Ohtake, N. Itoh, T. Takeuchi, K. Tashiro, T. Kiyomiya and M. Makimura                     | 82 |
| <b>On the Magnetic and Magnetoelastic Uniformity Measurements on <math>\text{Fe}_{78}\text{Si}_7\text{B}_{15}</math> Amorphous Ribbons and Wires</b><br>A.G. Mamalis and E. Hristoforou | 87 |

## III. Nanotechnology

|                                                                                                                                                                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Magnetization and Giant Negative Magneto-Resistance in Nano-Scale <math>\text{Ni}_{3-\delta}\text{Mn}_{1+\delta}</math> in Pulsed Magnetic Fields up to 25 T</b><br>K. Yamada, J.L. Luo, H. Shimoji, Y. Nakahata, E.B. Borkowski, T. Todaka, M. Enokizono and T. Okazaki | 95  |
| <b>Magnetic Torque Evaluation for Magnetized Nanoparticles</b><br>V. Ionita and D. Ioan                                                                                                                                                                                     | 103 |

|                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Numerical Analysis of the Polishing Process of Inner Tube Wall Using Micron-Size Particles in Magnetic Fluids</b>                  |     |
| Y. Ido, T. Yamaguchi and H. Nishida                                                                                                   | 110 |
| <b>Nanostructure Formation in Silicon Photovoltaic Cells by Femtosecond Laser Pulses</b>                                              |     |
| A.M. Taleb, K.A. Al-Naimee, S.F. Abdalah, R. Meucci and F.T. Arecchi                                                                  | 118 |
| <b>Measurements of Magnetic Properties of Fe-Mn-Cr-Si-Sm-B Ferromagnetic Shape Memory Ribbons Depending on Stress and Temperature</b> |     |
| T. Todaka, D. Yamamichi and M. Enokizono                                                                                              | 122 |
| <b>Oblique Ion Etching for Copper at Elevated Temperature</b>                                                                         |     |
| T. Hino, T. Kobayashi, Y. Yamauchi, Y. Nobuta and M. Nishikawa                                                                        | 131 |

#### **IV. Non-Destructive Testing and Sensors**

|                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>New Signal Processing Method for Electromagnetic Inspection Using Multidirectional Magnetizing Type Sensor</b>                 |     |
| T. Suzuma                                                                                                                         | 137 |
| <b>Inductive Proximity Sensor with Novel Structure of Ferrite Core</b>                                                            |     |
| T. Mizuno, T. Fujii, T. Mizuguchi, Y. Kishi, K. Nakaya, M. Kasai and A. Shimizu                                                   | 142 |
| <b>Non-Destructive Evaluation for Internal Defect of Metal Casting</b>                                                            |     |
| S. Nagata, H. Kai and M. Enokizono                                                                                                | 151 |
| <b>Adaptive Scanning Algorithm Based on Neural Network Prediction of Eddy Current Testing Signals</b>                             |     |
| P. Lopato, T. Chady and T. Todaka                                                                                                 | 158 |
| <b>A Magnetic Microsensor with Temperature Compensation Based on Optical Mechatronic Technology</b>                               |     |
| C.C. Lai, I.N. Chang, H.C. Chang, C.C. Hwang, W.F. Liu, C.H. Ma and Y.H. Chen                                                     | 164 |
| <b>Integral-FEM Simulation and Independent Component Analysis for Multiple Defect Separation from Pulse Eddy Currents Signals</b> |     |
| G. Preda and I.F. Hantila                                                                                                         | 171 |

#### **V. Magnetic Fluids**

|                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Characteristics of Hydrodynamic Pressure of a Magnetic Fluid in a Tuned Magnetic Fluid Damper</b>                        |     |
| K.I. Ohno and T. Sawada                                                                                                     | 181 |
| <b>Magnetic Micro Swimming Mechanism and Visualization of the Surface Flow Induced by the Mechanism Propulsion</b>          |     |
| S. Sudo, K. Hoshika, K. Funyu and T. Yano                                                                                   | 191 |
| <b>Ultrasonic Investigation of the Effect of Volume Fraction on the Clustering Structures of Magneto-Rheological Fluids</b> |     |
| M.A. Bramantya, H. Takuma, J. Kuroiwa and T. Sawada                                                                         | 198 |
| <b>A Coupled System of a Magnet and Magnetic Fluid in a U-Tube under Reciprocating Traveling Magnetic Field</b>             |     |
| Y. Ido, K. Hayashi and T. Kunitomo                                                                                          | 207 |
| <b>Surface Responses of Magnetic Fluid Adsorbed to Permanent Magnet Subject to Vertical Vibration</b>                       |     |
| S. Sudo, Y. Kurosu and D. Asano                                                                                             | 215 |

#### **VI. Permanent Magnets and Applications**

|                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------|-----|
| <b>Improvement of PM-TFMs Characteristics by Flux Path Guiding</b>                                     |     |
| P. Curiać and D.H. Kang                                                                                | 223 |
| <b>Optimal Design of a Double-Sided Slotted Iron Core Type PMLSM with Manufacturing Considerations</b> |     |
| Y.W. Zhu, D.S. Kim, D.H. Kooa and Y.H. Cho                                                             | 235 |

|                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Design Comparison of Fractional-Slot IPM Machine Types for an Electric Power Steering Application</b>                               |     |
| C.C. Hwang, H.C. Chang, M.T. Ho and C.T. Liu                                                                                           | 243 |
| <b>Time Variation of Operational Characteristics for a Linear Permanent Magnet Synchronous Generator under Various Load Conditions</b> |     |
| N.M. Kimoulakis, P.E. Kakosimos and A.G. Kladas                                                                                        | 252 |
| <b>Investigation of the Impact of the Operational Temperature on the Performance of a Surface Permanent Magnet Motor</b>               |     |
| M.E. Beniakar, T.D. Kefalas and A.G. Kladas                                                                                            | 259 |
| <b>Coupled Field and Circuit Model Analysis of Permanent Magnet Synchronous Machine for Direct Torque Control Optimization</b>         |     |
| E.M. Tsampouris, C. Patsios, A. Chaniotis, A.G. Kladas and J. Prousalidis                                                              | 265 |

## VII. Computational Electromagnetics

|                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Simple-Box-9 Coil System: A Novel Approach to Design of a Square Coil System for Producing Uniform Magnetic Fields</b> |     |
| K. Tashiro, A. Matsuoka and H. Wakiwaka                                                                                   | 275 |
