

# Table of Contents

## Preface, Organizing Committee and Sponsors

### A. Materials for Environment Preservation, Energy Conservation and New Energy

|                                                                                                                                                                                                |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Barium-Free Glass-Ceramic Sealants from the System <math>\text{CaO-MgO-B}_2\text{O}_3\text{-Al}_2\text{O}_3\text{-SiO}_2</math> for Application in the SOFC</b>                             |    |
| A. Theerapapvisetpong, S. Jiemsirilers, P. Thavorniti and R. Conradt                                                                                                                           | 1  |
| <b>Fuel Gases from Gasification Process of Glass Fiber/Epoxy Composite Waste</b>                                                                                                               |    |
| K. Saetiauw, D. Atong, V. Sricharoenchaikul and D. Aht-Ong                                                                                                                                     | 5  |
| <b>A Study on the Characteristics of the Polycrystalline Silicon Annealed by the SHG Nd:YAG Laser</b>                                                                                          |    |
| Y.C. Kim, D.W. Kim, H.S. Kim, S.J. Ahn and S.J. Ahn                                                                                                                                            | 9  |
| <b>Adsorption Mechanism of Copper(II) Ions on Expansion-Treated Rice Husk</b>                                                                                                                  |    |
| X. Liang, X.G. Luo and X.Y. Lin                                                                                                                                                                | 13 |
| <b>Photoemission and Energy Gap of CdS Synthesized by Solid State Microwave-Plasma</b>                                                                                                         |    |
| W. Promnopas, T. Thongtem and S. Thongtem                                                                                                                                                      | 17 |
| <b>Cu (II)-Containing Micro-Arc Oxidation Ceramic Layers on Aluminum: Formation, Composition, and Catalytic Properties</b>                                                                     |    |
| D.J. Liu, B.L. Jiang, M. Zhai and Q. Li                                                                                                                                                        | 21 |
| <b>Effects of Annealing Conditions on Morphology and Permeability of Palladium Membrane</b>                                                                                                    |    |
| K. Hemra, M. Kitiwan and D. Atong                                                                                                                                                              | 25 |
| <b>Fixed-Bed Column Study for Zn (II) Removal from Solution Using Expanding Rice Husk</b>                                                                                                      |    |
| Z.F. Deng, X.G. Luo and X.Y. Lin                                                                                                                                                               | 29 |
| <b>Graft Copolymerization of Soybean Protein Isolate and Methyl Methacrylate</b>                                                                                                               |    |
| Y. Lu, X.G. Luo and X.Y. Lin                                                                                                                                                                   | 33 |
| <b>Nano Composite Membranes of Sulfonated Poly(ether sulfone) Containing 4,4-Bis(4-hydroxyphenyl)valeric Acid and <math>\text{SiO}_2</math> for PEMFC</b>                                      |    |
| Y.D. Lim, D.W. Seo, S.H. Lee, M.M. Islam, H.M. Jin, H.H. Jang, I. Jeong and W.G. Kim                                                                                                           | 37 |
| <b>Preliminary Studies on the Preparation of New-Style White Mud / KGM Membrane</b>                                                                                                            |    |
| Y. Chen, X.Y. Lin and W.X. Wang                                                                                                                                                                | 41 |
| <b>Preparation and Characterization of Sulfonated Imide-Grafted Poly(ethersulfone)s</b>                                                                                                        |    |
| D.W. Seo, Y.D. Lim, S.H. Lee, M.M. Islam, H.M. Jin, H.H. Jang and W.G. Kim                                                                                                                     | 45 |
| <b>Fabrication of <math>\text{Bi}_{0.5}\text{Na}_{0.5}\text{ZrO}_3</math> Powder by Mixed Oxide Method</b>                                                                                     |    |
| P. Jaiban, A. Rachakom, S. Buntham, S. Jiansirisomboon and A. Watcharapasorn                                                                                                                   | 49 |
| <b>Preparation, Electrochemical Properties and Cytotoxicity Assessment of Nanosized <math>\text{CuO/La}_2\text{O}_3\text{/CeO}_2</math> Composite for the Decomposition of Gaseous Ammonia</b> |    |
| C.M. Hung                                                                                                                                                                                      | 53 |
| <b>Sol-Gel Derived <math>\text{La}_{0.56}\text{Sr}_{0.4}\text{Co}_{0.2}\text{Fe}_{0.8}\text{O}_{3-\delta}</math> Cathodes for IT-SOFC Applications</b>                                         |    |
| C. Mongkolkachit and S. Wanakitti                                                                                                                                                              | 57 |
| <b>Study on the Reaction of Acetylated Konjac Glucomannan and EVA during Processing</b>                                                                                                        |    |
| X.H. Li, X.Y. Lin, X.G. Luo and J.W. Li                                                                                                                                                        | 61 |
| <b>Synthesis and Thermoelectric Properties of <math>\text{Co}_{4-x}\text{Fe}_x\text{Sb}_{12-y}\text{Sn}_y</math> Skutterudites</b>                                                             |    |
| K.H. Park and I.H. Kim                                                                                                                                                                         | 65 |
| <b>Synthesis and Thermoelectric Properties of Undoped Half-Heusler Zr-Co-Sb Alloy Processed by Mechanically Alloying and Hot Pressing</b>                                                      |    |
| I.H. Kim, J.C. Kwon, Y.G. Lee, S.L. Ryu, M.S. Yoon, W.G. Kim and S.C. Ur                                                                                                                       | 69 |
| <b>The Adsorption of Cd(II) Ions on Sodium Hydroxide-Treated Bamboo Powder</b>                                                                                                                 |    |
| A.K. Luo, X.G. Luo and X.Y. Lin                                                                                                                                                                | 73 |
| <b>The Studies of Adsorption of Heavy Metal Ions of Lead and Copper by Distillers' Grains</b>                                                                                                  |    |
| J. Feng, X.Y. Lin, X.G. Luo, J.Q. Rao and C.Y. Zhang                                                                                                                                           | 77 |
| <b>The Properties of ZnO Nanorods for Organic-Inorganic Solar Cell Fabricated by Wet Chemical Method</b>                                                                                       |    |
| S.J. Jo, T. Ban, A. Abidov, J.H. Lee, D. Lee, N.J. Park, S.W. Jeong, J. Ahn and S.J. Kim                                                                                                       | 81 |

|                                                                                                                        |    |
|------------------------------------------------------------------------------------------------------------------------|----|
| <b>Effect of Membrane Material Properties on Efficiency of Membrane Distillation</b><br>H. Kim, J.S. Choi and S.H. Lee | 85 |
|------------------------------------------------------------------------------------------------------------------------|----|

## **B. Materials Processing Technologies for Reduction of Environmental Impact**

|                                                                                                                                                                                                      |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Influences of Atomizing Pressure on Properties and Microstructure at Brazed Joint of Lead-Free Solder Powder</b><br>T.H. Xu, H.Y. Jin, M.Q. Zhao and D.H. Wang                                    | 89  |
| <b>Analysis of Fiber Filter Media after 6 Years of Use as a First Flush Filter</b><br>R.H. Kim, J.H. Lee, S.H. Lee and H. Kim                                                                        | 93  |
| <b>Application of Acid Modified CuO/Al<sub>2</sub>O<sub>3</sub> Nanostructured Catalysts and its Cytotoxicity Assessment for Enhanced CH<sub>4</sub>-SCR Performance</b><br>C.M. Hung                | 97  |
| <b>Catalytic Oxidation of Toluene over Fe<sub>2</sub>O<sub>3</sub>/Al<sub>2</sub>O<sub>3</sub> Catalyst</b><br>T. Miki and Y. Tai                                                                    | 101 |
| <b>Characterization of CuO/ZnO/Al<sub>2</sub>O<sub>3</sub> Catalyst for Methanol Synthesis</b><br>J. Zhou, X.Z. Lan, W.J. Luo, Y.H. Song, Q.L. Zhang and Y.H. Tian                                   | 105 |
| <b>Comparison of Sonochemistry Method and Sol-Gel Method for the Fabrication of TiO<sub>2</sub> Powder</b><br>J. Choi, S.H. Cho, T.H. Kim and S.W. Lee                                               | 109 |
| <b>Environmentally Benign Microwave-Assisted Sonogashira Preparation of Aromatic Compounds</b><br>S. Puechmongkol, B. Paosawatanyong and W. Bhanthumnavin                                            | 113 |
| <b>Adsorption Studies of Nitrobenzene onto Aminated Lignin</b><br>X.Y. Lin, J.P. Zhang, X.G. Luo and C. Zhang                                                                                        | 117 |
| <b>Immobilization of Iron Tetrasulfophthalocyanine on MCF-NH<sub>2</sub> and MCM-41 Mesoporous Silicas</b><br>J.S. Choi, S.H. Lee and H.H. Kwon                                                      | 121 |
| <b>Photocatalytic Activities of Transition Metal-Doped TiO<sub>2</sub> Nano-Powders by Sonochemical Method and their Physicochemical Properties</b><br>A.Y. Choi, Y. Tokutaro, S.H. Cho and C.H. Han | 129 |
| <b>Photocatalytic Decolorization of Methylene Blue by Ferric Stearate, Ferrocene and NiDBC under Sunlight Irradiation</b><br>Z. Zhao, X.G. Luo and X.Y. Lin                                          | 133 |
| <b>Reaction Synthesis of TiAl/Ti<sub>2</sub>AlC <i>In Situ</i> Composites</b><br>J.F. Zhu, W.W. Yang and Y.P. Gong                                                                                   | 137 |
| <b>Relationship between Chemical Composition and the Amount of Phosphorus Adsorbed</b><br>E. Watanabe, K. Nishizawa and M. Maeda                                                                     | 141 |
