## Preface

## Chapter 1: Building Materials and Structures

|                                                                                                                                                                                                                        |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Comparative Analysis of Windy Accumulated Sands by Heavy-Typed Compaction and Surface Vibration Compression Method of Desert Areas in China</b><br>J.C. Ning                                                        | 3  |
| <b>Study of Dimension Variation Effect on a Batter Piled Wharf Structure with Seismic Isolation Systems</b><br>J. Fendy, J.I. Rastandi, W.A. Prakoso and J. Sjah                                                       | 10 |
| <b>Assessment of the Structure of Polysilicate Binding with Added Glycerol</b><br>V. Loganina, Y.B. Mazhitov and Y.P. Skachkov                                                                                         | 15 |
| <b>A Formula for the Relationship between Penetration Depth, Viscosity of Asphalt Grouting and Diameter of Stone, Apply for Designing Asphalt-Grouted Stone Revetments</b><br>H.H. Nguyen, M.T. Nguyen and H.T. Nguyen | 20 |
| <b>The Development of Accelerated Test Method for Internal Sulfate Attack by Delayed Ettringite Formation</b><br>V.H. Nguyen, N. Leklou and P. Mounanga                                                                | 27 |
| <b>Development of Ultra High Performance Concrete Using Fly Ash</b><br>R. Hela and L. Bodnárová                                                                                                                        | 33 |
| <b>Effect of Type of Aggregate on Abrasion Resistance of Concrete</b><br>L. Bodnárová, R. Hela, L. Osuská and M. Ťažký                                                                                                 | 39 |

## Chapter 2: Polymers and Composites

|                                                                                                                                                                                                                                                                                                  |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Energy-Absorption Ability of Embedding Whisker Alumina Fiber into Natural Rubber Composite for Insulation Applications</b><br>W. Leelawanachai, N. Dedruktip and N. Tangboriboon                                                                                                              | 47 |
| <b>Dense ZrB<sub>2</sub>-MoSi<sub>2</sub> Composite Coating Fabricated by a New Multi-Chamber Detonation Accelerator on Carbon/Carbon Composites</b><br>M.G. Kovaleva, I.Y. Goncharov, V.Y. Novikov, I.A. Pavlenko, M.N. Yaprntsev, O.N. Vagina, V.V. Sirota, Y.N. Tyurin and O.V. Kolisnichenko | 53 |
| <b>Thermal Conductivity of Silicone Rubber Filled with Al<sub>2</sub>O<sub>3</sub></b><br>Q.H. Mu, D. Peng, F. Wang, J.H. Li and S. Zhang                                                                                                                                                        | 59 |
| <b>Preparation and Properties of One Component RTV Silicone Resin Composed of Polysiloxane Block Copolymer</b><br>D. Peng, Q.H. Mu, S. Zhang, W. Ju, F. Wang and J.H. Li                                                                                                                         | 64 |
| <b>Preparation and Structural Stability of LiFePO<sub>4</sub> Ga-LLZO Composite Cathode Material Heat-Treated at Intermediate Temperatures</b><br>P.J. Diamansil, J. Hablado, J.C. Palomares, R.M. Garcia and R.B. Cervera                                                                       | 70 |

## Chapter 3: Materials and Technologies for Pharmacology and Biomedical Application

|                                                                                                                                                     |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Application of Magnesium and its Alloys in Biodegradable Vascular Stent</b><br>J.Y. Liu, J.G. Wang, Y.H. Yu and N. Wang                          | 77 |
| <b>Formulation Development and <i>In Vitro</i> Evaluation of Buccal Tablets of Ramipril</b><br>D.N. Venkatesh, R. Rajeshkumar and R.N.A. Huy        | 83 |
| <b>Formulation and <i>In Vitro</i> Evaluation of Gastroretentive Theophylline Floating Tablets</b><br>D.N. Venkatesh, R. Rajeshkumar and R.N.A. Huy | 88 |
| <b>Advances in Biodegradable Vascular Stent Materials</b><br>J.Y. Liu, J.G. Wang, Y.H. Yu and N. Wang                                               | 93 |

|                                                                                                                                                                                     |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Preparation and Characterization of Monodisperse Mesoporous SiO<sub>2</sub> Microspheres Modified by Octaphenylpolyoxyethylene</b><br>B. Chen, Y.B. Guo, Y.P. Huang and H. Zhong | 99 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|

## **Chapter 4: Applied Biotechnologies, Chemical Technologies in Food and Cosmetics Industry and Environmental Engineering**

|                                                                                                                                                                                                             |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Effect of Plasticizer on the Rheological Properties of <i>Caesalpinia pulcherrima</i> Gum Aqueous Solutions</b><br>W. Sittikijyothin, K. Khumduang and R. Mongkholrattanasit                             | 107 |
| <b>Effect of Plasticizer on the Physical and Mechanical Characteristics of <i>Caesalpinia pulcherrima</i> Gum Edible Film</b><br>W. Sittikijyothin, K. Khumduang, C. Hongvaleerat and R. Mongkholrattanasit | 112 |
| <b>Effect of Tacca Starch Loading on Production of Amylolytic Enzymes from Ragi Tapai</b><br>N.S. Izyan, D.N. Azman, N.A. Mohd Saad, S.M. Saud and H. Fazlena                                               | 118 |
| <b>Effect of Microwave-Alkali Techniques on the Morphology and Physical Changes of Treated Oil Palm Empty Fruit Bunches Fiber</b><br>H. Fazlena, A. Idris and M. Sarif                                      | 124 |
| <b>Removal of Cadmium Ions from Aqueous Solutions Using Acid-Activated Cockle Shell Powder</b><br>T.A. Nguyen, T.P. Le and T.K. Phung                                                                       | 129 |

## **Chapter 5: Modeling and Numerical Investigation of Materials Behaviour and Technological Processes**

|                                                                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>On Heat Transfer of a Two-Step Radiating Slab of Variable Thermal Conductivity</b><br>R.S. Lebelo                                                                                                     | 137 |
| <b>Finite-Element Analysis of Preform Deformation for Flat Wall Thickness Distribution in the Injection Blow Molding Process</b><br>N. Atigkaphan and S. Thusneyapan                                     | 142 |
| <b>Raising Intensity and Modeling the Process of Inulin Extraction from Raw Materials of Plant Origin</b><br>I.Y. Aleksanyan, A. Hamed-Harisovich, R.V. Mutsaev, M.A. Salvatierra Barzola and T.S. Nguen | 149 |
| <b>Digitized Simulation of the Moving Bed</b><br>C.F. Xie, R.C. Huang, L. Xu, F.Q. Zhang and L.X. Xu                                                                                                     | 157 |

## **Chapter 6: Metallurgy, Metal Machining and Ceramics Fabrication**

|                                                                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Novel Crystalline Glaze for Decoration of Ceramic Pottery</b><br>Q.M. Do, T.T.L. Nguyen, V.T.H.Q. Pham and H.T. Nguyen                                      | 165 |
| <b>Investigating Plasma-Nozzle Wear Based on Processing Time and Current Ampere</b><br>P. Pittayachaval, Y. Aupkaew, S. Sakhonkhan, T. Sukan and C. Patchaikhonang | 171 |
| <b>Effect of Titanium on Microstructure and Solidification Behavior of Gray Irons</b><br>S. Boonmee, K. Worakhut and P. Maneelum                                   | 177 |
