

Table of Contents

Preface**Review of Additive Manufacturing Methods**

T.G. Gawel 1

The Surface Morphology and Electrochemical Properties of Pure Titanium Obtained by Selective Laser Melting Method

A. Woźniak, M. Adamiak and B. Ziębowicz 21

Main Defects Observed in Titanium GRADE II and 316L Stainless Steel Elements Obtained by Selective Laser Melting

A. Woźniak and M. Adamiak 33

Design and Selective Laser Melting Manufacturing of TPE Extrusion Die

M. Król, M. Musiorski and M. Pagac 51

Laser Surface Alloying of Aluminium Alloys with Cu/Fe Metallic Powders

W. Pakieła and Z. Brytan 64

Fabrication of TiC-Reinforced Surface Layers on Ductile Cast Iron Substrate by Laser Surface Alloying

D. Janicki 76

Laser Thermal Oxidation by Ytterbium-Doped Fibre Laser of the Hot and Cold-Rolled Stainless Steel Surface

Z. Brytan and W. Pakieła 100

Tribological Characteristic of Tool Steel Surface Layer Alloyed Using Laser

M. Bonek and E. Tillová 110

Surface Properties Enhancement of Light Alloys by Appliance of Laser Treatment

K. Labisz and T. Tański 119

The Use of Lasers at Various Stages of the Manufacturing Process of Solar Cells Based on Crystalline Silicon

M. Musztyaga-Staszuk and P. Panek 138

Structure of Titanium GRADE 1 after Laser Alloying with FeCr Powder

M. Wiśniowski, T. Tański and P. Snopiński 157

Surface Hardening of AlMg₅Si₂Mn Alloy through Multi-Axis Compression Using Max Strain

P. Snopiński, T. Tański and W. Borek 171
