## Preface

## Chapter 1: Cement Based Binders

|                                                                                                    |    |
|----------------------------------------------------------------------------------------------------|----|
| <b>Study of Development of Hydrating Temperatures and Reduction of Volume Changes in Concretes</b> |    |
| O. Pikna, M. Ťažký, R. Hela and K. Křížová                                                         | 3  |
| <b>Hydration and Microstructure of Nano Modified Cement Paste</b>                                  |    |
| G. Skripkiūnas, E. Karpova, R. Drochytka and J. Hodul                                              | 9  |
| <b>Influence of Cement Type on Stability of Concrete Mixture</b>                                   |    |
| M. Ťažký and R. Hela                                                                               | 15 |
| <b>Changes in Crystallite Size of Tricalcium Silicate during the Laboratory Grinding</b>           |    |
| S. Ravaszová and K. Dvořák                                                                         | 23 |
| <b>Using of the Ultrasonic Method for Alkali-Silica Reaction Detection in the Cement Mortar</b>    |    |
| D. Gusak, J. Brožovský and R. Hela                                                                 | 29 |
| <b>The Development of New Chemically Resistant Material for the Invert Grouting</b>                |    |
| P. Figala, R. Drochytka and V. Černý                                                               | 37 |

## Chapter 2: Alternative Inorganic Binders

|                                                                                                                                                             |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Effect of Limestone Origin on the <math>\text{CaCO}_3</math> Decomposition Process and Subsequent Crystallization Process of <math>\text{CaO}</math></b> |    |
| D. Sklenářová, K. Dvořák and D.M. Kaporcová                                                                                                                 | 45 |
| <b>The Influence of Activated Dispersed Additives on Electrical Conductivity of Anhydrite Compositions</b>                                                  |    |
| G.I. Yakovlev, E.V. Begunova, R. Drochytka, J. Melichar, I. Pudov and Z.S. Saidova                                                                          | 51 |
| <b>Conductive Metakaolin Geopolymer with Steel Microfibres</b>                                                                                              |    |
| C. Mizerová, I. Kusák, P. Rovnaník and P. Bayer                                                                                                             | 59 |
| <b>Fly Ash-Based Geopolymer: Green Material in Carbon-Constrained Society</b>                                                                               |    |
| H.T. Nguyen and P.T. Dang                                                                                                                                   | 65 |
| <b>Evaluation on Microstructure Stability and Thermal Resistant Ability at High Temperature of Ternary-Blended Geopolymer</b>                               |    |
| H.T. Nguyen                                                                                                                                                 | 73 |

## Chapter 3: Progressive Building Materials and Technologies

|                                                                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Non-Destructive Methods of Measuring Modulus of Elasticity of Building Materials and Reproducibility and Interpretation of their Results</b>               |     |
| D. Bujdoš                                                                                                                                                     | 83  |
| <b>Effect of Crystallization Additives on Durability of Cement Composites in Aggressive Environments</b>                                                      |     |
| Á. Dufka, Š. Keprdová and T. Melichar                                                                                                                         | 89  |
| <b>Investigation of the Rheokinetic Properties and Penetration Depth of Aluminosilicate Adhesive in Pine Wood</b>                                             |     |
| S.G. Guziy, O. Guzii and V. Lashchivskiy                                                                                                                      | 97  |
| <b>Possibilities of Using Pumice Concrete as Thermal Insulation Lining of Industrial Chimneys</b>                                                             |     |
| M. Pešata, L. Procházka and J. Boháčová                                                                                                                       | 105 |
| <b>Experimental Study of Selected Properties of Heavyweight Concrete Based on Analysis of Chemical Composition and Radioactive Elements of its Components</b> |     |
| J. Dragomirová, M. Palou, K. Gméling, V. Szilágyi, I. Harsányi and L. Szentmiklósi                                                                            | 113 |
| <b>The Influence of Finely Ground Limestone in the Design of Concrete for White Boxes Regarding the Suppression of Shrinkage</b>                              |     |
| L. Osuská, M. Meruňka and R. Hela                                                                                                                             | 119 |

|                                                                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Influence of Colloidal Silica on Final Properties of no Cement Castables</b><br>D. Zemánek and L. Nevřivová                                                                   | 125 |
| <b>Utilization of Fly Ash in the Synthesis of Refractory Forsterite-Spinel Ceramics</b><br>M. Nguyen and R. Sokolař                                                              | 131 |
| <b>The Effect of Class C Fly Ash on the Water Impermeability of Brick Body</b><br>R. Sokolař, M. Nguyen and O. Pavelka                                                           | 141 |
| <b>Factors Influencing Mullite Formation in Refractory Grog</b><br>L. Nevřivová and D. Zemánek                                                                                   | 149 |
| <b>Hygrothermal Behaviour of Inorganic Binder-Based Board Materials</b><br>J. Bubeník and J. Zach                                                                                | 157 |
| <b>Complex Shrinkage-Reducing Additives for Alkali Activated Slag Cement Fine Concrete</b><br>P.V. Krivenko, V.I. Gots, O. Petropavlovskiy, I. Rudenko and O.P. Konstantynovskiy | 165 |
| <b>Possibilities of Utilization of Waste Materials in Production of Electrically Conductive Composites on Silicate Basis</b><br>J. Majerová and R. Drochytka                     | 171 |
| <b>Material Corrosion of Tunnel Fire Protection Boards</b><br>D. Sklenářová, U. Diederichs, Š. Keprdová and I. Hájková                                                           | 177 |
