## Preface

## Chapter 1: Green Building Materials

|                                                                                                                                                   |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Use of Alternative Raw Materials for the Production of Fiber Cement Products</b><br>M. Hoško, L. Bodnárová and O. Pikna                        | 3  |
| <b>Research of a New Chemically Resistant Repair Mortar Modified with Secondary Raw Materials</b><br>P. Figala, R. Drochytka and L. Mészárossová  | 9  |
| <b>The Influence of Organic Fibers on the Fire Resistance of Concrete</b><br>J. Klobása and R. Hela                                               | 15 |
| <b>Reduction of Firing Temperature by Utilization of Secondary Materials for the Synthesis of Forsterite Ceramics</b><br>M. Nguyen and R. Sokolař | 21 |
| <b>Effect of Secondary Fillers in Polymeric Material for CIPP on Fresh Processability</b><br>K.H. Jakubíková and R. Drochytka                     | 27 |
| <b>Possibilities of Determining K-Value and Activity Index for Ground Granulated Blast Furnace Slag</b><br>P. Šperling and R. Hela                | 33 |

## Chapter 2: Silicate Materials

|                                                                                                                                                              |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Resistivity Changes of Electrically Conductive Silicate Composites Loaded in Different Directions</b><br>S. Baranek, V. Uher and V. Cerny                 | 41 |
| <b>The Effect of the Type of Gelling Agent on the Speed of Gelation of Sol-Gels</b><br>J. Majerová, D. Sklenářová and L. Nevřivová                           | 47 |
| <b>Verification of the Electrical Impedance Method for Measuring the Humidity of Silicate Material</b><br>E. Hrabalkova, D. Powetz, D. Prusa and S. Stastnik | 53 |
| <b>The Effect of the Gelling Agent on the Gelation Rate and the Formed Sol-Gel Structure</b><br>D. Sklenářová, J. Majerová, A. Kohutová and L. Nevřivová     | 61 |
| <b>Influence of Sintering Time with Constant Temperature on the Development of the Tricalcium Silicate Crystallinity</b><br>A. Jančíků and K. Dvořák         | 67 |

## Chapter 3: Anticorrosion Coatings

|                                                                                                                                                                                                                                                                                                      |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Synthesis of Silanated Coconut Oil-Based Waterborne Polyurethane Coating for Corrosion Protection</b><br>D.J.E. Estrada, A. Tilendo, A.C. Alguno, A.A. Lubguban, G. Dumancas, A. Maputi, V. Enobio, R. Malaluan and A.A. Lubguban                                                                 | 77  |
| <b>Anti-Corrosion Properties of Polyaniline/Polyurethane Composite Coatings on Mild Steel Using Coconut-Based/PPG Blend Polyols</b><br>M.T. Bonilla, A.G. Ruda, D.J.E. Estrada, K.S.M. Ubas, A.A.B. Mutia, A.A. Lubguban, R.Y. Capangpangan, J.P. Labis, A.C. Tilendo, N.L.B. Sayson and A.C. Alguno | 89  |
| <b>Development and Characterization of Epoxy/Banana Pseudo-Stem Nanocellulose (BPNC) Composites as Anti-Corrosion Coatings on Mild Steel</b><br>K.S.M. Ubas, J.C. Grumo, A.G. Ruda, M.T. Bonilla, A.A.B. Mutia, J.P. Labis, N.L.B. Sayson and A.C. Alguno                                            | 103 |
