

# Table of Contents

## Preface and Committees

## Chapter 1: Development and Prototyping

<b>Method for the Identification and Comparison of Alternative Process Chains Focusing on Economics Efficiency Analysis during the Conceptual Design of Mechatronic Integrated Devices</b>	
T. Schierbaum, J. Gausemeier and R. Dumitrescu	3
<b>Novel Approach for the Implementation of 3D-MID Compatible Routing Functionalities into Computer-Aided Design Tools</b>	
J. Zeitler, B. Götz, C. Fischer and J. Franke	11
<b>Optimized Process Sequences for Prototyping of Molded Interconnect Devices</b>	
C. Jürgenhake, C. Fechtelpeter, R. Dumitrescu and D. Heidsiek	19
<b>Integration of Functional Circuits into FDM Parts</b>	
A. Wild	29

## Chapter 2: Printing Technologies

<b>Printing of Functional Structures on Molded 3D Devices</b>	
B. Polzinger, V. Matic, L. Liedtke, J. Keck, D. Hera, T. Günther, W. Eberhardt and H. Kück	37
<b>Electrical Functionalization of Thermoplastics by Combining Plasmadust Coating and Aerosol Jet Printing</b>	
R. Schramm, J. Hörber, C. Dold and J. Franke	43
<b>Production of Miniaturized Sensor Structures on Polymer Substrates Using Inkjet Printing</b>	
O. Kravchuk, K. Grunewald, J. Bahr, F. Hofmann and M. Reichenberger	49
<b>Progress in the Manufacturing of Molded Interconnected Devices by 3D Microcontact Printing</b>	
K. Cheval, J. Coulm, S. Gout, Y. Layouni, P. Lombard, D. Leonard, F. Bessueille, V. Semet and M. Cabrera	57

## Chapter 3: Materials and Manufacturing

<b>Characterization of Electromagnetic Properties of MID Materials for High Frequency Applications up to 67 GHz</b>	
Q.H. Dao, A. Friedrich and B. Geck	63
<b>Novel Laser Induced Metallization for Three Dimensional Molded Interconnect Device Applications by Spray Method</b>	
M.C. Chou, T.H. Kao, M.C. Huang, W.H. Zhang, W.Y. Li and T.H. Lai	69
<b>Experimental Investigation of Laser Sintering of Conductive Adhesive for Functional Prototypes Produced by Embedding Stereolithography</b>	
B. Niese, P. Amend, U. Urmoneit, S. Roth and M. Schmidt	75
<b>MID Fabricated by Ultrasonic Processing</b>	
W.K. Schomburg, J. Li, S. Liao, C. Gerhardy and J. Sackmann	83
<b>Usage of Industrial Robots as Flexible Handling Devices Supporting the Process of Three Dimensional Conductive Pattern Generation</b>	
A. Buschhaus and J. Franke	89

## Chapter 4: Manufacturing Processes

<b>Study of MID Technologies for Automotive Lighting and Light Signaling Devices</b>	
F. Marcori, M. Antonipieri, I. di Vora, S. Padovani and I. Riolino	97

## **Chapter 5: Assembly Technologies and Inspection**

### **Design and Solder Process Optimization in MID Technology for High Power Applications**

A. Syed-Khaja and J. Franke

107

## **Chapter 6: Quality and Reliability**

### **Hot Pin Pull Method – New Test Procedure for the Adhesion Measurement for 3D-MID**

C. Goth, T. Kuhn, G. Gion and J. Franke

115
