## Preface and Committee

## Chapter 1: Research on Material Science, Processing and Technologies

|                                                                                                                                                                                                              |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Research on Characteristics of Plastic Materials and Plastic Optical Fiber</b><br>N. Zhang, Z.Y. Han, L.Q. Song and Y.M. Lu                                                                               | 3  |
| <b>Transport Property Analysis of a Microencapsulated Phase Change Material Suspension with Material Properties</b><br>W.B. Fang and Y.B. Xue                                                                | 7  |
| <b>Preparation and Characterization of Calcium Sulfate Spherical Particles for Dentistry</b><br>T.T. Yan, X.P. Wu, C.Y. Leng and Q.H. Chen                                                                   | 13 |
| <b><i>Ab Initio</i> Calculations of a Refractory Ceramic (<math>\beta</math>-Ge<sub>3</sub>N<sub>4</sub>): A Computer Simulation</b><br>C. Xu and D. Chen                                                    | 18 |
| <b><i>Ab Initio</i> Study of the Ge<sub>3</sub>N<sub>4</sub> Semiconductor Materials in its Cubic <math>\gamma</math> Phase: A Computer Simulation</b><br>C. Xu and D. Chen                                  | 22 |
| <b>Study on the Preparation of Strontium-Doped Hydroxyapatite Whisker</b><br>T.T. Yan, Y.S. Cui and Q.H. Chen                                                                                                | 26 |
| <b>Effect of Adding Micro Amount Rare Earth Element Er on Mechanical Property of Bi5Sb8Sn Solder Alloy</b><br>S. Li, Y.F. Yan, Y.T. Jiu and H.N. Wang                                                        | 30 |
| <b>Research on the Dimpling in Multi-Point Thermoforming of Polycarbonate Sheet</b><br>J.H. Cao, W.Z. Fu and M.Z. Li                                                                                         | 34 |
| <b>Porous Calcium Sulfate/Hydroxyapatite Whiskers Scaffold for Bone Tissue Engineering</b><br>T.T. Yan, X.P. Wu, Y.S. Cui, Q.H. Chen and Z.D. Yang                                                           | 38 |
| <b>The Probability Distribution Modeling of Surface Heat Flux Density on Metal Material</b><br>C.Z. Yang and L. Zhou                                                                                         | 42 |
| <b>Sonication Parameters Analysis of MWCNTs Monodispersion in Aqueous Solution of Triton X-100</b><br>S.W. Lu, X.J. Zeng, P. Nie and C.X. Zhang                                                              | 46 |
| <b>Calculation of Ionization Potential and Electron Affinity of the Optoelectronic Material Iridium (III) Metal Complexes Containing the 2-phenyl Pyridine-Type Ligands</b><br>H.Y. Xia, G.H. Ge and F. Zhao | 52 |
| <b>Ionic Liquid Assisted Dispersion of Reduced Graphene Oxide in Epoxy Composites with Improved Mechanical Properties</b><br>Y.E. Liu, C.E. He, R.G. Peng, W. Tang and Y.K. Yang                             | 56 |
| <b>Biological Performances Investigation of KGM/SH Fiber Membranes</b><br>Y. Li, X.P. Wu, Y.S. Cui, C.Y. Leng, T.T. Yan and Q.H. Chen                                                                        | 61 |
| <b>Effect of Konjac Glucomannan Content on the Structure and Properties of Sodium Hyaluronate/Chitosan/Konjac Glucomannan Composite Films</b><br>W.B. Zhu, J. Chen, T.T. Yan, W.B. Zhu and Q.H. Chen         | 67 |
| <b>Tensile Test of Composite Laminates and Specimen's Improvement</b><br>M. Wang, R. Bai and R. Wang                                                                                                         | 73 |
| <b>Surface Properties of the Ta and Ag Dual-Ion-Implanted Ti6Al4V Alloy</b><br>C.Y. Leng, R. Zhou and X. Zhang                                                                                               | 78 |
| <b>Study on the Environmental Materials with the Enzyme-Producing Conditions of a PCBs-Degrading Halophilic Bacterium</b><br>Z. Zhao                                                                         | 83 |
| <b>Effect of Triethanolamine Addition in Alkaline Bath on the Electroplating Behavior, Composition and Corrosion Resistance of Zn-Ni Alloy Coatings</b><br>J.M. Long, X. Zhang and H.Z. Pei                  | 87 |
| <b>Effect of Cl<sup>-</sup> Content, pH Value and CO<sub>2</sub> on Electrochemical Corrosion Features of Cr15 Super Martensitic Stainless Steel</b><br>J.M. Long, Q.B. Liu, K.Y. Zhao, Q.L. Yong and J. Su  | 92 |

|                                                                                                                                                                                 |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Fracture Failure Mechanism Analysis of a Type of Tracklayer Gearbox Casing Based on Mechanical Mechanics and Material Properties</b><br>Y.T. Niu, X.H. Mu, L. Li and L.C. Li | 97  |
| <b>Parameters Setting Impact Analysis of Composite Cockpit Finite Element Analysis Based on Properties of Composite Materials</b><br>H.P. Gao, M. Liu and J. Wang               | 103 |

## **Chapter 2: Building Materials, Structures and Technologies of Construction**

|                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Dangerous Rock Mass Deformation Analysis with Application of Kalman Filter Method Based on Material Properties and AR Model</b><br>F.M. Lu and T.Y. Jiang           | 109 |
| <b>Research on Design of Intelligent Building Internal Structure Based on Building Materials</b><br>Z.Y. Han, N. Zhang, Z.C. Wu and Y.M. Lu                                | 113 |
| <b>Research on Construction Materials with Innovation Strategies for Regional Architecture Renovation</b><br>J. Li                                                         | 117 |
| <b>Combined Application of Three Nondestructive Testing Methods in Simulation Test of a Large Concrete-Filled Steel Tube</b><br>M.R. Zhou, Z.Y. Guo, Q.F. Shen and Z.B. Li | 121 |
| <b>Mechanical Properties Research of Steel-Concrete Composite Structure's Connector</b><br>X.Y. Si, J.B. Zhao and X.Z. Bai                                                 | 128 |
| <b>Construction of New Energy-Saving Building Materials Based on Formal Concept Analysis Methods</b><br>H.S. Xu, Q. Tan and C. Li                                          | 133 |
| <b>Research of Green Building Materials and Engineering System Development Based on Wireless Sensor Zigbee Technology</b><br>J.S. Yuan                                     | 137 |
| <b>The Novel Model of Building and Energy Engineering with New Building Materials Based on IPv6 Technology</b><br>G.F. Kuang and Z.F. Sun                                  | 141 |
| <b>Research on Building Materials and Engineering System Based on Embedded System</b><br>H.Q. Hao and B. Zhao                                                              | 145 |
| <b>Effect of Raw Material's Properties to HMA's Pavement Performance</b><br>Z.H. Cong and N.X. Zheng                                                                       | 149 |
| <b>Development of Novel Building Materials and Mining System Based on Improved Radio Frequency Identification Technology</b><br>Y. Wang                                    | 153 |
| <b>Preparation of Reactive Powder Concrete Having High Volume of Phosphorous Slag Powder and Silica Fume</b><br>H. Sun, Y.Z. Peng, J.F. Tang and N. Li                     | 157 |

## **Chapter 3: General Mechanical Engineering**

|                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Mechanics Research with Prediction on the Fatigue Life of the Five-Cylinder Emulsion Pump Crankshaft</b><br>L. Ran                     | 163 |
| <b>Blank Unfolding Calculation for Blades of Stamping Welded Hydrodynamic Torque Converter</b><br>Y. Tan, W.X. Ma and C.B. Liu            | 167 |
| <b>Numerical Computation and Analysis of Particle Trace Based on Aerodynamic in Heavy Medium Cyclone</b><br>Y.M. Xia, Z.Q. Xu and Y.N. Tu | 172 |
| <b>Mechanics Analysis with Different Open Lid Time on Shockwaves in Launch Box</b><br>Q.Z. Cao, Y. Jiang, Z.Z. Yang and S.Z. Yu           | 177 |
| <b>Study on Mechanical Automation with Cool-Starting Capacity of the Battery for Vehicles</b><br>Z.S. Lu                                  | 182 |

|                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Study on Mechanical Automation with Analytic Method Utilization of Motor Car Engine Failure Diagnosis Fault Tree</b><br>Z.S. Lu                         | 186 |
| <b>Study on Mechanical Automation with Noise Characteristic and Control of Blower Room</b><br>H. Liu and H. Cui                                            | 191 |
| <b>Study on Automation Control with Noise Control of Oil Sucking Machine</b><br>H. Liu and H. Cui                                                          | 195 |
| <b>Study on Mechanical Automation with Design of Mechanism Transmission System for Automobile Transmission Test Platform</b><br>H. Li, H.F. Bo and J.S. Gu | 199 |
| <b>Research on Mechanical Automation with Vehicle's Reconstruction Analysis Model of Offset Collision Accidents</b><br>Y. Cao and Z.Y. Zuo                 | 203 |
| <b>Optimized Design of Energy Absorption Construction of ROPS</b><br>S.L. Feng, Q.J. Zhang, Z.G. Tian and S. Lin                                           | 208 |

## **Chapter 4: Research on Automation, Communication and Information Technologies**

|                                                                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Research on Mechanical Automation with Analysis of Modeling Train Collision Accident Based on Stochastic Petri Net</b><br>C.X. Cao, C. Wu, Y.H. Sun and K.P. Li  | 215 |
| <b>Research on Mechanical Automation with Analysis of Mixed Train Scheduling Problem on the High-Speed Rail Line</b><br>C.X. Cao, Y.H. Sun and C. Wu                | 219 |
| <b>Study on Mechanical Automation with Detection Technology in Central Air-Conditioning</b><br>Y.Q. Zhao, Y. Gu, Y.L. Lv, S.C. Liu and Y.J. Li                      | 223 |
| <b>Study on Mechanical Automation with Simulation of Wind Energy Conversion System Based on Sliding Mode Control</b><br>S. Tang and W. Wang                         | 227 |
| <b>Automatic Anti-Skidding System Optimization Design for Military Vehicles on Ice and Snow Road</b><br>Q. Cheng                                                    | 231 |
| <b>Study on Automation Learning System with Electronic Materials</b><br>X.Z. Tian                                                                                   | 235 |
| <b>Study on Automation Control with Water Quality Monitoring System Based on GPRS Technology</b><br>S.W. Lin and Y.W. Zhai                                          | 239 |
| <b>Study on Communication Automation with Embedded Real Time Signal Acquisition and Process System Based on PC104</b><br>W.D. Chen, Y.M. Cheng, J. Cao and H.Q. Liu | 243 |
| <b>Study on Mechanical Automation with Design of Electric Control System of Automobile Transmission Assembly Test Platform</b><br>H. Li, H.F. Bo and J.S. Gu        | 247 |
| <b>Study on Electric Automation with Reactive Optimization Based on TSGA in Power System</b><br>J. Zhao, W. Shi and C.X. Xu                                         | 251 |
| <b>Study on Mechanical Automation with X-Ray Power Conveyor Belt Nondestructive Detection System Design</b><br>Y.D. Wang                                            | 256 |
| <b>The Automation of Spillway Gate Machine of Hydropower Power Station</b><br>X.G. Ren, C.Z. Yang and Y.B. Wu                                                       | 260 |
| <b>The Design and Application of an Improved Word Segmentation Algorithm Based on PATRICIA Tree Dictionary in Communication Material</b><br>X.M. Yang               | 264 |
| <b>The Research on Image Semantic Correlation Metrics Based on Word-Net in Communication Material</b><br>J.X. Zhang                                                 | 268 |

|                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Application of Intelligent Industrial Robotic Control System Based on PLC in Mechanical Automation</b>                 | 272 |
| D.C. Lan                                                                                                                      |     |
| <b>Research on Communication Automation with Design and Implementation of FTP Based on Serv-U</b>                             | 276 |
| H. Ji                                                                                                                         |     |
| <b>Research on Tension Control with Fuzzy PID Control in the Low Relaxation PC Strand Wire Based on Mechanical Automation</b> | 280 |
| D.M. Li, L.S. Guo and C.H. Zhang                                                                                              |     |
| <b>Study on Mechanical Automation with Improvement of Battery Test System for Electric Vehicle</b>                            | 287 |
| Y.P. Wan and W. Yao                                                                                                           |     |

## **Chapter 5: Other Topics**

|                                                                                                                                     |     |
|-------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A Brief Study on Electronic Materials with Automation System in Autonomous Learning with Electronic Materials</b>                | 295 |
| C.M. Wu                                                                                                                             |     |
| <b>Study on Materials Selection and Construction of Digital Language Lab Based on Properties of Electronic Materials</b>            | 299 |
| Q.Y. Xi                                                                                                                             |     |
| <b>Study on Magnetic Materials with Numerical Calculation of Geoelectromagnetic Field in Middle-Low Latitude Region</b>             | 303 |
| W.L. Wu                                                                                                                             |     |
| <b>Implementation of Fuzzy Adaptive PID in Thickener Flocculation Dosing Control System Based on Properties of Mining Materials</b> | 307 |
| Z. Hu, S.M. Zhang and J.J. Lou                                                                                                      |     |
