## Preface

## Chapter 1: Advanced Industrial Technologies in Alloy Processing

|                                                                                                                                                                                            |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Manufacturing Route for Hot Stamping of Aluminium Alloy Applied to a Wing Rib</b><br>A. Arroyo, G. Atxaga and B. Canflanca                                                              | 3  |
| <b>Study on Uniform and Varying Friction Conditions in Superplastic Forming</b><br>E. Parameswaran, M. Farell, R. Huang, W. Kerr, D. Gonzalez, N. Zuelli and M. Bucconi                    | 17 |
| <b>Experimental Investigation of Gas-Oscillation Superplastic Forming of AA5083 Aluminum Sheet in a Dual-Cavity Tool</b><br>E. Rzyer, Y. Song, S.C. Xu, L. Kiawi, D.E. Green and G. Rankin | 27 |

## Chapter 2: Specific Material Processing and Tool Development

|                                                                                                                                                       |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Study of the Influence of Process Parameters on Processing Time in Laser Engraving</b><br>F. Corb, T. Buidos, C. Stănel, I. Stănel and G.V. Mnerie | 39 |
| <b>New CNC Turning Solution Versus CNC Conventional Turning</b><br>A. But and L. Gal                                                                  | 49 |
| <b>Analysis of the Vibration Behavior of the Cutting Tool in the Case of Turning Machining</b><br>G. Belgiu, M.E. Selariu and B. Radu                 | 61 |
| <b>Design and Structural Analysis of a Support System for a 3d Printer</b><br>S. Dohan, A.I. Biholar and S.V. Galatanu                                | 71 |

## Chapter 3: Materials and Technologies for Electronics and Photonics

|                                                                                                                                                                                                                                               |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Cu Ribbon Ultrasonic Bonding on Die-Top Nanotwinned Cu Films Evaporated on SiC Chips for Power Modules</b><br>T.H. Chuang, C.H. Tsai, W.C. Huang, J.H. Chen, J.Y. Chang, C.H. Chen, Y.H. Chen, Y.T. Chen and A.Y. Lin                      | 83  |
| <b>Development of Ag Nanotwinned Film Coated Pre-Formed Silver Sintered Sheets for the Die Bonding of SiC Chips with DBC Ceramic Substrates</b><br>T.H. Chuang, J. Wang, Y.H. Chen, C.H. Chen, A.Y. Lin, J.Y. Chang, J.H. Chen and W.C. Huang | 89  |
| <b>The Electrical Properties of VN Thin Films Prepared Using Reactive Magnetron Sputtering</b><br>Y.C. Lee, Y.J. Liou and Y.C. Wang                                                                                                           | 97  |
| <b>Purcell and Pulse Induced Impact for Measurement Based on Nitrogen-Vacancy Centers in Diamond</b><br>L.M. Ji, L.Y. Zhao and Y.H. Wang                                                                                                      | 105 |

## Chapter 4: Advanced Technologies in Materials Science

|                                                                                                                                                                                                                                 |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Collection of Replicas to Evaluate the Structural Condition of Steel after Thermal Ageing</b><br>D. Bricin, Z. Špirit and J. Brom                                                                                            | 113 |
| <b>Preparation of Thin and Powdered Radioactive Samples for Electron Microscopy and X-Ray Diffraction Analysis of Radiation-Induced Damage</b><br>V. Rosnecký, C. Aparicio, O. Nechypor, P. Halodová, P. Gávelová and Z. Fencel | 119 |
| <b>The Influence of Sample Preparation on Correlative Microscopy with the Use of Artificial Intelligence Methods</b><br>O. Ambrož, J. Čermák and Š. Mikmeková                                                                   | 127 |
