## Preface

## Chapter 1: Steel and Alloys

|                                                                                                                                                                                                                                                     |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Optimal Selection of Machining Parameters for Minimization of Elementary Energy Consumption during Machining of 304 Austenitic Stainless Steel</b><br>N. Baishya, K. Das, K. Roy, H. Ahmed and K. Chakraborty                                    | 3  |
| <b>Adhesion of Aluminum Alloy to Tip of Nozzle Plate of Vertical Type High Speed Twin Roll Caster</b><br>T. Haga, H. Ochi, H. Fuse, H. Watari and S. Nishida                                                                                        | 11 |
| <b>Microstructure and Mechanical Properties of 28 % High Chromium White Cast Iron</b><br>P. Batkhuu, A. Purvee, T. Purevdorj and K. Kelgenbai                                                                                                       | 17 |
| <b>Tensile Properties, Strain Rate Sensitivity and Microstructural Analysis of SN100C Solder Alloys</b><br>T.H. Gu, S.W. Jiang and W. Su                                                                                                            | 25 |
| <b>Material Characterisation and Mechanical Properties of WNbMoVAl<sub>x</sub>Cr<sub>y</sub> (x=0.5, 1 y= 0.5, 1) Refractory High Entropy Alloys</b><br>M. Biyiklioglu, K.G. Bayrak, E. Ayas, B. Baksan, H. Gokce, D. Agaogullari and M.L. Ovecoglu | 33 |
| <b>A Comparative Study on Force Deformation Behaviour of Fe and Cu-Based SMA with NiTi SMA</b><br>M.Y.M.H. Shaikh and S. Gur                                                                                                                        | 41 |
| <b>Experimental Investigation of the Effect of Input Control Variables and Thermal Treatments on the Impact Toughness of EN-31 Steel</b><br>K. Kamei, R. Davis and R.B.D. Pereira                                                                   | 47 |
| <b>Target Alloys of Iron-Based Materials through CALPHAD Method</b><br>Y. Faqiri and T. Hassel                                                                                                                                                      | 55 |

## Chapter 2: Additive Manufacturing

|                                                                                                                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Experimental Investigations on Strength of a Nano Doped 3D Printed Circuit Board for Application in Electronics Industry</b><br>B. Gautam, S. Sharma, A.S. Baghel and R. Dua                                    | 69 |
| <b>Characterization and Optimization of Mechanical Properties in Laser Powder Bed Fusion Manufactured 316L Stainless Steel</b><br>T. Rautio, M. Hietala, M. Jaskari, A. Mustakangas, M. Keskitalo and A. Järvenpää | 75 |
| <b>Analysis of Mechanical Properties and Fatigue Resistance in Laser Welded WAAM Ultra-High-Strength Steel</b><br>M. Hietala, M. Keskitalo, J. Arvola and A. Järvenpää                                             | 83 |

## Chapter 3: Chemical Engineering

|                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Characterizations of Some Selected Clay Types for Cost Effective Wastewater Treatments</b><br>S. Aluvihara, C.S. Kalpage and B.S. Chauhan             | 93  |
| <b>Coalescence Dynamics of Oil Droplets on an Air-Water Interface Driven by Surface Waves</b><br>P.N. Panday, A. Kumar, A. Bandopadhyay and P. Kumar Das | 111 |
