## Preface, Committees and Bioceramics Symposia

## I. Biostable Ceramics and Tough Ceramics

|                                                                                                                                                                                                                        |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Ceramics in THR Bearings: Behavior under Off-Normal Conditions</b><br>C. Piconi, A.A. Porporati and R.M. Streicher                                                                                                  | 3  |
| <b>Apatite-Forming Ability of ZrO<sub>2</sub> Ceramics Enhanced by Sandblasting and Chemical Treatment and the Influence on Mechanical Properties</b><br>M. Kolafová, A. Nežiková, J. Kamprle, J. Strnad and Z. Strnad | 8  |
| <b>Electrophoretic Deposition of Zirconia Multilayered Constructs</b><br>F. Lütke, M. Maier, A. Urbanska, R. Zehbe, C. Fleck, W.D. Müller and C. Mochales                                                              | 13 |
| <b>Characteristics of Low Temperature Degradation Free ZTA for Artificial Joint</b><br>J. Ikeda, T. Murakami, T. Shimozone, R. Watanabe, M. Iwamoto and T. Nakanishi                                                   | 18 |

## II. Glasses and Glass-Ceramics

|                                                                                                                                                                                                                                               |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>A Comparative Investigation on a Novel Bioactive Glass Synthesized via Sol-Gel Processing</b><br>S.S. Seyedmomeni, M. Naeimi, M. Raz, J. Aghazadeh Mohandesi and F. Moztarzadeh                                                            | 25 |
| <b>Sol-Gel Synthesis and Characterization of SiO<sub>2</sub>-CaO-P<sub>2</sub>O<sub>5</sub>-SrO Bioactive Glass: <i>In Vitro</i> Study</b><br>S. Solgi, M. Shahrezaee, A. Zamanian, T.S. Jafarzadeh Kashi, M. Raz, K. Khoshroo and M. Tahriri | 30 |
| <b>Combustion Synthesis of 58S Bioglass Using Sol-Gel Self-Propagating Combustion Method</b><br>C.A. Bertran and O.V.M. Bueno                                                                                                                 | 36 |
| <b>Spine-Ghost: A New Bioactive Cement for Vertebroplasty</b><br>C. Vitale-Brovarone, L. Pontiroli, G. Novajra, I. Teacencu, J.C. Reis and A. Manca                                                                                           | 43 |

## III. Calcium Phosphates

|                                                                                                                                                                                    |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Transparent Hydroxyapatite Obtained through Spark Plasma Sintering: Optical and Mechanical Properties</b><br>Z. Li and K.A. Khor                                                | 51 |
| <b>NMR Structural Characterization of Mg-Containing Nano-Apatite</b><br>S. Hayakawa, T. Konishi, T. Yoshioka, E. Fujii and K. Kawabata                                             | 57 |
| <b>Evaluation of Sr- and/or Mg-Containing Hydroxyapatite Behavior in Simulated Body Fluid</b><br>L. Stipniece, K. Salma-Ancane, A. Putnins and L. Berzina-Cimdina                  | 61 |
| <b>Improving the Flexural Strength Test of Brushite Cement</b><br>S. Altundal, K.A. Gross, C. Ohman and H. Engqvist                                                                | 67 |
| <b>Biphasic Calcium Phosphate: Preferential Ionic Substitutions and Crystallographic Relationships at Grain Boundaries</b><br>T. Miramond, T. Rouillon and G. Daculsi              | 73 |
| <b>Fabrication of <math>\alpha</math>-Tricalcium Phosphate Ceramics through Two-Step Sintering</b><br>I.Y. Kim, J. Wen and C. Ohtsuki                                              | 78 |
| <b>Calcium Phosphate-Loaded Strips, Plugs and Putties: Physico-Chemical Properties for Osteopromotion and Ease of Surgery</b><br>T. Miramond, T. Galtier, G. Daculsi and P. Borget | 83 |
| <b>Synthesis of Peroxyapatite by Hydrothermal Processing</b><br>K. Gross, A. Jersova and A. Viksna                                                                                 | 88 |
| <b>Synthesis of Tetracalcium Phosphate at Reduced Temperatures</b><br>K. Gross and E. Rozite                                                                                       | 93 |
| <b>Effect on Drying Conditions on Amorphous Calcium Phosphate</b><br>A. Brangule and K. Gross                                                                                      | 99 |

## IV. Cements

### **Biocompatibility of Silver-Containing Calcium-Phosphate Cements with Anti-Bacterial Properties**

Y. Shimizu, Y. Kawanobe, T. Konishi, N. Kanzawa, M. Honda and M. Aizawa 107

### **Preparation of $\alpha$ -Tricalcium Phosphate Powders Surface-Modified with Inositol Phosphate for Cement Fabrication**

T. Konishi, M. Honda, T. Yoshioka, S. Hayakawa and M. Aizawa 113

### **The Effects of Nanoparticles of Silica and Alumina on Flow Ability and Compressive Strength of Cementitious Composites**

A.S. Khorasani, H. Nuranian, A.A. Yuzbashi, S. Moghaddas, M. Raz and M. Tahriri 119

### **Effect of Particle Size on Carbonate Apatite Cement Properties Consisting of Calcite (or Vaterite) and Dicalcium Phosphate Anhydrous**

A. Cahyanto, R. Toita, K. Tsuru and K. Ishikawa 128

## V. Composites and Hybrid Materials

### **Bioceramic Production from Giant Purple Barnacle (*Megabalanus tintinnabulum*)**

F.N. Oktar, H. Gokce, O. Gunduz, Y.M. Sahin, D. Agaogullari, I.G. Turner, L.S. Ozyegin and B. Ben-Nissan 137

### **Colour Stability of Self-Adhesive Flowable Composites before and after Storage in Water**

M. Arregui, L. Giner, M. Ferrari and M. Mercadé 143

### **Preparation of a Poly(Lactic Acid)/Montmorillonite Nanocomposite**

K. Nakanishi, S. Yamagata, T. Akasaka, S. Abe, Y. Yoshida and J. Iida 151

### **Microstructural and Mechanical Properties of Zirconia-Silica-Hydroxyapatite Composite for Biomedical Applications**

A. Arabaci, N. Yüksel and N. Demirkol 156

### **Fabrication of Bioactive Poly(lactic Acid) Composite Formed by 3D Printer**

R. Karashima, T. Yabutsuka and T. Yao 160

### **Characterization and Bioactivity of Hydroxyapatite-ZrO<sub>2</sub> Composites with Commercial Inert Glass (CIG) Addition**

B. Bulut, N. Demirkol, Z.E. Erkmén and E.S. Kayali 166

### **Fibers Obtaining and Characterization Using Poly (Lactic-co-Glycolic Acid) and Poly (Isoprene) Containing Hydroxyapatite and $\alpha$ TCP Calcium Phosphate by Electrospinning Method**

F.A. Vechietti, D. Marques, N.O. Muniz and L.A. Santos 173

### **Dissolution Behavior of Zinc from Gel Composites Consisting of Calcium Phosphate and Alginate**

T. Uchino, Y. Negishi and K. Oguma 179

### **Collagen/Polyurethane-Coated Bioactive Glass: Early Achievements towards the Modelling of Healthy and Osteoporotic Bone**

S. Caddeo, F. Baino, A.M. Ferreira, S. Sartori, G. Novajra, G. Ciardelli and C. Vitale-Brovarone 184

## VI. Nanoparticles and Nanostructured Ceramics

### **Magnetic Properties of Mg<sub>0.4</sub>Ca<sub>0.6</sub>Fe<sub>2</sub>O<sub>4</sub> Nanoparticles Synthesized by Sol-Gel Method for Hyperthermia Treatment**

A.M. Escamilla-Pérez, D.A. Cortés-Hernández, J.M. Almanza-Robles, D. Mantovani and P. Chevallier 193

### **Physico-Chemical Characteristics of TiO<sub>2</sub> Derived Nanotube Synthesized by the Hydrothermal Process as a Bioceramic**

H. Eslami, F. Moztafarzadeh, T.S. Jafarzadeh Kashi, M. Solati-Hashjin, K. Khoshroo and M. Tahriri 198

### **Nanostructured Bone Grafting Substitutes Versus Autologous Cancellous Bone – An Animal Experiment in Sheep**

T. Gerber, C. Ganz, W. Götz, K. Helms, C. Harms and T. Mittlmeier 202

|                                                                                                                                                                                                    |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Sintering Behavior of Nanostructured Hydroxyapatite Ceramics</b><br>J.A. Delgado, L.M. Alonso, J. Nascimento, K.P. Macedo, A. Antunes, M. Varella, A. Alfonso, S. Martínez and M. García-Vallès | 207 |
| <b>H<sub>2</sub>S Adsorption Capability of Layered Double Hydroxide Containing Transition Metal</b><br>Y. Yokogawa, H. Sano, S. Namba, K. Fujii, Y. Morita, M. Hotta and Y. Doi                    | 212 |
| <b>Development and Characterization of Hydroxyapatite Containing Silver by Precipitation and Immersion Methods</b><br>M.F. Santos, L.C.O. Vercik, A. Vercik and E.C.S. Rigo                        | 216 |

## VII. Coatings, Surface Engineering and Interfaces

|                                                                                                                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chemical and Heat Treatments for Inducing Bone-Bonding Ability of Ti-6Al-4V Pedicle Screw</b><br>S. Yamaguchi, K. Akeda, K. Murata, N. Takegami, M. Goto, A. Sudo, T. Matsushita and T. Kokubo                                     | 225 |
| <b>Fabrication of Bioactive Apatite Nuclei Precipitated Ti-15Mo-5Zr-3Al Alloy by Using Doubled Sandblasting Process</b><br>T. Yabutsuka, H. Mizuno, R. Karashima and T. Yao                                                           | 231 |
| <b>Novel Bone-Like Porous Glass Coatings on Al<sub>2</sub>O<sub>3</sub> Prosthetic Substrates</b><br>F. Baino, F. Tallia, G. Novajra, J. Minguella, M.A. Montealegre, F. Korkusuz and C. Vitale-Brovarone                             | 236 |
| <b>Interface Function Design and Bone-Regenerative Engineering of Biomimetic Biomaterials by Supersonic Treatment Using Electrolyzed Water</b><br>T. Akazawa, M. Murata, Y. Minamida, M.A. Kabir, M. Ito, A. Katayama and T. Nakajima | 241 |
| <b>Formation of Calcium-Phosphate Coatings on Ti6Al4V Substrates by an Autocatalytic Deposition Route</b><br>E.A. Aguilar-Reyes, C.A. León-Patiño and B. Jacinto-Díaz                                                                 | 247 |
| <b>Effect of Poling Treatment on Piezoelectric Constant of Pulsed Laser Deposited Hydroxyapatite Thin Films</b><br>T. Nishigaki and S. Hontsu                                                                                         | 253 |
| <b>Evaluation of Dentin Tubule Sealing Rate Improved by Attaching Ultrathin Amorphous Calcium Phosphate Sheet</b><br>N. Kato, A. Isai, E. Yamamoto, H. Nishikawa, M. Kusunoki, K. Yoshikawa, K. Yasuo, K. Yamamoto and S. Hontsu      | 258 |
| <b>A Novel Treatment for Dentine Cavities with Intraoral Laser Ablation Method Using an Er:YAG Laser</b><br>E. Yamamoto, N. Kato, A. Isai, H. Nishikawa, Y. Hashimoto, K. Yoshikawa and S. Hontsu                                     | 262 |

## VIII. Additive Manufacturing of Ceramics and Composites

|                                                                                                                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Automatic Casting of Advanced Technical Ceramic Parts via Open Source High Resolution 3D Printing Machines</b><br>J. Minguella, M. Villegas, B. Poll, G. Tena, J.A. Calero, M. Ginebra and F. Korkusuz | 269 |
| <b>Effect of Variation of Dispersant and Fluid in the Rapid Prototyping of Alumina</b><br>N.O. Muniz, F.A. Vechietti and L.A. Santos                                                                      | 275 |

## IX. Scaffolds

|                                                                                                                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Tailoring of Bone Scaffold Properties Using Silicate/Phosphate Glass Mixtures</b><br>G. Novajra, P. Perdika, R. Pisano, F. Baino, J.R. Jones, A.R. Boccaccini, R. Detsch and C. Vitale-Brovarone | 283 |
| <b>HA/TCP Scaffolds Coated by PLA and Gelatin: Preliminary <i>In Vitro</i> Evaluation</b><br>L.R. Rodrigues, C.A. de Carvalho Zavaglia and C.B. Lombello                                            | 289 |
| <b>P19.CL6 Cells Cultured in Apatite-Fiber Scaffold Differentiate into Cardiomyocytes</b><br>K. Yasuda, H. Ishii, M. Takahara, M. Aizawa and N. Kanzawa                                             | 295 |
| <b>Bio-Hybrid Scaffolds for Bone Tissue Engineering: Nano-Hydroxyapatite/Chitosan Composites</b><br>B. Palazzo, D. Izzo, F. Scalera, A.N. Cancelli and F. Gervaso                                   | 300 |

|                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------|-----|
| <b>Investigating Approaches for Three-Dimensional Printing of Hydroxyapatite Scaffolds for Bone Regeneration</b> |     |
| Z.X. Zhou, F. Buchanan, A. Lennon and N. Dunne                                                                   | 306 |

## **X. Ceramics for Drug Delivery**

|                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>pH Effect on the Dissolution Behavior of the Microspheres Containing Strontium Ranelate</b>                                    |     |
| A.P. Duarte Moreira, M.S. Sader, G.D. de Almeida Soares and M.H.M. Rocha Leão                                                     | 315 |
| <b>Bone Substitutes as a Drug Delivery of Antibiotics</b>                                                                         |     |
| C. Ganz and T. Gerber                                                                                                             | 321 |
| <b>Fabrication of Hydroxyapatite Microcapsule Containing Vitamin B<sub>12</sub> for Sustained-Release</b>                         |     |
| T. Yabutsuka, K. Iwahashi, H. Nakamura and T. Yao                                                                                 | 326 |
| <b>Controlled Release of a Protein Using a Ceramic Carrier and Zinc Ions as a Novel Approach to the Treatment of Osteoporosis</b> |     |
| H. Watanabe, T. Ikoma, M. Tanaka, T. Yoshioka and J. Tanaka                                                                       | 332 |

## **XI. Cell-Material Interactions**

|                                                                                                                                    |     |
|------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Effect of Surface Silver Ions towards Inhibiting Bacterial Growth on Apatite</b>                                                |     |
| E.S. Thian, P.N. Lim, B. Ho, B.Y. Tay and W. Wang                                                                                  | 341 |
| <b>Multiparametric <i>In Vitro</i> Evaluation of Cytocompatibility of 1% Strontium-Containing Nanostructured Hydroxyapatite</b>    |     |
| D. Reis, D. Silva, J. Côrtes, L. Hummel, E. Mavropoulos, A. Linhares and G. Alves                                                  | 345 |
| <b>Effects of Albumin Adsorption on Cell Adhesion in Hydroxyapatite Modified Surfaces</b>                                          |     |
| J. Côrtes, E. Mavropoulos, M. Hausen, A. Rossi and G. Alves                                                                        | 351 |
| <b>Evaluation of Commercial Latex as a Positive Control for <i>In Vitro</i> Testing of Bioceramics</b>                             |     |
