

# Table of Contents

## Preface, Organizing Committee and Sponsors

## Plenary

### Physics on the Top of the Tip: Atomic Transport and Reaction in Nano-Structured Materials

G. Schmitz, D. Baither, Z. Balogh, M.R. Chellali, G.H. Greiwe, M. Kasprzak, C. Oberdorfer, R. Schlesiger and P. Stender 3

### Formation and Migration Energy of Native Defects in Silicon Carbide from First Principles: An Overview

G. Roma, F. Bruneval, L.A. Ting, O.N. Bedoya Martínez and J.P. Crocombette 11

### Diffusion Aspects in High Temperature Corrosion and in the Development of Protective Coatings

M. Schütze 19

### Grain Boundary Diffusion, Stresses and Segregation

B.S. Bokstein 31

## Chapter 1: Diffusion Fundamentals

### Entropy Production and Stress–Deformation Effect on Interdiffusion

M. Danielewski 43

### Kirkendall Effect during Grain Boundary Interdiffusion in Polycrystalline Thin Films

L. Klinger and E. Rabkin 49

### Flux Driven Nucleation at Interfaces during Reactive Diffusion – New Solution of an Old Problem

A. Gusak, G. Schmitz and N. Storozhuk 55

### Determination of Diffusion Coefficients with Quantitative X-Ray Microanalysis at High - Spatial Resolution

R. Gauvin, N. Brodusch and P. Michaud 61

### A SIMS Study on Li Diffusion in Single Crystalline and Amorphous $\text{LiNbO}_3$

J. Rahn, E. Hüger, E. Dörrer, B. Ruprecht, P. Heitjans and H. Schmidt 69

### $^{26}\text{Al}$ Tracer Diffusion in Nominally Undoped Single Crystalline $\alpha\text{-Al}_2\text{O}_3$

P. Fielitz, G. Borchardt, S. Ganschow and R. Bertram 75

### Numerical Aspects of Electrodiffusion Problem Based on Nernst-Planck and Poisson Equations

J. Fausek, K. Szyszkiewicz and R. Filipek 81

## Chapter 2: Numerical Studies

### Study of the Reactive Dynamics of Nanometric Metallic Multilayers Using Molecular Dynamics : The Al-Ni System

A. Linde, O. Politano and F. Baras 89

### Atomistic Simulation of Clustering and Annihilation of Point Defects in Molybdenum

A. Yanilkin, Z. Insepov, G. Norman, J. Rest and V. Stegailov 95

### Multiscale Modelling of Morphological Evolution of Rough Surface during Superficial, Volume and Evaporation-Condensation Diffusions

M. Bigerelle, J. Favregeon, T. Mathia and A. Iost 101

### Simulation of Metal/Oxide Interface Mobility: Effects of Mechanical Stresses on Geometrical Singularities

V. Optasanu, L. Raceanu and T. Montesin 109

### High Temperature Diffusion Processes at the Metal/Slag Interface

A. Bogusz and P.J. Masset 115

|                                                                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Modeling of Fractional Diffusion on a Catalytic Particle under Different Flow Conditions</b><br>A.R. Carella and C.A. Dorao                                    | 121 |
| <b>Modeling of Multi-Phase Solid State Reactions-Case of IMC Growth</b><br>M. Pawelkiewicz, M. Danielewski, J. Janczak-Rusch and B. Wierzba                       | 127 |
| <b>Fractal Dimension of Grain Boundary during Heating Comparison between Images Analyses and Monte Carlo Simulation</b><br>M. Bigerelle, J. Favergeon and A. Iost | 133 |
| <b>A Reactive Force Field Molecular Dynamics Simulation Study of Corrosion of Nickel</b><br>O. Assowe, O. Politano, V. Vignal, P. Arnoux and B. Diawara           | 139 |

### Chapter 3: Nanomaterials and Grain Boundaries

|                                                                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Structural Re-Organization Kinetics of Nanocrystalline Pt Films during <i>In Situ</i> Annealing</b><br>W. Gruber, S. Chakravarty, C. Baetz and H. Schmidt                          | 149 |
| <b>Determination of Grain Boundary Diffusion Parameters Based on Combined Analysis of Radiotracer Technique and Mössbauer Spectroscopy Data</b><br>V.V. Popov                         | 155 |
| <b>Grain Boundary Diffusion of Silver in Copper-Iron Alloys</b><br>D.V. Vaganov, S. Zhevnenko and Y. Terentyev                                                                        | 161 |
| <b>Grain Boundary Diffusion. Effect of Segregation or Concentration Dependence of Diffusivity</b><br>A. Rodin, N. Dolgoplov and S. Kryukov                                            | 165 |
| <b>About Fe Diffusion in Cu</b><br>D. Prokoshkina, A. Rodin and V. Esin                                                                                                               | 171 |
| <b>The Formation of Liquid Metal Channels Network under Grain Boundary Wetting in the Cu-Bi System</b><br>A.A. Novikov, A.L. Petelin, B.S. Bokstein, S.N. Zhevnenko and D.I. Orelkina | 177 |

### Chapter 4: Nuclear and Alternative Energies

|                                                                                                                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Surface Blistering and Flaking of Sintered Uranium Dioxide Samples under High Dose Gas Implantation and Annealing</b><br>G. Martin, G. Carlot, P. Desgardin, M. Vayer, C. Ramboz, T. Sauvage, P. Moretto, H. Khodja and P. Garcia | 185 |
| <b>A TEM Study of Bubbles Growth with Temperature in Xenon and Krypton Implanted Uranium Dioxide</b><br>A. Michel, C. Sabathier, G. Carlot, M. Cabié, S. Bouffard and P. Garcia                                                      | 191 |
| <b>Iodine Volume Diffusion Measurements in Uranium Dioxide</b><br>E. Pizzi, P. Garcia, G. Carlot, H. Palancher, S. Maillard, B. Pasquet, I. Roure, C. Pozo and C. Maurice                                                            | 197 |
| <b>Towards Measuring the Pu Self-Diffusion Coefficient in Polycrystalline <math>U_{0.55}Pu_{0.45}O_{2\pm x}</math></b><br>S. Noyau, P. Garcia, B. Pasquet, I. Roure, F. Audubert and A. Maître                                       | 203 |
| <b>Modelling Fission Gas Bubble Distribution in <math>UO_2</math></b><br>R. Skorek, S. Maillard, A. Michel, G. Carlot, E. Gilabert and T. Jourdan                                                                                    | 209 |
| <b>Molecular Dynamics Study of Grain Boundary Diffusion of Fission Gas in Uranium Dioxide</b><br>K. Govers, S.E. Lemehov and M. Verwerft                                                                                             | 215 |
| <b>Helium Behaviour in Fe-Base Materials: Thermal Desorption and Nuclear Reaction Analyses</b><br>H. Lefaix-Jeuland, S. Miro and F. Legendre                                                                                         | 221 |
| <b>Specific Aspects of Internal Corrosion of Nuclear Clad Made of Zircaloy</b><br>J.B. Minne, L. Desgranges, V. Optasanu, N. Largentou, L. Raceanu and T. Montesin                                                                   | 227 |
| <b>A Density Functional Study of Oxygen Mobility in Ceria-Based Materials</b><br>C. Frayret, A. Villesuzanne, M. Pouchard, F. Mauvy, J.M. Bassat and J.C. Grenier                                                                    | 233 |
| <b>Optimisation of Metallic Interconnects for Hydrogen Production by High Temperature Water Vapour Electrolysis</b><br>M.R. Ardigo, V. Parry, I. Popa, S. Chevalier, W. Chandra-Ambhorn, P. Phakpeetinan and Y. Wouters              | 239 |

|                                                                                                                                |     |
|--------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Development of Diffusion Coatings to Optimise the High Temperature Corrosion Resistance of Fuel Cell Reformer Materials</b> |     |
| A. Naji and M. Schütze                                                                                                         | 245 |
| <b>Elaboration of Uranium Monocarbide Samples for Diffusion Studies</b>                                                        |     |
| O. Fiquet, L. Da-Silva, F. Garcia-Ferre, M. Brothier, G. Carlot, P. Garcia, G. Martin and M.F. Barthe                          | 253 |

## **Chapter 5: Diffusion in Non Metallic Systems**

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Influence of Carbonation and Chemical Activity of Water on Coupled Moisture-Ion Transport in Cementitious Materials</b>           |     |
| X.M. Wang, M. Thiéry and V. Baroghel-Bouny                                                                                           | 263 |
| <b>Controlling the Molecular Interactions to Improve the Diffusion Barrier of Biosourced Polymers to Organic Solutes</b>             |     |
| X.Y. Fang, O. Vitrac, S. Domenek and V. Ducruet                                                                                      | 269 |
| <b>Recycling, Recovery and Improvement of Properties of Ceramic Tile Manufacturing by Adding Two Types of Glass in Clay Mixtures</b> |     |
| H. Chemani                                                                                                                           | 275 |

## **Chapter 6: Diffusion and Corrosion Processes**

|                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Diffusion in Internal Oxidation Reactions</b>                                                                                       |     |
| D.J. Young                                                                                                                             | 283 |
| <b>Determination of Diffusion Coefficients Using Thermogravimetric Measurements during High Temperature Oxidation</b>                  |     |
| P. Berthod and L. Aranda                                                                                                               | 289 |
| <b>The Transition from Internal to External Oxidation of Ni - X Wt.% Cr at 950°C</b>                                                   |     |
| A. Nicolas, E. Aublant, E. Feulvarch and K. Wolski                                                                                     | 295 |
| <b>Corrosion Behaviour of Ti-48Al-2Nb-2Cr Alloys</b>                                                                                   |     |
| B. Pelic, D. Rafaja, P.J. Masset, H.J. Seifert, L. Bortolotto, M. Schütze, G. Wolf and I. Loeh                                         | 301 |
| <b>Influence of Water Vapour on a Nickel-Based Alloy Oxidation</b>                                                                     |     |
| H. Buscail, R. Rolland, C. Issartel, F. Riffard, F. Rabaste and S. Perrier                                                             | 309 |
| <b>On the Defect Structure and Transport Properties of NiS<sub>2</sub></b>                                                             |     |
| Z. Grzesik, A. Poczekajło and S. Mrowec                                                                                                | 315 |
| <b>Kinetics and Mechanism of High Temperature Internal Oxidation of Ni-14wt%W Alloy at 1000°C</b>                                      |     |
| P. Ganster, B. Pujilaksono and K. Wolski                                                                                               | 321 |
| <b>Corrosion of Valve Steels in Combustion Gases of Diesel Engines under Thermal Shock Conditions</b>                                  |     |
| Z. Grzesik, K. Adamaszek, Z. Jurasz and S. Mrowec                                                                                      | 327 |
| <b>Influence of Water Vapour on Isothermal and Thermal Cyclic Oxidation Conditions of a Nickel-Based SY625 Steel at 1100°C</b>         |     |
| R. Rolland, H. Buscail, C. Issartel, F. Riffard, F. Rabaste and S. Perrier                                                             | 333 |
| <b>Determination of Oxygen Diffusion Coefficient in Oxidation Films of the AISI 439 Ferritic Stainless Steel</b>                       |     |
| A.C.S. Sabioni, E.A. Malheiros, V. Ji and F. Jomard                                                                                    | 339 |
| <b>Oxygen Diffusion Study in Oxidation Films of the AISI 304 Austenitic Stainless Steel</b>                                            |     |
| A.C.S. Sabioni, R.P.B. Ramos, V. Ji and F. Jomard                                                                                      | 345 |
| <b>High Temperature Corrosion Behavior of Si-Containing Alloys in the Liquid Phase of Na<sub>2</sub>SO<sub>4</sub> 25.7 Mass% NaCl</b> |     |
| T. Sudiro, T. Sano, S. Kyo, O. Ishibashi, M. Nakamori and K. Kurokawa                                                                  | 353 |
| <b>Effect of Phosphoric Acid Treatment on Isothermal High Temperature Oxidation Behaviour of AISI 304 Stainless Steel at 800°C</b>     |     |
| F. Riffard, H. Buscail, F. Rabaste, C. Issartel and S. Perrier                                                                         | 359 |

## **Chapter 7: Diffusion in Coatings and Thin Films**

|                                                                                                                                                                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Optimisation of Nickel Aluminising by CVD</b><br>P.J. Masset, A. Bogusz, J. Sieniawski, B. Wierzba and K. Tkacz-Śmiech                                                                                                                                            | 367 |
| <b>On the Influence of a Heat Treat for an Aluminizing Progress Based on Al Microparticles Slurry for Model Ni and Ni20Cr. Experimental and Theoretical Approaches.</b><br>B. Rannou, M. Mollard, B. Bouchaud, J. Balmain, G. Bonnet, V. Kolarik and F. Pedraza-Diaz | 373 |
| <b>Initial Aluminizing Steps of Pure Nickel from Al Micro-Particles</b><br>G. Bonnet, M. Mollard, B. Rannou, J. Balmain, F. Pedraza-Diaz, X. Montero, M. Galetz and M. Schütze                                                                                       | 381 |
| <b>Plasma Assisted Diffusion in Porous Materials: Experiments, Modeling and Applications</b><br>P. Brault, J.M. Bauchire, F. James and C. Josserand                                                                                                                  | 387 |
| <b>Assessment of the Gas Permeation through Thin Coated Polymeric Membranes; Improvement of the Gas Barrier Ability for Hydrogen Storage</b><br>D. Chapelle, L.P. Feng, P. Nardin and J.Y. Rauch                                                                     | 393 |
