

# Table of Contents

## Preface

### X-Ray Scattering from Metallic Multilayers

D. Rafaja 1

### Deconvolution by Example - Computational Test of Effective Algorithms

M.A. Kojdecki 12

### Deconvolution of X-Ray Diffraction Profiles Using Series Expansion: A Line-Broadening Study of Polycrystalline 9-YSZ

F. Sánchez-Bajo, A.L. Ortiz and F.L. Cumbreira 18

### Powder Pattern Decomposition with the Aid of Preferred Orientation - Use of the Whole Debye-Scherrer Ring

R. Černý 24

### Fundamental Parameters Versus Learnt Profiles Using the Rietveld Program BGMN

J. Bergmann and R. Kleeberg 30

### Structure Solution of Molecular Crystals from Powder Diffraction Data Using Genetic Algorithms: Opportunities in Academic and Industrial Research

K.D.M. Harris, R.L. Johnston, B.M. Kariuki, E. Tedesco and G.W. Turner 38

### Structure Determination by Powder Diffractometry: Internet Course

A. Le Bail, Y. Laligant and A. Jouanneaux 47

### Structure Solution from Powder Diffraction Data by a Combined Global Optimization of Several Cost Functions: Problems and Perspectives

H. Putz 53

### MEM-Based Structure-Refinement System REMEDY and its Applications

F. Izumi, S. Kumazawa, T. Ikeda, W.Z. Hu, A. Yamamoto and K. Oikawa 59

### ESPOIR: A Program for Solving Structures by Monte Carlo Analysis of Powder Diffraction Data

A. Le Bail 65

### Modelling of Atomic and Magnetic Structures from Powder Diffraction Data: Recent Developments of the RMCPOW Method

A. Møllergård and R.L. McGreevy 71

### A Re-Interpretation of the Direct Methods Sum Function

J. Rius, X. Torrelles and C. Miravittles 77

### The Limits to the Determination of Crystal Structure from Powder X-Ray Diffraction Data

X. Solans 80

### Standardless Estimation of Lattice Constants Based on Fundamental-Parameters Method

T. Ida and H. Toraya 86

### Determination of the Thermal Expansion Coefficient of Small Samples and Powders by X-Ray Diffractometry up to about 300°C: Some Results on Metals and Rocks

S. Battaglia and F. Mango 92

### Data Mining in the ICDD's Metals & Alloys Relational Database

S. Kabekkodu, G. Grosse and J. Faber 100

### PCSIWIN: A Windows-Based Index Program with Hanawalt, Fink and Alphabetic Search Capabilities for Use with the ICDD Powder Diffraction File (PDF)

J. Faber, C.A. Weth and R. Jenkins 106

### WinMProf: Visual Rietveld Software

A. Jouanneaux, X. Le Gonidec and A. Fitch 112

### WinPLOT: A Windows Tool for Powder Diffraction Pattern Analysis

T. Roisnel and J. Rodríguez-Carvajal 118

### Interlaboratory Comparison (Round Robin) of the Application of the Rietveld Method to Quantitative Phase Analysis by X-Ray and Neutron Diffraction

B. Peplinski, D. Schultze and J. Wenzel 124

### Line Profile Analysis in the Rietveld Method and Whole-Powder-Pattern Fitting

P. Scardi, Y.H. Dong and M. Leoni 132

### Calculation of Diffraction Line Profiles for Structures with Dislocations

J. Kamminga and R. Delhez 142

|                                                                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Peak-Shape Analysis Using the General Debye Equation</b><br>Y.G. Andreev and P.G. Bruce                                                                                                               | 148 |
| <b>Peculiarities of the X-Ray Powder Diffraction Patterns from FCC Crystals Containing a High Concentration of Random Deformation Stacking Faults</b><br>A.I. Ustinov, N.M. Storchak and L.O. Olikhovska | 154 |
| <b>Structural Characteristics of Disordered Lamellar Structures: Interpretation of XRD and SAXS Patterns</b><br>H. Ben Rhaïem, A. Ben Haj Amara and C.H. Pons                                            | 160 |
| <b>Peak Shift Correction for Transparency in Classical XRD Residual Stress Methods</b><br>A.C. Vermeulen                                                                                                 | 166 |
| <b>General Newly-Discovered Regularities of Structure Inhomogeneity in Textured Metal Materials</b><br>Y. Perlovich, M. Isaenkova and H.J. Bunge                                                         | 174 |
| <b>The Fullest Description of the Structure of Textured Metal Materials with Generalized Pole Figures: the Example of Rolled Zr Alloys</b><br>Y. Perlovich, M. Isaenkova and H.J. Bunge                  | 180 |
| <b>Modeling the Texture Development of Two-Phase Composites by Considering Intra-Crystalline Misorientation</b><br>R. Bolmaro, H.G. Brokmeier, A. Roatta, A.L. Fourty, M.A. Bertinetti and J. Signorelli | 186 |
| <b>Anisotropy of Secondary Extinction Coefficient in Textured Films</b><br>I. Tomov                                                                                                                      | 192 |
| <b>High Resolution X-Ray Diffraction Using Energy Resolving Detectors</b><br>D.C. Meyer, A. Seidel, K. Richter and P. Paufler                                                                            | 200 |
| <b>High-Temperature Double-Crystal X-Ray Diffractometer for In-Situ Studies, the Hotbird</b><br>A.D. Sequeira, N. Franco and J. Neves                                                                    | 206 |
| <b>Software Package for Data Acquisition and Remote Control of the High-Temperature X-Ray Diffractometer, Hotbird</b><br>N. Franco and A.D. Sequeira                                                     | 212 |
| <b>Comparison of Optical Elements for X-Ray Diffraction Analysis in Para-Focusing and Parallel Beam Geometries</b><br>C.A. Reiss                                                                         | 218 |
| <b>Polycapillary Condensing Lens: Alignment Procedures and Optical Performances</b><br>G. Cappuccio, S. Dabagov and C. Gramaccioni                                                                       | 224 |
| <b>X-Ray Powder Diffractometer with an Elliptic Focusing Göbel Mirror and Debye Scherrer Geometry</b><br>V. Psycharis, V. Perdikatsis, H. Göbel, A. Gantis and D. Loukas                                 | 229 |
| <b>Experimental Study of the Resolution Function of a Texture Diffractometer</b><br>D. Machajdík, A. Pevala, K. Fröhlich, F. Weiss and A. Figueras                                                       | 235 |
| <b>Improved Backloading for Better Results</b><br>T. Moederl                                                                                                                                             | 240 |
| <b>The Commissioning of a High Count Rate Detector on Station 2.3 at the SRS</b><br>C.C. Tang, G. Salvini and J. Groves                                                                                  | 248 |
| <b>In-Situ Studies of X-Ray Diffraction Line Profiles from Strained Copper Foils</b><br>R.W. Cheary, C.C. Tang, P.A. Lynch, M.A. Roberts and S.M. Clark                                                  | 254 |
| <b>Automated Estimations of Asymmetric Linewidth Parameters for High-Resolution X-Ray &amp; Neutron Powder Diffraction Data</b><br>R.J. Papoular                                                         | 262 |
| <b>Magnetic Structure Determination from Powder Diffraction Symmetry Analysis and Simulated Annealing</b><br>J. Rodríguez-Carvajal                                                                       | 268 |
| <b>Hydrogen Positions in KCo-, CsCo-, CsNi-, and CsCu-Tutton Salt Compounds Determined by Neutron Powder Diffraction</b><br>W.A. Kockelmann, W. Schäfer, A. Kirfel, H. Klapper and H. Euler              | 274 |
| <b>The Concept of the New Structure Powder Diffractometer (SPODI) at the FRM-II in Garching</b><br>R. Gilles, B. Krimmer, J. Šaroun, H. Boysen and H. Fuess                                              | 282 |
| <b>E9: The New High-Resolution Neutron Powder Diffractometer at the Berlin Neutron Scattering Center</b><br>D.M. Többens, N. Stüßer, K. Knorr, H.M. Mayer and G. Lampert                                 | 288 |

|                                                                                                                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Monte Carlo Simulation of the High-Intensity 2-Axis Neutron Diffractometer D20</b><br>T. Hansen and P. Convert                                                                                      | 294 |
| <b>Instrumental Resolution Function of the ESRF Powder Diffraction Beamline BM16</b><br>O. Masson, E. Dooryhée, R.W. Cheary and A. Fitch                                                               | 300 |
| <b>Temperature Resolved X-Ray Diffraction as a Tool for Studying the Recrystallization Process in Cold-Rolled Steels</b><br>L. Woning                                                                  | 308 |
| <b>Interaction of Metal Nanoparticle Surfaces with Gas Phase Studied by X-Ray Diffraction</b><br>Z. Kaszukur                                                                                           | 314 |
| <b>Amorphous-to-Crystalline Transformation of Thin ITO Films Studied by In-Situ Grazing Incidence X-Ray Diffractometry</b><br>M. Quaas, H. Wulff, H. Steffen and R. Hippler                            | 320 |
| <b>In Situ X-Ray Powder Diffraction: The Reactions of Pb(IV)-Fluoride with Ammonia and NH<sub>4</sub>F</b><br>U. Reusch and E. Schweda                                                                 | 326 |
| <b>Dynamic XRD Studies of Phase Stabilized Ammonium Nitrate during Temperature Cycling</b><br>W. Engel, H. Fietzek, M. Herrmann and P.B. Kempa                                                         | 331 |
| <b>In-Situ X-Ray and Neutron Diffraction Study of Ba<sub>2</sub>In<sub>2</sub>O<sub>5</sub></b><br>S.A. Speakman and S.T. Mixture                                                                      | 336 |
| <b>Neutron Diffraction Direct Observation of the Decomposition Processes in a Bi:Pb:Sr:Ca:Cu=1.7:0.3:2.0:2.5:3.5 Nitrate Freeze Dried Powder</b><br>G. Alexe, P. Badica, G.V. Aldica and G.M. Mironova | 340 |
| <b>Phase Transitions on Dehydration of the Natural Zeolite Thomsonite</b><br>K. Ståhl                                                                                                                  | 346 |
| <b>Formation of Nanocrystalline Re-Si Thin Film Composites</b><br>W. Pitschke, D. Hofman, A.T. Burkov, J. Schumann and A. Heinrich                                                                     | 352 |
| <b>X-Ray Diffraction Line Broadening from Gold and Platinum Thin Films</b><br>P.A. Lynch, R.W. Cheary, E. Dooryhée, N. Armstrong and C. Tang                                                           | 358 |
| <b>Co/Si/W/Si Multilayers with Enhanced Thermal Stability for Soft X-Ray and UV Optics</b><br>M. Jergel, A. Anopchenko, Š. Luby, E. Majková, R. Senderák and V. Holý                                   | 364 |
| <b>Influence of Annealing on Structural Properties of Metallic Multilayers</b><br>M. Hecker, L. van Loyen, D. Tietjen, N. Schell and C.M. Schneider                                                    | 370 |
| <b>Bulk and Surface Structure of Semifluorinated Polyesters</b><br>D. Jehnichen, D. Pospiech, A. Janke, P. Friedel, L. Häußler, A. Gottwald, S. Kummer, W. Kollig and K. Grundke                       | 378 |
| <b>C<sub>60</sub> - Polymer Nanocomposites: Evidence for Interface Interaction</b><br>C. Giusca, G. Alexe, M. Baibarac, I. Baltog, R. Manaila and A. Devenyi                                           | 383 |
| <b>Crystallinity of Urea - Formaldehyde Polycondensation Products</b><br>A. Duta, R. Tica, D. Ursutiu, C. Samoila and N. Van Landschoot                                                                | 389 |
| <b>X-Ray Diffraction Study of Cu<sub>25</sub>[AsSe<sub>1.4</sub>I<sub>0.2</sub>]<sub>75</sub> Amorphous Semiconductor</b><br>Á. Bordás, M. Vučinić, A. Kapor and B. Antić                              | 394 |
| <b>Crystal Structure and Magnetic Properties of Gd<sub>1+n</sub>Fe<sub>12-x-y</sub>Mo<sub>xy</sub> Solid Solution</b><br>N. Mattern, M. Zinkevich, H. Ehrenberg, M. Knapp and A. Handstein             | 402 |
| <b>Neutron Diffraction Study of the Magnetic Structures of Some RT<sub>2</sub>X<sub>2</sub> Compounds</b><br>A. Szytuła, M. Hofmann, J. Leciejewicz, M. Kolenda and B. Penc                            | 408 |
| <b>Neutron Powder Diffraction of Iron-Rich Rare Earth-Iron-Aluminium Intermetallics RFe<sub>7</sub>Al<sub>5</sub> (R = Tb, Dy, Ho, Er)</b><br>W. Schäfer and I. Halevy                                 | 414 |
| <b>X-Ray Diffraction Study of the Effect of a Magnetic Field on the Martensitic Transformation in Ni<sub>2</sub>MnGa Alloys</b><br>N. Glavatska and K. Ullakko                                         | 420 |
| <b>Effect of <math>\gamma\alpha</math> Transitions on the Crystal Structure of Fe-Ni Alloys</b><br>V. Bondar, V.E. Danil'chenko, P. L'Heritier and V.V. Sagaradze                                      | 426 |
| <b>Time Temperature-Transformation Diagrams of some Alloy Materials</b><br>G.D. Pigrova                                                                                                                | 430 |
| <b>X-Ray Anomalous Diffraction Study of the Crystal Structure of Y(Co,Ni)<sub>4</sub>B Compounds</b><br>C. Chacon, O. Isnard and J.F. Berar                                                            | 434 |

|                                                                                                                                                                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Influence of Structural Factors on Laser Hardening of Iron</b><br>V.E. Danil'chenko and B. Polchuk                                                                                                                                                                                  | 440 |
| <b>Distribution of Residual Stresses in the Surface Layers of Carbon Steels after Laser Treatment</b><br>V.E. Danil'chenko and B. Polchuk                                                                                                                                              | 443 |
| <b>Small-Angle Neutron Scattering Study of Potassium-Doped Tungsten Wire Samples</b><br>T. Grósz, S. Borbély, P. Harmat, A. Ioffe and L. Rosta                                                                                                                                         | 446 |
| <b>Diffraction-Line Profile Analysis - A Simple Way to Characterize Ball-Milled Mo?</b><br>I. Lucks, P. Lamparter and E.J. Mittemeijer                                                                                                                                                 | 451 |
| <b>X-Ray Analysis of the Defect Structure in Cu Subjected to Severe Plastic Deformation</b><br>A.R. Kilmametov, K. Zhang, I.V. Alexandrov, R.M. Mazitov and K. Lu                                                                                                                      | 457 |
| <b>Structural Studies of Ultrafine Grained Copper Obtained by Severe Plastic Deformation</b><br>R. Kužel, J. Čížek, I. Procházka, F. Chmelík, R.K. Islamgaliev and N.M. Amirkhanov                                                                                                     | 463 |
| <b>Crystal Structure of the High Pressure Phase of Bismuth Bi-III</b><br>O. Degtyareva, M.I. McMahon and R.J. Nelmes                                                                                                                                                                   | 469 |
