Foreword	v
Abstract	1
Glossary	3
Introduction	4
1. Known Designs of Separate Elements in Hoisting Machines	6
2. Usage of Elastomer-Cable Tractive-Carrying and Transporting Elements	13
3. Interaction of Elastomer-Cable Tractive-Carrying and Transporting Element Shell with other Elements of Hoisting and Transporting Machines	24
3.1 Influence of tangent loading	25
3.2 Determining stress-strain state of elastomer-cable tractive-carrying and transporting element from its pressure on the drum	29
4. Stress-Strain State of Elastic Shell for Rope under Tension	34
4.1 Determining a stress state of a rope shell with an unlimited number of cables using CAD methods.....	34
4.2 Analytical determination of a stress state of a rope shell with an unlimited number of cables	40
4.3 Determining a stress state of a rope shell with a minimum amount of cables using CAD methods.....	43
5. Model of Interaction for Cables in Elastomer-Cable Tractive-Carrying and Transporting Element	46
5.1 Action of longitudinal loads.....	46
5.1.1 Single-layer elastomer-cable tractive-carrying and transporting element.....	46
5.1.2 Multi-layer elastomer-cable tractive-transporting element	51
5.1.3 Influence of operational features of elastomer-cable tractive-carrying and transporting element	54
5.2 Consideration of distance change between cables	54
6. Spatial Deformation of Elastomer-Cable Tractive-Carrying and Transporting Element	59
6.1 Influence of shape of a drum operating surface	59
6.2 Giving a belt a trough shape	61
6.3 Giving a cross-section of elastomer-cable tractive-transporting element a circular shape.....	64
6.3.1 Distribution of forces in a rope constructed of several separate components	65
6.3.2 Study of influence of inclination of a hoisting machine and a conveyance load on distribution of forces in a rope.....	68
6.4 Conveyor belt turnover	73

6.5 Conveyor trace bending	74
7. Continuity Breakages of Cables.....	75
7.1 Single cable breakage.....	75
7.2 Several cable breakages	77
7.2.1 Breakages of the same cable.....	77
7.2.2 Regularly located breakages of several cables	79
7.2.3 Breakages of all cables	80
7.2.4 Partial restoration of tractive ability	87
7.2.4.1 Partial cable removal	87
7.2.4.2 Partial replacement of a broken cable.....	92
7.3 Rope of step-like design.....	102
7.4 Endless rope	106
7.5 Special purpose elastomer-cable tractive-carrying and transporting element	112
7.5.1 Belt with openings	112
7.5.2 Rope with grooves	117
7.6 Determining the boundaries of acceptability of a conditionally unlimited length of elastomer-cable tractive-carrying and transporting element	122
7.7 Combined influence of acquired spatial form of elastomer-cable tractive-carrying and transporting element and cable damage	128
8. Longitudinal Damage of Elastomer-Cable Tractive-Carrying and Transporting Element in Conveyor	131
8.1 Belt cut on a considerable length	131
8.2 Damaged part of a belt of limited length	141
8.3 Determining the influence of boundary conditions of belt loading	151
8.4 Justification of conditions of strength for a belt with a damaged elastic shell	155
8.5 Conclusions.....	159
9. Action of External Factors on Elastomer-Cable Tractive-Carrying and Transporting Element.....	160
9.1 Belt friction on a jammed roller.....	160
9.1.1 For a case of continuous belt	160
9.1.2 Case of continuous belt with cable damage.....	164
9.2 Plane-parallel vessel displacement	166
9.3 Vessel rotation in a rope plane.....	172
9.4 A generalized algorithm for determining a stress-strain state of elastomer-cable tractive-carrying and transporting element considering cable breakage and influence of external factors.....	174
10. Experimental Determination of Mechanical Characteristics of Elastomer-Cable Tractive-Carrying and Transporting Element	180
11. Influence of Deformation Nonlinearity	183

12. Control of Cable Breakages in Elastomer-Cable Tractive-Carrying and Transporting Element.....	187
12.1 Electrical resistance of elastomer-cable tractive-transporting element cables.....	187
12.1.1 Distribution of potentials in a rope without damage	187
12.1.2 Distribution of potentials in a rope with broken cable	191
12.2 Dependencies of electrical resistance on rope length	195
12.3 Technical requirements to a control system for cable breakage in elastomer-cable tractive-carrying and transporting element	198
13. Composite Stay Rope for Suspending Permanent Structures	203
13.1 Stress-Strain State of Composite Stay Rope for Suspending Permanent Structures and Their Components	203
13.2 A Model of Interaction of Rigid Fibers in an Orthotropic Composite Rope	214
13.3 Influence of Breakages of Reinforcing Elements of a Composite Orthotropic Stay Rope on its Stress State.....	220
Conclusions	229
References	231
