## Chapter 1: Properties of the Structural Materials

|                                                                                                                                                                                                                                                                       |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Waste and Discharge Sand Use of Foundry for the Manufacture of Concrete Tiles</b><br>A.V. dos Santos, M.C. Marchetti, A.R. de Souza, D.J.C. Silva, L.P. Godoy, V.A. Casarin and M.A.G. Marchetti                                                                   | 3  |
| <b>The Mechanical and Physical Properties of Construction and Demolition Waste - Epoxy Composites</b><br>M. Hyvärinen and T. Kärki                                                                                                                                    | 9  |
| <b>Fabrication of Al-Si-Mg Functional Composites Engine Cylinder and its Bench Test</b><br>X.D. Lin, C.M. Liu and J. Sun                                                                                                                                              | 15 |
| <b>Effect of Treatment of Fly Ash on Mechanical Properties of Polypropylene</b><br>P. Doddipatla and S. Agrawal                                                                                                                                                       | 20 |
| <b>Refinement Mechanism of Solidification Structure of Au-20Sn Eutectic Alloy by Different Solidification Techniques</b><br>Y. Mao, J.X. Guo and S.Y. Xu                                                                                                              | 24 |
| <b>Investigation of Flux-Less Soldering of Metal Matrix Composite and Ceramics by Use of Zn Solder</b><br>R. Koleňák and I. Kostolný                                                                                                                                  | 29 |
| <b>Characterization Investigations of a Al-5 wt.% Si/2 wt% (NbB<sub>2</sub>, NbC) Hybrid Composite Fabricated via Mechanically Alloying and Sequentially Milling (Mechanical Alloying + Cryomilling)</b><br>M.L. Öveçoğlu, E. Tekoğlu, S. Mertdinç and D. Ağaoğulları | 35 |

## Chapter 2: Surface Engineering, Thin Films and Special Coatings

|                                                                                                                                                                                                  |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Computational Prediction of Trimethylgallium Adsorption on Si(100)(2×1) in Atomic Layer Deposition</b><br>S. Sukhasena and P.P. Pansila                                                       | 43 |
| <b>Effect of Electron Bombardment on Polyimide Film</b><br>D.P. Engelhart, E. Plis, R. Cooper, S. Humagain, A. Koch, M. Brunetti, S. Greenbaum and R. Hoffmann                                   | 48 |
| <b>A Novel Preparation Method of CH<sub>3</sub>NH<sub>3</sub>PbI<sub>3</sub> Thin Films for Perovskite Solar Cell</b><br>W.L. Zhao                                                               | 54 |
| <b>Study on the Structural Analysis of Al<sub>2</sub>O<sub>3</sub> Ceramic-Lined Steel Pipe Prepared with the Gravitational Separation SHS Method</b><br>X.H. Hou, J.K. Yu, X. Yang and Z.Y. Liu | 59 |
| <b>Investigation of Changing of Chemical and Phase Composition of the Friction Surface Fe-Mn-C-B-Si-Ni-Cr</b><br>M. Pashechko, K. Lenik, K. Dziedzic and M. Barszcz                              | 65 |

## Chapter 3: Nanomaterials and Nanotechnologies

|                                                                                                                                                                                                                 |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Effect of Lattice Mismatch Strain Grading on the Electromechanical Behavior of Functionally Graded Quantum Dots</b><br>P.L. Bishay, B. Sampat, J. Sladek, E. Pan and V. Sladek                               | 71 |
| <b>A New Approach to Grow A-TiO<sub>2</sub> Nanocubes</b><br>T.S. Shyju and M. Paulraj                                                                                                                          | 76 |
| <b>Effect of ZnO Concentration on the Diameter of Electrospun Fibers from Poly(Vinyl Alcohol) Compositd with ZnO Nanoparticles</b><br>T. Jamnongkan, S. Kaewpirom, A. Wattanakornsiri and R. Mongkholrattanasit | 81 |

|                                                                                                                            |    |
|----------------------------------------------------------------------------------------------------------------------------|----|
| <b>Wet Powder Metallurgy Process for Dispersing Carbon Nanotubes and Fabricating Magnesium Composite</b>                   |    |
| J.T. Hou, W.B. Du, Z.H. Wang, X. Du and C. Xu                                                                              | 86 |
| <b>Preparation of Chitosan Antioxidant Nanoparticles as Drug Delivery System for Enhancing of Anti-Cancer Drug</b>         |    |
| H.M. Ibrahim, O.A. Farid, A. Samir and R.M. Mosaad                                                                         | 92 |
| <b>pH Effect on Characteristics and Ammonia Sensing of Silver Nanoparticles Synthesized in the Presence of Tannic Acid</b> |    |
| V. Pimpan and T. Ritthichai                                                                                                | 98 |
