

Table of Contents

Foreword	v
1. Chapter One. Introduction	1
1.1 The Importance of Solidification	1
1.2 Heat Extraction	4
1.3 Solidification Microstructures	7
1.4 Capillarity Effects	9
1.5 Solute Redistribution	10
Exercises	13
References and Further Reading	14
2. Chapter Two. Atom Transfer at the Solid-Liquid Interface	17
2.1 Conditions for Nucleation	17
2.2 Rate of Nucleus Formation	23
2.3 Inoculation, Free Growth	26
2.4 Glass Formation	30
2.5 Atomistic Modelling of Nucleation	31
2.6 Interface Structure	33
2.7 Interface Energy and Anisotropy	38
2.8 Diffuse Interface/ Phase-Field	41
2.9 Observation of Microstructure Development	43
Exercises	44
References and Further Reading	46
3. Chapter Three. Morphological Instability of a Solid/Liquid Interface	51
3.1 Interface Instability of Pure Substances	51
3.2 Solute Pile-Up at a Planar Solid/Liquid Interface of an Alloy	54
3.3 Interface Instability of Alloys	55
3.4 Perturbation Analyses	59
Exercises	63
References and Further Reading	64
4. Chapter Four. Solidification Microstructure: Cells and Dendrites	67
4.1 Constrained and Unconstrained Growth	68
4.2 Morphology and Crystallography of Dendrites	69
4.3 Diffusion Field at the Tip of a Needle-Like Crystal	72
4.4 Operating Point of the Needle Crystal - Tip Radius	77
4.5 Primary Dendrite Spacing in Directional Growth	82
4.6 Secondary Spacing after Directional or Equiaxed Growth	86
4.7 Fluid-Flow Effects	88

4.8	Fragmentation of Dendrites	94
4.9	Phase-Field	97
4.10	Dimensional Analysis of Microstructural Scales	100
	Exercises	101
	References and Further Reading	103
5.	Chapter Five. Solidification Microstructure: Eutectic and Peritectic	109
5.1	Regular and Irregular Eutectics	109
5.2	Diffusion-Coupled Growth	111
5.3	Capillarity Effects	116
5.4	Operating Range of Eutectics	118
5.5	Lamellae-Fibre Transition	122
5.6	Morphological Instability of Eutectics	123
5.7	Peritectic Growth	125
	Exercises	128
	References and Further Reading	129
6.	Chapter Six. Solute Redistribution	133
6.1	Mass-Balance in Directional Solidification	134
6.2	The Initial Transient	134
6.3	The Steady State	136
6.4	The Final Transient	137
6.5	Rapid Diffusion in the Liquid - Small Systems	137
6.6	Microsegregation	140
	Exercises	144
	References and Further Reading	146
7.	Chapter Seven. Rapid Solidification Microstructures	149
7.1	Departure from Local Equilibrium	150
7.2	Absolute Stability	154
7.3	Interface Response	155
7.4	Rapid Dendritic Growth	158
7.5	Rapid Eutectic Growth	163
7.6	Solute Redistribution	167
	Exercises	168
	References and Further Reading	169
8.	Chapter Eight. Solidification Microstructure Selection Maps	173
8.1	Equiaxed Growth of Eutectic Grains	174
8.2	Equiaxed Growth of Dendritic Grains	176
8.3	Grain Size of Equiaxed Microstructures	180
8.4	A Simple Grain Size Model Which Combines Heat Flow, Nucleation and Growth	182
8.5	Competition Between Columnar and Equiaxed Microstructures (CET)	184
8.6	Basics of Phase and Microstructure Selection in Directional Solidification	190
8.7	Phase Selection in Dendritic Growth - Stable-to-Metastable Single-Phase Transition	193

8.8	Dendrite-to-Eutectic Transition: the Coupled Zone (CZ) in Columnar Growth	195
8.9	Transition from Stable to Metastable Eutectic	198
8.10	Microstructures in Additive Manufacturing	199
	Exercises	206
	References and Further Reading	207
Appendix 1: Mathematical Modelling of Solidification at the Macroscopic Scale		213
Appendix 2: Analytical Solute and Heat Flux Calculations Related to Microstructure Formation		223
Appendix 3: Local Equilibrium at the Solid/Liquid Interface		241
Appendix 4: Nucleation Kinetics in a Pure Substance		251
Appendix 5: Atomic Structure of the Solid/Liquid Interface		255
Appendix 6: Thermodynamics of Rapid Solidification		259
Appendix 7: Analysis of Morphological Interface Stability		265
Appendix 8: Diffusion at a Dendrite Tip		277
Appendix 9: Dendrite Tip Radius and Spacing		285
Appendix 10: Eutectic Growth		297
Appendix 11: Transients in Solute Diffusion		309
Appendix 12: Mass Balance Equations		313
Appendix 13: Homogenisation of Interdendritic Segregation in the Solid State		321
Appendix 14: Introduction to the Phase-Field Method		325
Appendix 15: Relevant Physical Properties for Solidification		341
Symbols		343
 Solutions Manual		
Introduction		351
Exercises Chapter 1		353
Exercises Chapter 2		359
Exercises Chapter 3		369
Exercises Chapter 4		379
Exercises Chapter 5		393

Exercises Chapter 6	405
Exercises Chapter 7	415
Exercises Chapter 8	421
 Index	 433
