

Table of Contents

Preface

Structure and Composition of Metal/Ceramic Interfaces

M. Rühle 1

Interphase Formation and Control in Fibre Composite Materials

F.R. Jones 41

Gradient Interphase Regions in Composite Systems

J.J. Lesko, K. Jayaraman and K.L. Reifsnider 61

The Effects of Fiber Coating, Matrix Composition and Processing Conditions on Interfacial Microstructures in Vacuum Plasma Sprayed and Vacuum Hot Pressed Ti Alloy/SiC_f Composites

J.H. Li, M.L. Jenkins and B. Cantor 87

Fibre-Matrix Interface Characterization and Fibre Fragmentation Test

H.Y. Liu, L.M. Zhou, Y.W. Mai and L. Ye 121

Fibre/Polymer Tests at the Fibre Scale: Tools for Analysing and Optimizing the Composite Response to Mechanical Loads

J.-. Favre, G. Désarmot and P. Sigety 133

Interface Measurements and Applications in Fiber-Reinforced MMCs

B.S. Majumdar and D.B. Miracle 153

Evaluation of Composite Interfaces Using Raman Spectroscopy

R.J. Young 173

The Deflection of Cracks at Interfaces

W. Lee and W.J. Clegg 193

Interfacial Properties and Residual Stresses in Titanium and Titanium Aluminide Matrix Composites

D.B. Marshall, M.C. Shaw, W.L. Morris and J. Graves 209

On the Control of Interface Reaction in Squeeze Cast Aluminium Matrix Composites

A.-. Ruzette, F. Boland, C. Colin, J.M. Gilot and F. Delannay 229

The Effect of Interfaces on the Strength of Metal-Matrix Composite Joints

C.G. Levi and F.A. Leckie 241

The Fracture Mode of Ceramic/Metal Multilayers: Role of the Interface

M.C. Shaw 261

Mechanical Response of Multilayers Submitted to In-Situ Experiments

M. Ignat 279

Interfacial Behaviour and Mechanical Properties of Plastically Strained Particle Reinforced Al Composites

N. Kanetake 291

Residual Stresses in Surface Coatings and Their Effects on Interfacial Debonding

T.W. Clyne 307

The Delamination of Ceramic Laminates due to Residual Thermal Stresses

S.J. Howard, R.A. Stewart and W.J. Clegg 331

Effect of Inhomogeneous Intrinsic Stresses on the Cracking of Layered Brittle Coatings

O. Jørgensen, A. Horsewell, B.F. Sørensen and P. Leisner 351
