|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A Nanoscale Surface Structure Removal Process Using Excimer Irradiation and a Cross-Shaped Electrode Tool</b><br>P.S. Pa                                                                                                                                                                                                                       | 1   |
| <b>Pulmonary Toxicity of Well-Dispersed Single-Wall Carbon Nanotubes Following Intratracheal Instillation</b><br>Y. Morimoto, M. Hirohashi, M. Horie, A. Ogami, T. Oyabu, T. Myojo, M. Hashiba, Y. Mizuguchi, T. Kambara, B.W. Lee, E. Kuroda, K. Yamamoto, N. Kobayashi, S. Endoh, K. Uchida, T. Nakazato, K. Fujita, J. Nakanishi and I. Tanaka | 9   |
| <b>Effect of Hydrostatic Pressure on Nano Crystalline Materials Behavior</b><br>R. Jafari Nedoushan and M. Farzin                                                                                                                                                                                                                                 | 27  |
| <b>Hydrothermal Synthesis of CuS Nanostructures with Different Morphology</b><br>M. Saranya and A. Nirmala Grace                                                                                                                                                                                                                                  | 43  |
| <b>Study on Vacancy Related Defects of CdS Nanoparticles by Heat Treatment</b><br>N.S. Roshima, S. Saravana Kumar, A.U. Maheswari and M. Sivakumar                                                                                                                                                                                                | 53  |
| <b>Cysteine Interactions in Glutathione Mediated Assembly of Silver Nanoparticles in the Presence of Metal Ions</b><br>C.S. Keskin, S.Y. Keskin and A. Özdemir                                                                                                                                                                                    | 63  |
| <b>Structural, Electronic and Optical Properties of SiC Quantum Dots</b><br>J.G. Wang and P. Kroll                                                                                                                                                                                                                                                | 77  |
| <b>On the Polytypic Transformations in SiC</b><br>M. Marinova, A. Mantzari, A. Andreadou and E.K. Polychroniadis                                                                                                                                                                                                                                  | 89  |
| <b>Platinum Nanoparticles as pH Sensor for Intelligent Packaging</b><br>A.J. Martins, M. Benelmekki, V. Teixeira and P.J.G. Coutinho                                                                                                                                                                                                              | 97  |
| <b>Structure and Properties of Silver Clusters Implanted in PET by PVD Sputtering for Active Packaging Applications</b><br>M. Benelmekki, M. Torrell, E. Xuriguera, F. Vaz and V. Teixeira                                                                                                                                                        | 105 |
| <b>Molecular Dynamics Simulation of Single-Walled Carbon Nanotube – PMMA Interaction</b><br>M. Rahmat and P. Hubert                                                                                                                                                                                                                               | 117 |
| <b>ZnO Nano/Microstructures Grown by Laser Assisted Flow Deposition</b><br>J. Rodrigues, M. Peres, M.R.N. Soares, A.J.S. Fernandes, N. Ferreira, M. Ferro, A.J. Neves, T. Monteiro and F. Costa                                                                                                                                                   | 129 |
| <b>Modification and Characterization of the Surface of SOI Nanowire Sensors</b><br>O.V. Naumova, B.I. Fomin, N.F. Malyarenko and V.P. Popov                                                                                                                                                                                                       | 139 |
| <b>Arsenic Sulphide As<sub>4</sub>S<sub>4</sub> Nanoparticles: Physico-Chemical Properties and Anticancer Effects</b><br>P. Baláz, J. Sedlák, M. Pastorek, D. Cholujoová, K. Vignarooban, S. Bhosle, P. Boolchand, Z. Bujňáková, E. Dutková, O. Kartachova and B. Stalder                                                                         | 149 |
| <b>An Easy Methodology for the Incorporation of Carbon Nanotubes on Surfaces of Components Applied as Electronic Devices</b><br>M. Pérez-Cadenas, A. Maroto-Valiente, I. Rodríguez-Ramos and A. Guerrero-Ruiz                                                                                                                                     | 157 |
| <b>Development of Photocatalytic Ceramic Materials through the Deposition of TiO<sub>2</sub> Nanoparticles Layers</b><br>J.O. Carneiro, V. Teixeira, S. Azevedo, F. Fernandes and J. Neves                                                                                                                                                        | 165 |
| <b>Surface Plasmon Resonance Effect on the Optical Properties of TiO<sub>2</sub> Doped by Noble Metals Nanoparticles</b><br>M. Torrell, R.C. Adochite, L. Cunha, N.P. Barradas, E. Alves, M.F. Beaufort, J.P. Rivière, A. Cavaleiro, S. Dosta and F. Vaz                                                                                          | 177 |
| <b>Photoluminescence and Photocatalytic Properties of Nanocrystalline TiO<sub>2</sub>:Tb Thin Films</b><br>D. Wojcieszak, J. Domaradzki, D. Kaczmarek, E. Prociow, A.W. Morawski and M. Janus                                                                                                                                                     | 187 |
| <b>Hardness of Nanocrystalline TiO<sub>2</sub> Thin Films</b><br>D. Kaczmarek, J. Domaradzki, D. Wojcieszak, E. Prociow, M. Mazur, F. Placido and S. Lapp                                                                                                                                                                                         | 195 |
| <b>Si Doped and Un-Doped CrN Thin Films Produced by Magnetron Sputtering: Structural and Mechanical Properties</b><br>L. Cunha and C. Moura                                                                                                                                                                                                       | 201 |

|                                                                                                                                                                                                                                                                                 |     |
