## Preface

## Chapter 1: Development and Qualification of Materials for Additive Manufacturing

|                                                                                                                                                                                                  |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Printing and Laser Curing of Ag and Cu Paste - Prospects and Challenges in Additive Manufacturing</b><br>J. Fichtner, T. Ulrich, I. Dani, P. Dobeleit, T. Stoll and M.E. Ascheri              | 3  |
| <b>Comparison of the EHLA and LPBF Process in Context of New Alloy Design Methods for LPBF</b><br>S. Koß, S. Ewald, M. Bold, J.H. Koch, M. Voshage, S. Ziegler and J.H. Schleifenbaum            | 13 |
| <b>Efficient Qualification Strategy of New Steel Alloys for Laser Powder Bed Fusion</b><br>G. Graf, M. Neuenfeldt, T. Müller, J. Fischer-Bühner, D. Beckers, S. Donisi, F. Zanger and V. Schulze | 27 |

## Chapter 2: Materials and Technology of Powder Bed Fusion

|                                                                                                                                                                                             |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Adjusted Process Conditions in Laser Powder Bed Fusion to Obtain a Single-Crystal-Like Microstructure in IN718</b><br>A.F. Frey, C. Seyfert and P.J. Holfelder                           | 39 |
| <b>Influence of Intrinsic Heat Treatment (IHT) on Precipitation Kinetics during Laser Beam Powder Bed Fusion of Al-Mg-Sc Alloy</b><br>Y.G. Patil, L. Mertens, A. Dröse and V. Ploshikhin    | 47 |
| <b>Cellular Automata Analysis of Effects of Substrate Conditions on Microstructure and Texture Evolution during Selected Laser Melting</b><br>M.S. Mohebbi, O. Illies and V. Ploshikhin     | 57 |
| <b>DoE Applied to Thermal Analysis and Simulation of Geometrical Stability of a Wind Turbine Blade Made by Selective Laser Melting</b><br>A. RAZAVYKIA, E. Brusa, S. Ghodsieh and L. Giorio | 65 |
| <b>Simulation Aided Process Development with Multi-Spot Strategies in Laser Powder-Bed Fusion</b><br>M. Slodczyk, A. Ilin, T. Kiedrowski, J. Schmiemann and V. Ploshikhin                   | 75 |

## Chapter 3: Materials and Technology of Direct Energy Deposition

|                                                                                                                                                                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Microstructural and Mechanical Analysis of High-Performance Parts Produced by Hybrid Additive Manufacturing of Powder LMD on Forged Base Components</b><br>S. Hemes, W. Koch, R. Hama-Saleh, I. Sizova, F. Meiners, M. Mathes, M. Bambach, A. Weisheit and J.H. Schleifenbaum | 85  |
| <b>Investigating the Reproducibility of the Wire Arc Additive Manufacturing Process</b><br>C. Halisch, C. Gaßmann and T. Seefeld                                                                                                                                                 | 95  |
| <b>Laser Metal Deposition of Fe- and Co-Based Shape-Memory Alloys</b><br>N. Sommer, G. Mienert, M. Vollmer, C. Lauhoff, P. Krooß, T. Niendorf and S. Böhm                                                                                                                        | 105 |
| <b>Influence of Machine Parameters on Ti-6Al-4V Small Sized Specimens Made by Laser Metal Powder Deposition</b><br>S. Milhomme, J. Lartigau, C. Brugger, C. Froustey and L. Dufau                                                                                                | 113 |

## Chapter 4: Monitoring and Testing of Additive Manufacturing Processes

|                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------|-----|
| <b>Thermal Based Process Monitoring for Laser Powder Bed Fusion (LPBF)</b><br>D. Tyralla and T. Seefeld | 123 |
|---------------------------------------------------------------------------------------------------------|-----|

**Challenges and Approaches for Metrology of Additive Manufactured Lattice Structures by Industrial X-Ray Computed Tomography**

P. Sperling, A. du Plessis and G. Schwaderer

131

**A Data Driven Approach to the Online Monitoring of the Additive Manufacturing Process**

J. Holtmann, D. Kiefel, S. Neumann, R. Stoessel and C.U. Grosse

137
