

# Table of Contents

## Preface

### Materials Science or Materials Design

P. Bárczy 1

### Pulsed Laser Deposition of Bioglass Coatings on Dental Implants

G. Czél, R. Teghíl and D. Janovszky 9

### Examination of Formability of Cast Aluminium Alloy

Á. Csizmazia and E. Halbritter 15

### Laser Surface Treatment of Steels

G. Králik, P. Fülöp, B. Verő and D. Zsámbók 21

### Fatigue Crack Propagation Limit Curves for Different Metallic and Non-Metallic Materials

J. Lukács 31

### Laser Alloying of the Surface Layer of Al<sub>4.5</sub>Cu<sub>1</sub>Si Alloy with TiC and WC Particles

J. Sólyom, A. Roósz, I. Teleszky and B. Sólyom 37

### The Effect of Bath Al Content and Surface Roughness on Zinc Coating Properties

A. Szabó and É. Dénes 45

### Research and Development of New Martensitic Steels

I. Artinger and Z. Rózsavölgyi 51

### Development of New Coating Materials using a Laser Rapid-Alloy-Prototyping-Technique

R. Colaço and R. Vilar 57

### Stereological Characterisation of Wide Steel Strip Microstructures after Normalising and Thermomechanical Rolling

Z. Csepeli and Z. Gácsi 63

### Microwave-CVD Diamond Protective Coating for 3D Structured Silicon Microsensors

H. Csorbai, P. Fürjes, G. Hárs, C. Dücső, I. Bársony, E. Kálmán and P. Deák 69

### Test Analysis of Enhanced Lightweight Aluminium Materials

P. Détári and Á. Németh 75

### Image Measurements of Curing Polymers and a Cross-Ply Laminate

V. Gonda, C.J. Liu, C. van't Hof, L.J. Ernst and I. Koppány 79

### Nanotechnology at Present and its Promise for the Future

K. Havancsák 85

### Dynamic Models of Silicone Rubbers Based on the Synthesis Method

A. Huba and L. Molnár 95

### Modern Multi-Phase Steels for the Automotive Industry

K. Hulka 101

### Magnetic and Structural Evolution of Finemet during Special Recrystallization

R. Juhász, S. Szabó, L. Daróczi, M. Kis-Varga and D.L. Beke 111

### Effect of Additives on the Properties of Al<sub>2</sub>TiO<sub>5</sub> Ceramics

T. Korim and I. Kotsis 117

### Effect of Explosive Compaction on Microstructure and the Physical Properties of Ceramic Superconducting Materials Produced by Different Techniques

I. Kotsis, M. Enisz, A. Szalay, I. Vajda and A.G. Mamalis 121

### Properties of High-Density Amorphous Carbon Films Deposited by Laser Ablation

G. Kovách, H. Csorbai, G.Ž. Radnóczi, G. Vida, Z. Pászti, G. Pető and A. Karacs 127

### Solidification of Al-4wt.-%Cu Alloy under Non-Steady-State Conditions

J. Kovác, A. Roósz and Z. Gácsi 133

### Modern Soft Magnetic Materials

H.K. Lachowicz 139

### Development of Monotectic Surface Layers by CO<sub>2</sub> Laser

M. Svéda, A. Roósz, J. Sólyom, Á. Kovács and G. Buza 147

### Porosity Shrinkage in the Al/SiC Composite

K. Tomolya, Z. Gácsi and T. Pieczonka 153

### Investigation of the Limit Curve of the Deformability of Hypereutectic AlSiNi Alloy

T. Törköly and G. Ziaja 159

|                                                                                                                                                                                                         |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Hypereutectic RS/PM Al-Si-X Alloys</b><br>G. Ziaja and V. Stefaniay                                                                                                                                  | 165 |
| <b>A Comprehensive Study of Oxide Layers Formed during the Elaboration of Low Alloy and Electrotechnical Steel Sheets</b><br>É. Dénes and M. Kovács                                                     | 175 |
| <b>Investigation of Creep Microcavities by Scanning Electron Microscope</b><br>L. Dévényi and T. Biro                                                                                                   | 183 |
| <b>EDS-Analysis of Intermetallic Precipitation in Thermally Aged SAF 2507 Type Superduplex Stainless Steel</b><br>J. Dobránszky and P.J. Szabó                                                          | 189 |
| <b>Effect of the Enamel Firing Thermal Cycle on the Microstructure and the Hydrogen Permeability of Enamel-Grade Steels</b><br>A. Fauszt, B. Verő, R. Takács, Á. Horváth and H. Schneider               | 195 |
| <b>Metallographic Aspects of Surface-Treated Steels by using Laser Technology</b><br>E. Réka Fábrián, P. Boross, B. Verő and P. Fülöp                                                                   | 201 |
| <b>Thermal Fatigue Test of Laser Surface Treated Rollers</b><br>P. Fülöp, Z. Csepeli, O. Szabados and B. Verő                                                                                           | 207 |
| <b>The Application of Digital Image Processing to Materials Science</b><br>Z. Gácsi                                                                                                                     | 213 |
| <b>Comparison of the Properties of Galvanised Welded Joints Produced by Different Methods</b><br>B. Göblyös, S. Kőszegi and P. Varjas                                                                   | 221 |
| <b>Characterization of the Microstructure of Severely Deformed Titanium by X-Ray Diffraction Profile Analysis</b><br>J. Gubicza, I.C. Dragomir, G. Ribárik, Y.T. Zhu, R. Valiev and T. Ungár            | 229 |
| <b>An Absolute Scale for the Cohesion Energy of Pure Metals</b><br>G. Kaptay, G. Csicsovszki and M.S. Yaghmaee                                                                                          | 235 |
| <b>AFM and SEM: Competing or Complementary Techniques?</b><br>E. Kálmán, P.M. Nagy, Á. Csanády, K. Papp, H. Csorbai, C. Hunyadi and J. Telegdi                                                          | 241 |
| <b>Investigation of Bainitic Transformation of Austempered Ductile Iron (ADI)</b><br>G. Kozsely and F. Tranta                                                                                           | 253 |
| <b>Correlations between Fretting Situation and the Contact Resistivity of Electrical Connections</b><br>L. Kuzsella, P. Bárczy, S. Fouvry and P. Kapsa                                                  | 261 |
| <b>Investigation of the Relationships between Material Properties and Processing Parameters of Boron Micro-Alloyed Quenched and Tempered Steels</b><br>J. Lőrinczi, G. Králik, M. Kovács and Á. Horváth | 267 |
| <b>Micromagnetic Measurements and their Applications</b><br>I. Mészáros                                                                                                                                 | 275 |
| <b>Deforming Texture Effect on Phase Transformation in Stainless Steels</b><br>E. Nagy, V. Mertinger, F. Tranta and J. Sólyom                                                                           | 281 |
| <b>Connection between the Results of the Low-Cycle Fatigue and the Fatigue Crack Growth Tests</b><br>G. Nagy and J. Lukács                                                                              | 289 |
| <b>The Combined Application of Nanoindentation and Scanning Probe Microscopy to Materials Sciences</b><br>P.M. Nagy, Á. Csanády, B. Verő, G. Pálinkás and E. Kálmán                                     | 297 |
| <b>Theoretical Analysis of Hydrogen Permeation and Entrapment Kinetics</b><br>L. Péter, B. Almási, B. Verő and H. Schneider                                                                             | 305 |
| <b>The Role of an Anisotropy of the Elastic Moduli in the Determination of the Elastic Limit Value</b><br>J. Prohászka and J. Dobránszky                                                                | 311 |
| <b>A Phenomenological Method for the Prediction of Damage Accumulation Processes under Varying External Conditions</b><br>T. Réti and T. Kovács                                                         | 317 |
| <b>Thermodynamics-Based Semi-Empirical Description of the Liquidus Surface and Partition Coefficients in Ternary Al-Mg-Si Alloy</b><br>A. Roósz, J. Farkas and G. Kaptay                                | 323 |

|                                                                                                                              |     |
|------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Diagnostic Method for the Determination of Refractory Lining Thickness of High Temperature Equipment</b>                  |     |
| I. Szűcs, Á.B. Palotás, N. Hegman, I. Réz, M. Barth and L. Papp                                                              | 329 |
| <b>Material Structural Aspects of Micro-Scale Chip Removal</b>                                                               |     |
| M. Takács and B. Verő                                                                                                        | 337 |
| <b>Nondestructive Material Evaluation by Novel Electromagnetic Methods</b>                                                   |     |
| G. Vértesy and A. Gasparics                                                                                                  | 343 |
| <b>Modelling of a Specific Bone Replacement Material</b>                                                                     |     |
| I. Bagi and P.B. Béda                                                                                                        | 353 |
| <b>Simulation of Recrystallization by Cellular Automaton Method</b>                                                          |     |
| P. Barkóczy, A. Roósz and J. Geiger                                                                                          | 359 |
| <b>A Virtual LD-Steel-Converter</b>                                                                                          |     |
| M.Z. Benkő and G. Kaptay                                                                                                     | 365 |
| <b>A Dynamic Model of Ceramic Particle-Solidification Front Interaction</b>                                                  |     |
| Á. Borsik, K.K. Kelemen and G. Kaptay                                                                                        | 371 |
| <b>Simulation of Rod Rolling to Improve Cold Heading Qualities</b>                                                           |     |
| B. Buchmayr                                                                                                                  | 377 |
| <b>A Simplified Semi-Empirical Method to Select the Processing Parameters for Laser Clad Coatings</b>                        |     |
| L. Costa, I. Felde, T. Réti, Z. Kálazi, R. Colaço, R. Vilar and B. Verő                                                      | 385 |
| <b>Analysis of the Effect of Casting Parameters on Continuous Steel Casting</b>                                              |     |
| G. Fehérvári, M. Réger and B. Verő                                                                                           | 395 |
| <b>Virtual Fracture Surfaces</b>                                                                                             |     |
| Z. Gácsi and G. Sárközi                                                                                                      | 405 |
| <b>Nanostructure Analysis of Complex Materials using Two-Dimensional Small Angle X-Ray Scattering</b>                        |     |
| H.F. Jakob, K. Erlacher and P. Fratzl                                                                                        | 411 |
| <b>Interfacial Criteria for Producing Metal Matrix Composites and Ceramic Particle Stabilized Metallic Foams</b>             |     |
| G. Kaptay                                                                                                                    | 419 |
| <b>Principal Outcomes of the EC Thematic Network on Modelling Tools for the Forging Industry</b>                             |     |
| C.S. Kirk and A.N. Bramley                                                                                                   | 425 |
| <b>Variability of Diffusion Coefficients in the Analysis of Heterogeneous Welded Joints</b>                                  |     |
| C.S. Kirk, A. Balogh, L. Béres and A.R. Mileham                                                                              | 431 |
| <b>Finite Element Simulation of Multi-Pass Equal Channel Angular Pressing</b>                                                |     |
| G. Krallics, Z. Széles and D. Malgyn                                                                                         | 439 |
| <b>Modelling of Heat Transfer in Continuous Casting</b>                                                                      |     |
| S. Louhenkilpi                                                                                                               | 445 |
| <b>The 'In Situ' Investigation of Solidification</b>                                                                         |     |
| C. Póliska, Z. Gácsi and M. Réger                                                                                            | 455 |
| <b>Characterizing the Inner Structure of Continuously Cast Sections by Using a Heat Transfer Model</b>                       |     |
| M. Réger and S. Louhenkilpi                                                                                                  | 461 |
| <b>Topological Characterization of 2D Finite Cellular Systems</b>                                                            |     |
| T. Réti and K. Böröczky                                                                                                      | 471 |
| <b>Numerical Simulation of Dendrite Arm Coarsening in the Case of Ternary Al Alloys</b>                                      |     |
| V. Rontó and A. Roósz                                                                                                        | 483 |
| <b>The Solubility of Nitrogen and Nitrides in Ternary Liquid Iron Alloys. The Limits of the 'Solubility Product' Concept</b> |     |
| M.S. Yaghmaee and G. Kaptay                                                                                                  | 491 |
