## Preface

|                                                                                                                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Fatigue Failure under Varying Loading within Fatigue Limit Diagram</b><br>Y. Kondo, H. Eda and M. Kubota                                                                                               | 1   |
| <b>Overview of Fatigue Behaviour of Ultrafine-Grained Copper Produced by Severe Plastic Deformation</b><br>P. Lukáš, L. Kunz and M. Svoboda                                                               | 9   |
| <b>Modeling of Cracks Crossing an Interface between Dissimilar Elastic Anisotropic Materials</b><br>M. Kotoul, T. Profant, O. Ševeček and M. Krejčíř                                                      | 17  |
| <b>Microstructural Parameters in the Theory of Critical Distances</b><br>D. Taylor                                                                                                                        | 23  |
| <b>Plastic Deformation of Metallic Nanostructures</b><br>Y. Champion, S. Nowak, S. Guérin and C. Duhamel                                                                                                  | 29  |
| <b>Influence of Phosphorus Grain Boundary Segregation on Fracture Behaviour of Iron-Base Alloys</b><br>J. Janovec, J. Pokluda and P. Lejček                                                               | 33  |
| <b>Experimental Techniques in Fracture Characterization</b><br>W.R. Tyson                                                                                                                                 | 39  |
| <b>Solute and Temperature Effects on the Strain Hardening Behaviour of Mg-Zn Solid Solutions</b><br>C.H. Cáceres and A.H. Blake                                                                           | 45  |
| <b>Hysteresis, Temperature and Resistance Measurements for the Characterization of the Cyclic Deformation Behavior of Metals</b><br>F. Walther and D. Eifler                                              | 51  |
| <b>Molecular Dynamic Study of Proto-Faults Generation as an Atomistic Mechanism of Incipient Plasticity during High-Speed Loading in Ideal Crystal</b><br>S.G. Psakhie, K.P. Zolnikov and D.S. Kryzhevich | 57  |
| <b>Crack Orientation versus Ductile-Brittle Behavior in 3D Atomistic Simulations</b><br>A. Spielmannová, A. Machová and P. Hora                                                                           | 61  |
| <b>Peculiarities of Plastic Deformation and Failure of Nanoparticles of B.C.C. Transition Metals</b><br>S. Kotrechko, O. Filatov and O. Ovsjannikov                                                       | 65  |
| <b>Planar Defects on (112) in BCC Crystals</b><br>A. Ostapovets and V. Paidar                                                                                                                             | 69  |
| <b>Tensile Strength of Perfect Cubic Crystals under Superimposed Transverse Plain Stress</b><br>M. Černý and J. Pokluda                                                                                   | 73  |
| <b>Ideal Tensile Strength of Ni<sub>3</sub>Al and Fe<sub>3</sub>Al with D0<sub>3</sub> Structure</b><br>D. Legut and M. Šob                                                                               | 77  |
| <b>Monte Carlo Simulation of Normal Grain Growth in Three Dimensions</b><br>D. Zöllner and P. Streitenberger                                                                                              | 81  |
| <b>The Effect of Grain Size on the Deformation Behaviour of Selected Mg Alloys</b><br>P. Lukáč and Z. Trojanová                                                                                           | 85  |
| <b>The Effect of Mean Stress and Thermo-Mechanical Induced Stress on Micro-Crack Initiation: An Analysis Based on Experiments and DD Simulation Results</b><br>C.F. Robertson, C. Déprés and M. Fivel     | 89  |
| <b>Significance of Microdefects Induced by ECAP in Aluminium, Al-0.2%Sc Alloy and Copper</b><br>V.I. Betekhtin, A.G. Kadomtsev, P. Král, J. Dvořák, M. Svoboda, I. Saxl and V. Sklenička                  | 93  |
| <b>Simulation of the Cyclic Response of 316L Single Crystals and Polycrystal Using Three Dimensional Elastic-Plastic Crystalline Finite Element Computations</b><br>E. Ferrié and M. Sauzay               | 97  |
| <b>Microstructure-Aided Analysis of Fatigue Thresholds in Duplex Stainless Steel</b><br>J. Pokluda, T. Podrábský, K. Slámečka, Š. Hutařová and G.C. Chai                                                  | 101 |
| <b>Analysis of a Transversal Crack in a Steel Slab</b><br>J. Dobrovská, K. Stránský, F. Kavička, J. Stetina and Z. Franek                                                                                 | 105 |

|                                                                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Character of the Solidification Structure of Massive Ductile Cast-Iron Castings and its Prediction</b>                                                       |     |
| K. Stránský, J. Dobrovská, F. Kavička, J. Stetina, B. Sekanina and Z. Franek                                                                                        | 109 |
| <b>Low-Temperature and High-Temperature Anomalies in Temperature Shift of Stress-Lifetime Fatigue Curves</b>                                                        |     |
| J. Kohout and S. Věchet                                                                                                                                             | 113 |
| <b>Planar Defects and their Role in Physics-Mechanical Properties of Ordered Alloys and Intermetallides</b>                                                         |     |
| M.D. Starostenkov, E. Dudnik, G. Popova and E. Chernykh                                                                                                             | 117 |
| <b>The Half-Cycle Slip Activity of Persistent Slip Bands in Polycrystals</b>                                                                                        |     |
| A. Weidner, W. Tirschler, C. Blochwitz and W. Skrotzki                                                                                                              | 123 |
| <b>Multi-Fractal Features of Fatigue Crack Surfaces in Relation to Crack Growth Rate</b>                                                                            |     |
| Z. Sekerešová and H. Lauschmann                                                                                                                                     | 129 |
| <b>Micromechanical Dynamic Influence of Rigid Disk-Shaped Inclusion on Neighboring Crack in 3D Elastic Matrix</b>                                                   |     |
| V.V. Mykhas'kiv, O. Khay, J. Sladek, V. Sladek and C.Z. Zhang                                                                                                       | 133 |
| <b>The Analysis of the Stress and Displacement Field near the Surface Crack Tip Terminating Perpendicular to the Interface between Two Orthotropic Materials</b>    |     |
| T. Profant, O. Ševeček and M. Kotoul                                                                                                                                | 137 |
| <b>Yield Surface and Complex Loading Path Simulation of a Duplex Stainless Steel Using a Bi-Phase Polycrystalline Model</b>                                         |     |
| P. Evrard, V. Aubin, S. Degallaix and D. Kondo                                                                                                                      | 141 |
| <b>Cohesive Zone Model and GTN Model Collation for Ductile Crack Growth</b>                                                                                         |     |
| V. Kozák, I. Dlouhý and Z. Chlup                                                                                                                                    | 145 |
| <b>Influence of Crystalline Elasticity on the Stress Distribution at the Free Surface of an Austenitic Stainless Steel Polycrystal. Comparison with Experiments</b> |     |
| M. Sauzay and J. Man                                                                                                                                                | 149 |
| <b>FGM Structure Characterization by Distance Functions and Systematic Scanning Method</b>                                                                          |     |
| J. Chrapoński, M. Maliński, J. Szala and J. Cwajna                                                                                                                  | 153 |
| <b>Application of Point Sampled Intercept Method in Quantitative Description of Anisotropic Structures</b>                                                          |     |
| M. Maliński and J. Chrapoński                                                                                                                                       | 157 |
| <b>Interdiffusion and Order Fracture over Grain Boundaries in the Deformed Ni<sub>3</sub>Al Intermetallide</b>                                                      |     |
| M.D. Starostenkov, G.M. Poletaev, R.Y. Rakitin and D.V. Sinyaev                                                                                                     | 161 |
| <b>Aggregatization of Frenkel Defects in Ni and Intermetallide Ni<sub>3</sub>Al</b>                                                                                 |     |
| M.D. Starostenkov, N. Medvedev and O. Pozhidaeva                                                                                                                    | 165 |
| <b>Heterogeneous Pattern Formation at Aluminum Surface — Fourier, Morphology and Fractal Analysis</b>                                                               |     |
| Y. Gordienko, E. Z asimchuk and R. Gontareva                                                                                                                        | 169 |
| <b>Contributions to Internal Stress from Free Dislocations and from Substructure Boundaries in Dislocation Structure Formed in High Temperature Creep</b>           |     |
| A. Orlová and F. Dobeš                                                                                                                                              | 173 |
| <b>Bending and Contact Strength of a Si<sub>3</sub>N<sub>4</sub>+SiC Micro/Nano Composite</b>                                                                       |     |
| J. Dusza, M. Kašiarová, L. Hegedúsová, M. Hnatko and P. Šajgalík                                                                                                    | 177 |
| <b>Microstructure and Mechanical Behavior of Severely Deformed F.C.C. Metals</b>                                                                                    |     |
| J. Gubicza, S.V. Dobatkin, Z. Bakai, N.Q. Chinh and T.G. Langdon                                                                                                    | 181 |
| <b>Hard Nano-Crystalline Coatings for Cutting Tools</b>                                                                                                             |     |
| M. Piska                                                                                                                                                            | 185 |
| <b>Plastic Properties of Microcrystalline Mg with Ceramic Nanoparticles</b>                                                                                         |     |
| Z. Drozd and Z. Trojanová                                                                                                                                           | 189 |
| <b>Structural Non-Homogeneity and Thermal Instability of ECAP Aluminium</b>                                                                                         |     |
| I. Saxl, L. Ilucová, M. Svoboda, V. Sklenička, V.I. Betekhtin, A.G. Kadomtsev and P. Král                                                                           | 193 |
