

# Table of Contents

## **I. Industrial Robots**

### **A Low-Cost Hexa Platform for Efficient Force Control Systems Using Industrial Manipulators**

R. Osypiuk and T. Kröger 1

### **Hardware Structure of a Control Section of Manipulation Mechanism for Acoustical Measurement in Anechoic Chamber**

J. Mężyk, T. Kamisiński, A. Zbrowski and A. Flach 7

### **Structure Synthesis and Mechanical Parameters Choice for a Manipulating Mechanism for Acoustical Measurements in Anechoic Chamber**

J. Felis, A. Zbrowski, T. Giesko and J. Mężyk 13

## **II. Microrobotics**

### **Novel Type of Hybrid 3-DOF Micromanipulator with Piezoelectric Actuators – Mechanical Construction and Simulations**

D. Prusak and T. Uhl 19

### **Web-Based Synthesis of Robot Structures for Micro and Nano Manipulations**

D. Chakarov, K. Kostadinov, D. Gotseva and T. Tiankov 25

## **III. Mobile Robots**

### **Control Algorithm for Four-Wheeled Robot Motion for Monitoring Problems**

M.P. Mukhina 31

### **Control Algorithms for the Mobile Robot “MAX” on a Task of Line Following Provided by Intelligent Image Processing**

D. Kaliukhovich, V. Golovko and A. Paczynski 35

### **Control System for an All-Terrain Mobile Robot**

P. Ziemniak, D. Uciński and A. Paczynski 43

### **Design of In-Pipe Modular Robotic Systems**

M.O. Tătar and D. Măndru 49

### **GPS Based Navigation of an Autonomous Mobile Vehicle**

H. Loose, M. Zasepa, P. Pierzchala and R. Ritter 55

### **Mechatronics Engineering on the Example of a Multipurpose Mobile Robot**

M. Stania and R. Stetter 61

### **Selected Problems of Navigation of Educational Mobile Robot**

A. Grono, M. Dąbkowski, P. Niklas and G. Redlarski 67

### **Swarm-Based Approach to Path Planning Using Honey-Bees Mating Algorithm and ART Neural Network**

P. Čurković, B. Jerbić and T. Stipančić 74

### **The Behaviour Based Area Coverage of Unknown Environment by Autonomous Mobile Robot Using Modified "The Way of the Ox" Algorithm**

M. Dąbkowski, A. Grono, P. Niklas and G. Redlarski 80

## **IV. Teleoperation, Telerobotics, Teleoperated Semi-Autonomous System**

### **Intelligent Live Environment Design with Assistive Robots for Vulnerable Persons**

V. Stoian, M. Nitulescu and C. Pana 86

### **Localization of Mobile Robot Using Radio Waves**

J. Nowacki, M. Dąbkowski, P. Niklas and G. Redlarski 95

## **V. Sensors and Actuators in Mechatronics**

### **Agent-Component Design of Smart Appliances**

L. Ostaseviciute and E. Kazanavicius 101

|                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Analysis of Polar Positioning System in Laser Device for Glass Engraving</b><br>R. Trochimczuk and M. Gawrysiak                        | 107 |
| <b>Case Study of Microelectrostatic Motor</b><br>V. Bagdonas and V. Ostasevicius                                                          | 113 |
| <b>Design of Observer for Direct Current Drive</b><br>A. Petrovas, R. Rinkeviciene and S. Lisauskas                                       | 119 |
| <b>Field Determination and Calculation of Stiffness Parameters in an Active Magnetic Bearing (AMB)</b><br>B. Tomczuk and J. Zimon         | 125 |
| <b>High-Precision Gas Sensor Based on Photonic Bandgap Fiber Cell</b><br>J. Pawlat, X.F. Li, T. Sugiyama, T. Matsuo, Y. Zimin and T. Ueda | 131 |
| <b>Integrated Diagnostics of the Rotating System with an Active Magnetic Bearing</b><br>M. Gizelska, D. Kozanecka and Z. Kozanecki        | 137 |
| <b>Introductory Analysis of the Bearingless Induction Motor</b><br>Z. Gosiewski, K. Falkowski and M. Zokowski                             | 143 |
| <b>Model of Vector Controlled Induction Drive</b><br>R. Rinkeviciene and A. Petrovas                                                      | 149 |
| <b>Modelling of Magnetic Fields with the Finite Element Method in Machine Diagnostic Systems</b><br>J. Łagodziński                        | 155 |
| <b>The Pulse Power Amplifier for the Magnetic Bearing</b><br>S. Jalbrzykowski, M. Brański and K. Falkowski                                | 161 |
| <b>Three Phase AC-Line Converter for the Flywheel Energy Storage System</b><br>A. Penczek, A. Mondzik and T. Siostrzonek                  | 167 |
| <b>Tubular Linear Actuator as a Part of Mechatronic System</b><br>B. Tomczuk and A. Waindok                                               | 173 |

## **VI. Control of Mechatronic Systems**

|                                                                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A Fuzzy-Logic Based Tuning for a Velocity Controller of the DC Servo Drive</b><br>P. Dworak and K. Pietruszewicz                                                                                        | 179 |
| <b>Automatic Gear Shift Unit</b><br>J. Jantos, K. Prażnowski and J. Mamala                                                                                                                                 | 185 |
| <b>Comparison the Accuracy of the Extrapolation Methods of the Time Phase Coincidence in Synchronization of Power Generating Units</b><br>P. Niklas, A. Grono, M. Dąbkowski, G. Redlarski and M. Śliwiński | 191 |
| <b>Control Efficiency Analysis of Linear Oscillating Mechatronic Device</b><br>A. Senulis, E. Guseinovienė, V. Cirtautas, V. Jankūnas and L. Urmonienė                                                     | 197 |
| <b>Controller Design for a Rubbing Rotor</b><br>L. Ginzinger, R. Zander and H. Ulbrich                                                                                                                     | 203 |
| <b>Dependency of the Quality of the Active Vibration Damping on the Sensor and Actuator Location – Simulation and Experiment</b><br>J. Kovářová, M. Schlegel and J. Dupal                                  | 215 |
| <b>Dependent versus Independent Variable Formulation for the Dynamics and Control of Cranes</b><br>W. Blajer and K. Kołodziejczyk                                                                          | 221 |
| <b>Flight Simulator as a Tool for Flight Control System Synthesis and Handling Qualities Research</b><br>T. Rogalski, A. Tomczyk and G. Kopecki                                                            | 231 |
| <b>Fuzzy Logic Controller for Position Actuator SMA</b><br>J. Kwaśniewski and I. Dominik                                                                                                                   | 237 |
| <b>Human-Robot Interaction Controller Based on CMOS Stereo Vision and FPGA Chip</b><br>S.J. Huang and C.Y. Wu                                                                                              | 243 |
| <b>Hybrid Supervisory Control for Biomechatronic Systems for Non-Invasive Surgery</b><br>S. Chauhan, Swandito and G.G.L. Seet                                                                              | 251 |
| <b>Identification of the Inertia of Masses Flowing Water through the Pipes in Water Power Plants</b><br>G. Redlarski, A. Grono, M. Dąbkowski, P. Niklas and M. Śliwiński                                   | 258 |

|                                                                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>LuGre Friction Model Estimation of a Precision Table and Sliding Mode Control Design</b><br>S.J. Huang, C.M. Chiu and M.C. Huang                                         | 264 |
| <b>Mechatronic System Design Applied to Double Inverted Pendulum with Flywheel Actuator</b><br>L. Bláha and M. Schlegel                                                     | 272 |
| <b>Model-Based Control of SMA Actuators with a Recurrent Neural Network in the Shape Control of an Airfoil</b><br>J. Ahola, T. Makkonen, K. Nevala, T. Lindroos and P. Isto | 278 |
| <b>Multilevel Intelligent Control of Mechatronical Technological Systems</b><br>E.V. Remisov                                                                                | 284 |
| <b>Permanent Magnet Chatter Absorber with Fuzzy Logic Control</b><br>B. Broel-Plater, S. Domek and A. Parus                                                                 | 290 |
| <b>Simulation of Hydrodynamics Processes of Hydraulic Braking System of Vehicle</b><br>M. Bogdevicius, J. Janutėnienė and O. Vladimirov                                     | 296 |
| <b>The Robust Control of Magnetic Suspension with Rapidly Changing of Rotor Speed</b><br>A. Mystkowski and Z. Gosiewski                                                     | 302 |

## **VII. Analysis of Vibration and Deformation**

|                                                                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Diagnostics Modeling of Vertical Rotor Vibration</b><br>V. Barzdaitis, V. Žemaitis, R. Didžiokas and P. Mažeika                                     | 308 |
| <b>Finite Element Modeling and Simulation of Squeezed-Film Effects in a Vibrating MEMS Structure</b><br>R. Dauksevicius, V. Ostasevicius and R. Gaidys | 314 |
| <b>Frequency Domain Identification of the Active Beam Model for the Vibration Control System</b><br>Z. Gosiewski and A.P. Koszewnik                    | 320 |
| <b>Identification of Discrete Mass-Stiffness Models for Dynamic Analysis of Rotors</b><br>A. Muszyńska and D.I.G. Jones                                | 326 |
| <b>Low-Cycle Fatigue Simulation and Life-Time Prediction of High Stressed Structures</b><br>J.M. Temis, K.K. Azmetov and V.M. Zuzina                   | 333 |
| <b>Multibody and Electromechanical Modelling in Dynamic Balancing of Mechanisms for Mechanical and Electromechanical Systems</b><br>K. Lipiński        | 339 |
| <b>Random Vibrations of Constructions and their Damping</b><br>D. Gužas and A. Čiučelis                                                                | 345 |
| <b>Semi-Active Suspension Laboratory System</b><br>P. Gorczyca, K. Kołek, R. Rosół and A. Turnau                                                       | 350 |
| <b>Simulation of the Dynamic Behaviors of the C Axis Drive by the Turning Center</b><br>J. Křepela and V. Singule                                      | 356 |
| <b>Some Problems of a Diagnosis of Turbine Engine Bearings Using FAM-C Method</b><br>A. Gębura and T. Tokarski                                         | 362 |
| <b>Study of Free Vibration of Ladder Frames Reinforced with Plate</b><br>G. Aryasov and A. Petritshenko                                                | 368 |
| <b>System Analysis of Automatic Balancing (Self-Balancing) Machine Rotors with Liquid Working Bodies</b><br>V. Royzman, A. Bubulis and I. Drach        | 374 |
| <b>The Effect of Controlled Frequency and Amplitude of Vibration on Friction</b><br>J. Abdo and A. Al-Yhmedi                                           | 380 |

## **VIII. Optimization, Optimal Design**

|                                                                                                                              |     |
|------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A Computer Program Design for Optimization of a Cylindrical Traverse Grinding Operations</b><br>A.H. Marcinkevičius       | 387 |
| <b>AMB Construction Optimization Tool</b><br>A. Piłat                                                                        | 393 |
| <b>An FPGA Implementation of the Robust Controller for the Active Magnetic Bearing System</b><br>Z. Kulesza and Z. Gosiewski | 399 |

|                                                                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Design and Analysis of Elliptic Rotor Suspended in Active Magnetic Bearing</b><br>A. Piłat                                                                        | 410 |
| <b>Energy Storage System</b><br>T. Siostrzonek and S. Piróg                                                                                                          | 416 |
| <b>Modeling of the Hydraulic Machine Unit with Nonholonomic Constraints</b><br>S. Karpowicz and F. Siemieniako                                                       | 421 |
| <b>Optimal Design of Vibration Power Generator for Low Frequency</b><br>Z. Hadas, V. Singule and C. Ondrusek                                                         | 426 |
| <b>Optimal Synthesis Method for Invention of New Mechatronic Systems in Vibrotechnics</b><br>E. Lavendelis and J. Viba                                               | 432 |
| <b>Selection of Coils Parameters in Magnetic Launchers</b><br>Z. Gosiewski and M. Kondratiuk                                                                         | 438 |
| <b>Selection of a Constitutive Model Used for Prediction of Behaviour of Ring Material Expanded by Pulse Electromagnetic Field</b><br>R. Panowicz and J. Janiszewski | 444 |
| <b>Stability of Jeffcott Rotor Operating in Tilting 3-Pad Journal Bearings with Turbulent Oil Film</b><br>S. Strzelecki and S.M. Ghoneam                             | 450 |
| <b>Static Model of a Rail Launcher</b><br>Z. Gosiewski and P. Kłoskowski                                                                                             | 456 |
| <b>Synthesis of Vibrator with Air or Water Flow Excitation</b><br>J. Viba, L. Shtals, A. Vilkajs and E. Kovals                                                       | 462 |
| <b>The “Screwdriver” Technology of the Model Building for Simulating of the Processes in the Mechatronic Objects</b><br>O.V. Uzunov                                  | 468 |
| <b>Use of Electromagnetic Impulse System for Transportation of Dry Materials and Solid Bodies</b><br>V. Mironov, J. Viba and L. Shtals                               | 474 |
| <b>Vehicle Electro-Mechanical Brake System: A Mechatronic Application</b><br>N. Akkus, F. Yücel and E. Toptas                                                        | 480 |

## **IX. Integrated Diagnostics**

|                                                                                                                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Fault Identifiability Problem – The Multi-Valued Diagnostic Model Approach</b><br>H. Borowczyk                                                                                                      | 486 |
| <b>Improving the Efficiency of Diagnosing of Leaks from Liquid Transmission Pipelines by Using the New Diagnostic Information – The Signals of Weak Interactions between Objects</b><br>P. Ostapkowicz | 492 |
| <b>Possibilities of Assessment of the Control Potential of Aircraft Engines</b><br>P. Lindstedt                                                                                                        | 498 |
| <b>Presentations in FAM-C And FDM-A Methods and Some Problems of a Signals Theory</b><br>A. Gębura and W. Markiewicz                                                                                   | 504 |

## **X. Failure Analysis**

|                                                                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Energy Based Characterization of Fatigue Behaviour of Cyclically Unstable Materials</b><br>E. Macha, J. Slowik and R. Pawliczek                       | 512 |
