## Preface and Committee

## Chapter 1: Mechatronics

|                                                                                                                                              |     |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A New Coordinate Control Method for Electric Motor Regenerative Braking and ABS Coordinate</b>                                            |     |
| R.G. Wang, G.K. Shi, H.T. Chen, L.T. Zhang and C. Yu                                                                                         | 3   |
| <b>A Limited Interval Gradient Projection Algorithm for Inverse Kinematics</b>                                                               |     |
| W. Song and G. Hu                                                                                                                            | 7   |
| <b>A New Hardware-in-the-Loop Test System for Electronic Control Unit of Dual-Clutch Transmission Vehicle</b>                                |     |
| R. Chen, L. Mi and W. Tan                                                                                                                    | 13  |
| <b>A Clonal Selection Algorithm Based Optimization of Activated Sludge Process</b>                                                           |     |
| X.J. Du, X.H. Hao and P. Yu                                                                                                                  | 19  |
| <b>A Method for Path Generation of Robot Automatic Polishing Based on Bounding Box</b>                                                       |     |
| L.L. Han, Q.W. Zhang and K. Jia                                                                                                              | 24  |
| <b>A New Kind of Locking Device for Centrifuge Nacelle</b>                                                                                   |     |
| Q. Liu, Z.G. Deng and X. Xiong                                                                                                               | 29  |
| <b>A Temperature Control Method about Two-Dimensional Correlation of Infrared</b>                                                            |     |
| W.G. Li, S.S. Huang, T.G. Lin and J.X. Liu                                                                                                   | 33  |
| <b>A Multi-Channel Data Acquisition System and its Performance Analysis Method Based on FPGA</b>                                             |     |
| X.F. Zhang and H.X. Luo                                                                                                                      | 37  |
| <b>Design of PCB Engraving Machine System Based on MCU</b>                                                                                   |     |
| M. Yang, H.Q. Sun, J.H. Cui and Y.P. Shi                                                                                                     | 42  |
| <b>A New Chaos Analysis Method: Exclusion Analysis Method and its Application: Simulation and Comparison</b>                                 |     |
| P. Feng, W.J. Wang, Y. Jia, B. Sun, E.Z. Wang and G. Chen                                                                                    | 46  |
| <b>A Variant of Newton Method with Eighth-Order Convergence for Solving Nonlinear Equations</b>                                              |     |
| L. Fang                                                                                                                                      | 51  |
| <b>A Screw Dislocation Interacting with a Lip-Shaped Crack Bonded by a Strained Reinforcement Layer under Remote Longitudinal Shear Load</b> |     |
| M. Yu and Y.W. Liu                                                                                                                           | 56  |
| <b>A Circuit Model of Quantum Cascade Laser Based on a Numerical Analysis</b>                                                                |     |
| J. Yang, W. Zhou, X. Li, J. Wu and S.J. Xia                                                                                                  | 61  |
| <b>An Improved Ant Colony Optimization Algorithm Based on Immunization Strategy</b>                                                          |     |
| Y. Nan                                                                                                                                       | 66  |
| <b>A PSO-Based LQR Controller for Accelerator PWM Power Supply</b>                                                                           |     |
| X.Q. Zeng, L. Jing, Z.E. Yao and Y.H. Guo                                                                                                    | 71  |
| <b>A Rapid Vote-Counting System Based on Image Understanding</b>                                                                             |     |
| G. Xiao, J.J. Zhang, Y.M. Zhang, J.W. Lu and Z. Ye                                                                                           | 76  |
| <b>Analysis of the Effect of Rain Attenuation to the Optical Communication</b>                                                               |     |
| M. Xia, F. He and W.H. Jiang                                                                                                                 | 81  |
| <b>A Test Study of Wet Dual Clutch Transmission during Vehicle Launch</b>                                                                    |     |
| W. Sun, Y.L. Hua and G.Q. Liu                                                                                                                | 86  |
| <b>A Vehicle On-Board Alcohol Detection System Based on Integrated Multi-Sensors</b>                                                         |     |
| L. Fu and J.X. Wang                                                                                                                          | 91  |
| <b>A Wireless Head-Controlled Mouse Design Using Adaptive Unscented Kalman Filter Algorithm</b>                                              |     |
| T.Y. Gao, C.T. Shen, Z.B. Gong, J.J. Rao and J. Luo                                                                                          | 95  |
| <b>Analysis of the Key Technologies and Information Security of the 220kV Digital Information Substation</b>                                 |     |
| G.H. Cai, T.M. Song and Z.G. Wang                                                                                                            | 100 |

|                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>An Aircraft Adaptive Control Architecture Based on Nominal Controller</b><br>B. Zhang and S.S. Wang                                                                     | 105 |
| <b>A New Vanishing Point Detection Algorithm for Orthogonal Directions</b><br>M.L. Fu, C. Zhao and J.T. Cheng                                                              | 110 |
| <b>A Multilevel Feature Points Detecting Method upon Point-Octree for Point-Based Models</b><br>Y. Jiang, S.F. Hou and Y.N. Lu                                             | 115 |
| <b>An Improved Image Edge Feature Extraction Algorithm Based on Ant Colony Algorithm</b><br>L. Gui                                                                         | 120 |
| <b>Analysis of Bit Loading Algorithms in OFDM System</b><br>Y.Q. Yu, H. Yuan and F.Y. Fan                                                                                  | 124 |
| <b>Bearing Fault Diagnosis Based on Dual-Tree Complex Wavelet Transform</b><br>H. Li                                                                                       | 128 |
| <b>A Visibility Design Method Based on Virtual Maintenance in Maintainability Design</b><br>Y. Li, Y.X. Li and C. Lv                                                       | 133 |
| <b>Adaptive Subdivision Surface Reconstruction for Scattered Data in Reverse Engineering Based on GPU</b><br>Y.H. Wang and W.Y. Wu                                         | 138 |
| <b>3D Model Reconstruction of the Broken Aeroengine Blade Based on the Laplacian of Guassian Detection</b><br>M. Gong, H. Wang and L.W. Wang                               | 143 |
| <b>An Optimization Model for Aircraft Maintenance Scheduling Based on ABC Algorithm</b><br>L.P. Jiang                                                                      | 147 |
| <b>Calculation of the Branching Ratio of the Process <math>\mu \rightarrow e\gamma</math> in a Model of Electroweak-Scale Right-Handed Neutrinos</b><br>J.P. Bu and B. Jia | 152 |
| <b>A New Image Segmentation Method Based on Three-Dimensional Neural Network</b><br>G.F. Lin                                                                               | 157 |
| <b>Analysis on Fatigue Damage of Metal Rubber Vibration Isolator</b><br>F.L. Cao, H.B. Bai, J.C. Yang and G.Q. Ren                                                         | 162 |
| <b>Computation and Analysis of Frost Formation on Ground Aircraft</b><br>L.W. Wang and D.D. Xu                                                                             | 166 |
| <b>Analysis of Water Jet Trajectory of Auto-Targeting Fire Sprinkler System in Interior Large Space</b><br>M. Long, G.L. Hu and Z. Li                                      | 171 |
| <b>Aero-Engine Condition Monitoring Based on Kalman Filter Theory</b><br>Y. Gao and N. Wang                                                                                | 176 |
| <b>Application of MATLAB in Digital Signal Processing</b><br>C. Liao, Y.M. Song, W.W. Yue, D.B. Zhou and D.P. Liu                                                          | 182 |
| <b>Analysis on Automobile Engine Failure Diagnosis Based on Genetic Algorithm</b><br>J. Gu                                                                                 | 186 |
| <b>Application of PID Control Algorithm Based on Improved BP Neural Network to Turntable System</b><br>Y. Feng and Q.J. Xu                                                 | 191 |
| <b>Analysis of Hydraulic Regenerative Braking System for Electric Vehicle</b><br>X.B. Ning, Y.T. Xu, Q.C. Wang and J.J. Chen                                               | 195 |
| <b>A Discrete Particle Swarm Optimization Approach to Optimize the Assembly Sequence of Mechanical Product</b><br>Z.B. Zhang and C.Y. Huang                                | 203 |
| <b>Design of Audio Signal Testing and Analysis System Based on Virtual Instrument</b><br>N.Q. Zhou                                                                         | 208 |
| <b>Design of Electromagnetic Heating Control System with Rotational Scanning in Plastic Machinery</b><br>W.G. Kong, L.R. Li and M.L. Yu                                    | 213 |
| <b>Aero-Engine Vibration Fault Diagnosis Based on Harmonic Wavelet</b><br>T. Xu, Y. Jin and J. Xu                                                                          | 218 |
| <b>Application of Extendable Optimal Degree Method in Evaluation of the Gun Maintenance Process Quality</b><br>F.H. Tao, S.A. Wang and X.H. Bai                            | 223 |

|                                                                                                                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Analysis on Draghead Teeth of Drag Suction Hopper Dredgers Based on the Theory of Fuzzy Reliability</b><br>C.Q. Liu and J.F. Chen                                                                                                     | 228 |
| <b>Mechanism Study on the Grading of the 5BF-3 Fruits Grading Machine</b><br>X.R. Zhou                                                                                                                                                   | 233 |
| <b>Design and Research of Anti-Interference for Control System of Automatic MIG Welding Machine</b><br>J.H. Song                                                                                                                         | 238 |
| <b>Design of the Digital Phase Meter with GPIB Interface Based on FPGA</b><br>H. He, Y.N. Qi, Z.H. Zhang and B.S. Yu                                                                                                                     | 243 |
