## Preface

## Chapter 1: Properties of Structural Alloys

|                                                                                                                                                                                             |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Microstructures, Simulations and Solidification Behaviors of A356 Semisolid Aluminium Alloy Prepared by Stirring Integrated Transfer-Heat Technology under Different Cooling Mediums</b> |    |
| Z.Y. Qiu, B. Zhou, S. Lu, K.P. Chen, C. Xu and Z.Y. Wang                                                                                                                                    | 3  |
| <b>Correlating the Annealing Temperature Dependence of the Structural Inhomogeneity and the Diffusion in Zr-Ti-Cu-Ni-Be Glassy System</b>                                                   |    |
| M. Aniya                                                                                                                                                                                    | 11 |
| <b>Recent Progress in Research of Metal Melt Structure</b>                                                                                                                                  |    |
| S. Zhang and Y.D. Zeng                                                                                                                                                                      | 17 |
| <b>Effect of Rare Earth Ce on the Growth of Primary <math>Al_{13}Fe_4</math> Phase in Al-5Fe Alloy</b>                                                                                      |    |
| P. Liu, Y.D. Zeng and J. Zhang                                                                                                                                                              | 25 |

## Chapter 2: Metals Processing Technologies

|                                                                                                                                                                                                                          |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Study on Single Point Incremental Forming with the Roller Ball Tool for Increasing the Part Quality</b>                                                                                                               |    |
| T.D. Thanh and P.S. Minh                                                                                                                                                                                                 | 33 |
| <b>Study on Rubber-Pad Formation for Sheet Metal</b>                                                                                                                                                                     |    |
| M.T.U. Tran, T.V.A. Duong, H.T. Nguyen and V.P. Nguyen                                                                                                                                                                   | 39 |
| <b>Modeling Process of Manufacturing Parts Using Incremental Forming Process</b>                                                                                                                                         |    |
| N. Kosimov, B. Krishna Singh, S.J. Li, W.N. Chen, J. Moon and D.W. Jung                                                                                                                                                  | 45 |
| <b>Numerical Analysis of Nucleation and Growth of Stray Grain Formation during Laser Welding Nickel-Based Single-Crystal Superalloy Part III: Kinetic and Thermodynamic Obviation of Solidification Cracking</b>         |    |
| Z.G. Gao                                                                                                                                                                                                                 | 51 |
| <b>Numerical Analysis of Nucleation and Growth of Stray Grain Formation during Laser Welding Nickel-Based Single-Crystal Superalloy Part II: Solidification Cracking Diminution through Single-Crystallinity Control</b> |    |
| Z.G. Gao                                                                                                                                                                                                                 | 61 |
| <b>The Influence of Diffuse Element in Solid-State on Dissimilar Joint between Semi-Solid Cast 7075 with 6061 Al Alloy by Diffusion Welding</b>                                                                          |    |
| C. Meengam, Y. Dunyakul, S. Chainarong and D. Maunkhaw                                                                                                                                                                   | 71 |
| <b>Formability of Aluminum in Incremental Sheet Forming</b>                                                                                                                                                              |    |
| B. Krishna Singh, W.N. Chen, S.J. Li and D.W. Jung                                                                                                                                                                       | 77 |

## Chapter 3: Polymers, Composites and Ceramics

|                                                                                                                                                               |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Effect of Bentonite Using Edible Oil as a Dispersed Medium on the Rheological, Thermal and Water Absorption Properties of PBS/Bentonite Composites</b> |     |
| A. Wiriya-Amornchai, R. Ausab, N. Jemkuntod and S. Phattarateera                                                                                              | 85  |
| <b>Study on the Highe-Temperature Mechanical of <math>Al_2O_3/SiO_2</math> and <math>SiO_2/SiO_2</math> Ceramic Matrix Composites</b>                         |     |
| J.L. Ci, F.D. Cui, L.L. Zhang, J. Zhang, Y. Lv, Y.M. Zhao and H. Zhang                                                                                        | 91  |
| <b>Design and Performance of Polystyrene Modular Composite Dismantling-Free Formwork</b>                                                                      |     |
| J.S. Zhang, A.Z. Sun and Q.L. Zeng                                                                                                                            | 99  |
| <b>Preparation and Properties of Environmental-Friendly Ceramsite and Concrete</b>                                                                            |     |
| J.S. Zhang, X. Luan and X.N. Chen                                                                                                                             | 107 |

|                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Failure Mechanism Analysis of Bonded Joint with Fiber Reinforce Plastic (FRP) Sucker Rod in Offshore Reservoirs</b> |     |
| Y.W. Zhang, H.X. Wang and J.Q. Che                                                                                     | 113 |
| <b>Fracture Resistance and Failure Mode of Different Type of Ceramic Crowns</b>                                        |     |
| L.X. Zhang and Y.X. Liu                                                                                                | 119 |
| <b>Effect of Vibrations on the Weld-Line Strength of Injection Molded Products</b>                                     |     |
| P.S. Minh and T.V.A. Duong                                                                                             | 125 |

## **Chapter 4: Materials for Application in Electronics and Devices of Energy Conversion and Storage**

|                                                                                                                                                                                              |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Preparation and Electrochemical Performance of <math>\text{Li}_4\text{Ti}_5\text{O}_{12}/\text{Co}_3\text{O}_4</math> Composite as an Anode of Lithium-Ion Battery</b>                    |     |
| M. Wang, H.L. Bao, L. Du, P.T. Qi and X.M. Zhang                                                                                                                                             | 133 |
| <b>Preparation and Electrochemical Performance of <math>\text{Li}_4\text{Ti}_5\text{O}_{12}/\text{SnO}_2</math> Composite as an Anode of Lithium-Ion Batteries</b>                           |     |
| M. Wang, L. Du, P.F. Fang, H.L. Bao and J.T. Huang                                                                                                                                           | 139 |
| <b>Preparation of Non-Enzymatic Glucose Sensing Nanocomposite Based on <math>\text{NiCo}_2\text{O}_4</math> Nanosheets@ Reduced Graphene Oxide and Design of Glucose Detection System</b>    |     |
| M. Dong, H.L. Hu and Y.L. Duan                                                                                                                                                               | 145 |
| <b>Modulation of Operating Cut-Off Frequency by Spin Pinned of <math>\text{Fe}/\text{Ni}_{81}\text{Fe}_{19}/\text{Fe}</math> Heterogenous Multilayer Films with Different Fe Thicknesses</b> |     |
| Z.S. He, C.J. Wu, Y.F. Wang, X.N. Jiang, Z. Yu, Z.W. Lan and K. Sun                                                                                                                          | 153 |

## **Chapter 5: Technologies for Chemical Production**

|                                                                                                                                               |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Research Development on Separation and Extraction of Selenium and Mercury</b>                                                              |     |
| Q. Feng, A.J. Li, Y.F. An, B. Zhang and Y.Q. Zhao                                                                                             | 161 |
| <b>Size-Controlled C/N-Doped <math>\text{TiO}_2</math> Nanoparticles for Visible-Light-Driven Photocatalysis of Formaldehyde from Plywood</b> |     |
| X.Y. Yan, G.B. Zhang, R.H. Yuan, X.Y. Ye, X.X. Chen and H.H. He                                                                               | 169 |
