## Preface

|                                                                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Comparative Study from Drop-Tube Experiments and Ab-Initio Calculations of the Nucleation of the <math>\sigma</math> Phase in the Re-W and Re-Ta Systems during Solidification far from Equilibrium</b> |     |
| C. Berne, A. Pasturel, E. Rolland and B. Vinet                                                                                                                                                             | 3   |
| <b>A Unified Landau-Ginzburg Model of Undercooling and Superheating of Crystal-Melt Transition</b>                                                                                                         |     |
| M. Iwamatsu                                                                                                                                                                                                | 9   |
| <b>Structural Stability in Nanocrystal ZnS</b>                                                                                                                                                             |     |
| J.Z. Jiang, L. Gerward, J.S. Olsen, D. Frost, R. Secco and J. Peyronneau                                                                                                                                   | 15  |
| <b>Diffusion in Amorphous Alloys and Grain Boundaries: The Correlation between <math>D_0</math> and <math>Q</math></b>                                                                                     |     |
| V. Naundorf, M.P. Macht, A.S. Bakai and N. Lazarev                                                                                                                                                         | 21  |
| <b>Grain-Size Refinement in Al-Mn-Ce Rapidly-Quenched Alloys</b>                                                                                                                                           |     |
| R. Nicula, A. Jianu, G. Holzhüter, T. Barfels and E. Burkel                                                                                                                                                | 27  |
| <b>Electron Microscopy and Synchrotron Radiation Powder Diffraction Study of Icosahedral Ti-Zr-Ni Alloys</b>                                                                                               |     |
| F. Vasiliu, A. Jianu, R. Nicula and E. Burkel                                                                                                                                                              | 33  |
| <b>Experimental Determination of the Formation Enthalpies of Al-Y and Al-Y-Ni Amorphous Alloys</b>                                                                                                         |     |
| I.A. Tomilin, A.A. Turchanin, S.A. Dogel, J. Latuch and T. Kulik                                                                                                                                           | 37  |
| <b>Anomalies of Mechanical and Physical Properties of the <math>\text{Fe}_{83}\text{B}_{17}</math> Eutectic Metallic Glass and their Connection with the Peculiarities of Nanoclusterous Structure</b>     |     |
| V.Z. Bengus, A. Beznosov, V. Desnenko, V.V. Eremenko, E. Fertman and E.D. Tabachnikova                                                                                                                     | 43  |
| <b>Nonequilibrium Processing of Polymeric Materials by Mechanical Attrition</b>                                                                                                                            |     |
| C.C. Koch, A.P. Smith, C. Bai, R.J. Spontak and C.M. Balik                                                                                                                                                 | 49  |
| <b>On the Size Effects in Fullerite Nanoparticles</b>                                                                                                                                                      |     |
| V.I. Zubov, J.N. Teixeira Rabelo and I.V. Mamontov                                                                                                                                                         | 57  |
| <b>Solid-State Formation of Carbon and Boron Nitride Nanotubes</b>                                                                                                                                         |     |
| Y. Chen, L.T. Chadderton, J.S. Williams and J. Fitz Gerald                                                                                                                                                 | 63  |
| <b>Multi-Wall Nanotubes: Stability and Properties</b>                                                                                                                                                      |     |
| M. Damnjanović, T. Vuković and I. Milošević                                                                                                                                                                | 68  |
| <b>Symmetry Based Analyses of Optical Activity of Single- and Double-Wall Carbon Nanotubes</b>                                                                                                             |     |
| I. Milošević, M. Damnjanović and T. Vuković                                                                                                                                                                | 73  |
| <b>Ferromagnetic Bulk Glassy Alloys with Useful Engineering Properties</b>                                                                                                                                 |     |
