

Table of Contents

Table of Contents

Preface

Abbreviations

1. Introduction to Biomineralization and Biomaterials

1.1 Biological Mineralization. 1.2. Mechanism of Biomineralization	1
1.3. <i>In Vitro</i> Systems for Studying Biomineralization	10
1.4. Materials Commonly Used as Biomaterials	11
1.5. Review of Methods for the Surface Modification of Biomaterials	15

2. Experimental Approach

2.1. Choice of Materials	18
2.2. Crystallization Medium. Hydroxyapatite Growth on Solid Surfaces by Prolonged Soaking in an Aqueous Solution	20
2.3. Surface Modification of Materials	23

3. Hydroxyapatite Growth on Modified Surfaces by Using the Two Approaches: Results and Discussion

3.1. Prolonged Soaking in a Supersaturated Calcium Phosphate Aqueous Solution	48
3.2. Novel Process for Hydroxyapatite Growth: Simultaneous Laser-Liquid-Solid Interaction	77
3.3. Nanostructured Surfaces as a Template for Hydroxyapatite Growth by Applying Prolonged Soaking and Laser-Liquid-Solid Interaction Processes	92
3.4. Bioactivation of Porous Silicon by Deposition of Hydroxyapatite Using the Two Approaches	97
3.5. Influence of Organic Substances on the Process of Biomineralization	100

4. Summary and Conclusions

5. Acknowledgements
