CONTENTS

PREFACE

1. INTRODUCTION	1
2. THE NUCLEATION THEORY. 2.1 Nucleation and Transformations: from a Single Nucleus to a Large Volume Transformed.	4
2.2 The Classical Theory	6
2.3 Nucleation of Metastable Phases	27
2.4 Alternative Approaches	28
3. THERMOPHYSICAL PROPERTIES IN THE DESCRIPTION OF NUCLEATION. 3.1 The Free Energy Difference, ΔG, between Undercooled Melts and Crystal Phases	32
3.2 The Interfacial Free Energy: σ	43
3.3 The Diffusion Coefficient in the Undercooling Regime	48
