

# Table of Contents

## Foreword

<b>Raman Spectroscopy Applied to the Study of Phase Transitions</b> E. Husson	1
<b>ESR and NMR in Non-Conducting Solids</b> A. Deville and B. Gaillard	41
<b>Relaxor Ferroelectric Complex Perovskites: Structure, Properties and Phase Transitions</b> Z.G. Ye	81
<b>Properties and Phase Transitions in <math>\text{PbZr}_{1-x}\text{Ti}_x\text{O}_3</math> (PZT)</b> K. Roleder	123
<b>Modulated Structures Associated with Charge-Density Waves</b> A.M. Ghorayeb	159
<b>Oxide-Ion and Protonic Solid Electrolytes</b> A. Pawłowski and B. Hilczer	199
<b>Phase Transitions in <math>\text{VO}_2</math> Polymorphs and Related Physical Properties</b> C. Cesari, C. Leroux and G.E. Nihoul	227
<b>Nanometric Amorphization of Oxide Materials under Dense Electronic Excitation: Swift Heavy Ion Irradiations</b> M. Toulemonde and F. Studer	267
<b>The Structural Principles and Their Consequences for the Anion-Deficient Fluorite-Related Oxides of the Higher Rare Earths</b> Z.C. Kang and L. Eyring	301
<b>Transmission Electron Microscope Study of Defect Structures Accomodating Non-Stoichiometry in Rutile</b> M.G. Blanchin	359
<b>Structure and Superconductivity of the Bi-, Tl- and Hg-Cuprates</b> P. Bordet	383
<b>Conductivity of Layered Superconducting Crystals in the Normal State: Case of <math>\text{Bi}_{2+x}\text{Sr}_2\text{Ca}_{1-y}\text{Cu}_2\text{O}_{8+\delta}</math> - Importance of the Oxygen and Cationic Concentrations, Role of Superconductive Fluctuations Above <math>T_c</math></b> C. Boulesteix, T. Badoche, Y. Marietti, O. Monnereau and V. Grachev	413
<b>Magnetoelectric Phenomena in <math>\text{R}_2\text{CuO}_4</math> Rare-Earth Cuprates</b> H. Wiegmann, I.M. Vitebsky, A.A. Stepanov, A.G.M. Jansen and P. Wyder	429
<b>Phase Transitions in Multiphase Composites. Modellings of Interface Reactivity and of Transport Properties</b> J.R. Gavarrí, L. Tortet and J. Musso	447
