

# Table of Contents

## Preface, Conference Organization and Scientific Board

## Chapter 1: Invited Lecture

### Laser Centre ELI, Dolni Brezany

J. Koukal, L. Kostkova, M. Mazurova and J.L. Vitek 3

### Construction of the First Footbridge Made of UHPC in the Czech Republic

P. Koukolík, J.L. Vitek, R. Brož, R. Coufal, M. Kalný, J. Komanec and V. Kvasnička 8

## Chapter 2: Properties and Production Technologies of Concretes

### Study of Properties of Concrete for Water-Tight Tunnel Lining

A. Hubáček, T. Jarolím and P. Macháňová 17

### Diffusion of Chloride Ions in Ultra High Performance Concrete

D. Dobiáš and R. Pernicová 21

### The Influence of Age and Temperature on the Bond Behaviour between Prestressing Strands and UHPC

D. Čítek, T. Mandlík, J. Kolísko, J.L. Vitek and S. Řeháček 25

### Possible Synergism of High Temperature Fly Ash and Fluidized Bed Combustion Fly Ash in Cement Composites

D. Orsakova, R. Hela, P. Novosad and J. Valek 29

### Effect of Lightweight Concrete Density on Bond Strength

J. Kadlec, I. Terzijski, F. Girgle and L. Žvolánek 33

### Mechanical Properties of Cement Composites with Alternative Binders

K. Šeps and I. Broukalová 37

### Measurement of Set Fibre-Concrete Homogeneity in Finished Steel Fibre-Concrete Structure of Segmental Tunnel Lining

L. Hobst, J. Vodička, P. Bílek and J. Vala 41

### Influence of Recycled Aggregate Quality on Recycled Concrete

M. Šefflová and T. Pavlů 45

### Testing of Concrete and Fibre Reinforced Concrete in Uniaxial Tension

M. Tipka and J. Vašková 49

### Options for Improving the Workability of High Performance Concrete

M. Ženíšek, T. Vlach and L. Laiblová 53

### Influence of Ground Clay Brick on the Properties of Fresh and Hardened Self Compacting Lightweight Concrete (SCLC)

S. Juradin and K. Grbeša 57

### Environmental Assessment of Recycled Aggregate

T. Pavlů, V. Kočí and M. Šefflová 61

### Influence of the Amount of Dispersed Suspension of Carbon Nano-Tubes on Physico-Mechanical Properties of Cement Mortar

T. Jarolím, R. Hela and M. Labaj 65

### Numerical Simulation of Cohesion Influence of Textile Reinforcement on Bending Performance of Plates Prepared from High Performance Concrete (HPC)

T. Vlach, A. Chira, L. Laiblová, C. Fiala, M. Novotná and P. Hájek 69

### Edit the Properties of the Fresh Concrete Admixing Additives and Steel Fibres

V. Suchánek and M. Slováček 73

### Experimental Analysis of the Proposed High-Strength Concrete

V. Suchánek and M. Radouš 77

### Possibilities of Nanoparticle Application in Concrete Technology

R. Hela and M. Labaj 81

## **Chapter 3: Research and Designing of Structural Elements from Concrete**

|                                                                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Measuring the Deflection of Reinforced Concrete Slab</b><br>B. Pálení, A. Stará, R. Kratochvíl and M. Zich                                                                                              | 87  |
| <b>Application of Probabilistic Methods for the Assessment of Structural Load Bearing Capacity</b><br>J. Doležal, M. Šomodíková, D. Lehký and D. Novák                                                     | 90  |
| <b>Optimization of Pretensioned Steel Fiber Reinforced Concrete Beam</b><br>J. Novák and A. Kohoutková                                                                                                     | 94  |
| <b>Design and Evaluation of the Method of Parameterization of the Force-Deflection Diagram of FRC</b><br>M. Kovar and M. Foglar                                                                            | 98  |
| <b>Experimental Verification of Precast Dapped-End Beams</b><br>M. Hasa and M. Zich                                                                                                                        | 102 |
| <b>Fracture-Mechanical Parameters for Modeling of Quasi-Brittle Materials and Structures</b><br>R. Pukl, T. Sajdlová, D. Novák and D. Lehký                                                                | 106 |
| <b>Structural Design and Experimental Verification of Precast Columns from High Performance Concrete</b><br>C. Fiala, J. Hejl, V. Tomalova, V. Bílek, T. Pavlu, T. Vlach, M. Volf, M. Novotna and P. Hájek | 110 |
| <b>Concrete Precast Panel for Noise Barrier of New Generation</b><br>V. Vacek, J. Kolísko, J. Tichý and R. Cvancigerová                                                                                    | 114 |
| <b>Analytical and Statistical Evaluation of FRC Bending Tests Layouts</b><br>A. Podstawka, M. Kovar, M. Foglar and V. Kristek                                                                              | 118 |
| <b>Experimental Research of Shrinkage in Thick Concrete Elements</b><br>J.L. Vítek, D. Čítek and P. Tej                                                                                                    | 122 |
| <b>Analytical Description of Punching-Shear Resistance of Concrete Specimens Subjected to close Blast</b><br>J. Stohr and M. Foglar                                                                        | 128 |
| <b>Theoretical and Experimental Research of a Frame Structure with Articulated Joints</b><br>J. Witzany, D. Makovička, R. Zigler, T. Čejka, S. Urushadze and A. Polák                                      | 132 |
| <b>Testing the Long-Term Flexural Behaviour of FRC with Synthetic Fibres</b><br>J. Fládr and I. Broukalová                                                                                                 | 136 |
| <b>Experimental Analysis of Reinforcement Corrosion on Bond Behaviour</b><br>J. Bilčík and I. Holly                                                                                                        | 140 |
| <b>Fibre-Concrete Tubes in Pure Shear Mode</b><br>L. Kadlec, V. Ráček, V. Křístek and J.L. Vítek                                                                                                           | 144 |
| <b>Monitoring the Degradation of UHPC Boards with Textiles Armatures</b><br>M. Kostelecká                                                                                                                  | 148 |
| <b>Precast Floor Plates from Lightweight Concrete</b><br>M. Hubertová and P. Hladík                                                                                                                        | 152 |
| <b>Production and Properties of Functionally Graded UHPFRC Beams</b><br>M. Rydval, P. Huňka and J. Kolísko                                                                                                 | 156 |
| <b>High-Performance Concrete for Thin-Walled Members</b><br>P. Bílý, J. Fládr, A. Kohoutková, I. Broukalová and V. Brejcha                                                                                 | 160 |
| <b>Field Testing of Concrete Members Subjected to Contact and Adjacent Blast</b><br>R. Hajek, M. Kovar, M. Foglar, J. Pachman and J. Štoller                                                               | 164 |
| <b>The Effective Cross-Section Thickness and its Effect on Shrinkage</b><br>R. Hofírek and M. Zich                                                                                                         | 168 |
| <b>Developing Fire Resistant Construction for Tunnel Construction Using Lightweight Aggregate Concrete</b><br>V. Junek, J. Kolísko, M. Kroc and I. Bradáčová                                               | 172 |
| <b>Analysis of Secondary Effects and Bond Behavior due Prestressing</b><br>J. Laco, P. Pažma and J. Halvonik                                                                                               | 177 |

## Chapter 4: Technologies of Bridge Engineering

|                                                                                                                                                                                             |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Bridge over Canal Laranjeiras, Laguna, Brazil</b><br>R. Novák, J. Stráský, P. Kocourek and L. Šopík                                                                                      | 183 |
| <b>Cable Stayed Bridge Avenida Prudente de Moraes, Natal, Brazil</b><br>R. Novak and P. Kocourek                                                                                            | 187 |
| <b>Reconstruction of the Reinforced-Concrete Railway Bridge in km 3,668 – Argentinská of the Track Bubenec – Holesovice in Prague</b><br>J. Sýkora, M. Hacaperka, J. Lukeš and S. Rosenthal | 191 |
| <b>Concrete Pavements on Bridges</b><br>B. Slansky and J. Šrůtka                                                                                                                            | 195 |
| <b>Effects of Creep and Shrinkage on an Integrated Arch Structure</b><br>B. Slansky, R. Nečas and J. Stráským                                                                               | 199 |
| <b>Experimental Verification of Plan Curved Arch Structures</b><br>D. Hochman, J. Trenz, R. Nečas and J. Stráským                                                                           | 203 |
| <b>Plate-Element Numerical Model of a Bridge across the Hostovsky Creek</b><br>B. Slansky and M. Zich                                                                                       | 207 |

## Chapter 5: Codes, Standards, Certifications

|                                                                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Punching Resistance of Flat Slabs without Shear Reinforcement</b><br>J. Hanzel, L. Majtánová and J. Halvonik                                                        | 213 |
| <b>Calculation of the Minimum Reinforcement for Limitation of Crack Width According to Change of National Annex for ČSN EN 1992-1-1</b><br>J. Šmejkal and J. Procházka | 217 |
| <b>Design of Flat Slabs Height</b><br>Ľ. Fillo, J. Labudková and J. Hanzel                                                                                             | 221 |
| <b>Impact Testing of Concrete Using a Drop-Weight Impact Machine</b><br>S. Rehacek, P. Hunka, D. Čítek, J. Kolisko and I. Simunek                                      | 225 |
| <b>Overall Reliability of the Concrete Columns in Case of Stability Loss</b><br>V. Benko, P. Kendický, M. Krizma, M. Kišac and I. Beleš                                | 229 |
| <b>Punching Analysis of a Flat Slab with a Change in Elevation</b><br>J. Nováček and M. Zich                                                                           | 233 |
