## Preface

## Chapter 1: Structure Formation, Melting, Analysis of Solidification

|                                                                                                                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Role of Compounds in Graphite Formation in Cast Iron - A Review</b><br>I. Riposan, M. Chisamera and S.C. Stan                                                                                | 3   |
| <b>Effect of Cooling Rate on the Eutectoid Transformation in Compacted Graphite Cast Iron</b><br>J. Lacaze, Y. Thébault, A. Freulon and W.L. Guesser                                                | 12  |
| <b>Effect of Cooling Rate and Aluminium Addition on Graphite Growth during Solidification and Graphitization</b><br>J. Bourdie, F. Bruneseaux, P. de Parseval, S. Gouy, L. Laffont and J. Lacaze    | 20  |
| <b>Evolution of Shrinkage with Carbon Equivalent and Inoculation in Ductile Cast Irons</b><br>A. Regordosa, N. Llorca-Isern, J. Sertucha and J. Lacaze                                              | 28  |
| <b>Reassessment of Crystal Growth Theory of Graphite in Cast Iron</b><br>D.M. Ștefănescu, G. Alonso, P. Larrañaga, E. de La Fuente and R. Suárez                                                    | 36  |
| <b>Effect of the Cooling Rate on the Graphite Nodule Count and Size Distribution in Nodular Cast Iron</b><br>H.M. Muhmond and H. Fredriksson                                                        | 45  |
| <b>Crystallography of Growth Blocks in Spheroidal Graphite</b><br>E. Brodu, E. Bouzy, J.J. Funderberger, B. Beausir, L. Laffont and J. Lacaze                                                       | 54  |
| <b>Degenerated Graphite Growth in Ductile Iron</b><br>B. Tonn, J. Lacaze and S. Duwe                                                                                                                | 62  |
| <b>Effect of Si and Ni Addition on Graphite Morphology in Heavy-Section Spheroidal Graphite Iron Parts</b><br>B. Bauer, I. Mihalic Pokopec, M. Petrič and P. Mrvar                                  | 70  |
| <b>The Influence of Trace Elements on the Nature of the Nuclei of the Graphite in Ductile Iron</b><br>G. Alonso, D.M. Ștefănescu, E. de La Fuente, P. Larrañaga and R. Suárez                       | 78  |
| <b>The Structure of Cast Irons</b><br>J. Campbell                                                                                                                                                   | 86  |
| <b>On the Primary Solidification of Compacted Graphite Iron: Microstructure Evolution during Isothermal Coarsening</b><br>J.C. Hernando and A. Diószegi                                             | 90  |
| <b>Stereological Analysis of the Statistical Distribution of the Size of Graphite Nodules in DI</b><br>A.A. Burbelko, D. Gurgul, E. Guzik and W. Kapturkiewicz                                      | 98  |
| <b>X-Ray Imaging of Formation and Growth of Spheroidal Graphite in Ductile Cast Iron</b><br>H. Yasuda, A. Sugiyama, C. Kiattisaksri, K. Morishita, T. Nagira, M. Yoshiya, K. Uesugi and A. Takeuchi | 104 |
| <b>Evolution of the Macrostructure of Gray Cast Iron from Eutectic to Hypereutectic Composition</b><br>M. López, J.M. Massone and R.E. Boeri                                                        | 110 |
| <b>Revisiting Models for Spheroidal Graphite Growth</b><br>M.K. Bjerre, M. Azeem, P.D. Lee, J.H. Hattel and N.S. Tiedje                                                                             | 118 |
| <b>Melt Stirring of Nodular Cast Iron</b><br>F.A. Khan and H. Fredriksson                                                                                                                           | 125 |
| <b>Influence of the Magnesium Treatment in a Georg Fischer Converter</b><br>M. Lueben                                                                                                               | 133 |
| <b>The Experimental Study of Nodular Cast Iron Volume Changes during Solidification</b><br>A.T. Tadesse and H. Fredriksson                                                                          | 140 |
| <b>Maximization and Control of Nodular Iron Melt's Self-Feeding Characteristics to Minimize Shrinkage</b><br>V. Anjos and C.A. Silva Ribeiro                                                        | 147 |
| <b>Density Variations during Solidification of Grey Cast Iron</b><br>K. Hellström, P. Svidró, L.V. Diaconu and A. Diószegi                                                                          | 155 |

|                                                                                                      |     |
|------------------------------------------------------------------------------------------------------|-----|
| <b>Extended Method of Volume Change Measurements during Solidification of Lamellar Graphite Iron</b> |     |
| P. Svidr , A. Di szegi and P.G. J nsson                                                              | 163 |

## Chapter 2: Alloyed Cast Iron and Austempered Ductile Iron

|                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Analysis of Nuclei in a Heavy-Section Nodular Iron Casting</b>                                                                               |     |
| M. Martinez, B. Domeng s, E. Hug and J. Lacaze                                                                                                  | 173 |
| <b>Transformation Kinetics and Mechanical Properties of Copper-Alloyed and Copper-Nickel Alloyed ADI</b>                                        |     |
| M. G rny, E. Tyra a and G. Sikora                                                                                                               | 181 |
| <b>Impact of Molybdenum on Heat-Treatment and Microstructure of ADI</b>                                                                         |     |
| J.A. Gogolin and B. Tonn                                                                                                                        | 188 |
| <b>ADI 1050-6 Mechanical Behavior at Different Strain Rates and Temperatures</b>                                                                |     |
| A. Ruggiero, G. Iannitti, S. Masaggia and F. Vettore                                                                                            | 196 |
| <b>Correlation between Microstructure and Mechanical Properties of Austempered Ductile Irons</b>                                                |     |
| V.C.C. Alves, L.L.d.A. Baracho, C.T.A. dos Santos, L.C.R. Lopes,  .d.R. Silva, F.R.F. da Silva, G.S. da Fonseca, R.H. Leal and M.d.P.C. Fonseca | 203 |
| <b>High Strain Rate Dynamic Deformation of ADI</b>                                                                                              |     |
| D. Myszk , M. Ahmed, A. Nofal, E. Sk lek and A. Hussein                                                                                         | 210 |
