## Preface

## Chapter 1: Materials and Technologies for Production in Opto- and Microelectronics

|                                                                                                                                                                                                                                              |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Morphological, Structural and Optical Characteristics of Porous GaN Fabricated by UV-Assisted Electrochemical Etching</b><br>N.S. Mohd Razali, A.F. Abd Rahim, R. Radzali, A. Mahmood and M.F. Bahrol Anuar                               | 3  |
| <b>Porosification Analysis on the Effect of Resistivity Dependence on N-Type Pulsed Porous Silicon</b><br>N.H. Abd Wahab, A.F. Abd Rahim, A. Mahmood, N.A.M. Napiah, R. Radzali and Y. Yusof                                                 | 12 |
| <b>The Effect of Needle Diameter on Optical Properties and Morphological Structure of La<sub>2</sub>O<sub>3</sub>- PVA Phosphor Nanofibers Prepared by Electrospinning Method</b><br>H.A. Wahab, Z. Hassan and N.M. Ahmed                    | 18 |
| <b>The Effect of Hydrogen Concentration on Chemical Vapour Deposition Synthesis of <math>\beta</math>-Ga<sub>2</sub>O<sub>3</sub> Nanostructures</b><br>P.R. Jubu, F.K. Yam and I. Ahemen                                                    | 27 |
| <b>Morphological and Structural Properties of Sol-Gel Derived ZnO Thin Films Spin-Coated on Different Substrates</b><br>N. Kasim, Z. Hassan, W.F. Lim, S.M. Mohammad and H.J. Quah                                                           | 35 |
| <b>Spin Coated CuO with Different Additives (PEG) Value Thin Film: Physical, Structural, Optical and Electrical Characteristics of CuO/PEG</b><br>R. Abdul Rahman, M.A. Zulkefle, N.S. Muhammad Kamar, Z. Mohamad, S.H. Herman and R.I. Alip | 43 |
| <b>UV Blue Light Conversion Using Dyes Polymeric Materials</b><br>A.F. Ismael                                                                                                                                                                | 52 |
| <b>Study of the Effect of Injection Currents on White Light Emission of Ce-Doped YAG Phosphor Powder Prepared by Microwave Combustion</b><br>H.R. Abd, Z. Hassan, N.M. Ahmed, A.F. Omar, K.S. Lau and F.H. Alsultany                         | 60 |
| <b>Synthesis and Characterization of YAG:Ce Phosphor by Microwave Induced Combustion Synthesis with Different Fuel Sources</b><br>K.S. Lau, Z. Hassan, W.F. Lim, H.J. Quah, N.M. Ahmed and H.R. Abd                                          | 69 |
| <b>Chromaticity Properties of Curcuminoids Dye Nanofibers Prepared by Electrospinning for White Light Down-Conversion</b><br>M. Al Shafouri, N.M. Ahmed, Z. Hassan and M.A. Almessiere                                                       | 77 |

## Chapter 2: Materials for Sensing Technologies and Planar Unipolar Devices

|                                                                                                                                                                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Agarose-Chitosan Based Hydrogel Waveguide Matrix: Comparison Synthesis and Performance for Optical Leaky Waveguide (OLW) Biosensor</b><br>S.R. Makhsin, P. Gardner, N.J. Goddard and P.J. Scully                                                                       | 87  |
| <b>Effect of Li Substitution in MgO Nanostructured on Band Gap Energy via Combustion Synthesis Method</b><br>N.F. Chayed, N. Badar, K. Elong and N. Kamarulzaman                                                                                                          | 97  |
| <b>Fabrication of SiNWs-FET Nanostructure Via Atomic Force Microscopy Lithography</b><br>N.N. Alias, K.A. Yaacob and K.Y. Cheong                                                                                                                                          | 103 |
| <b>Improved Rectification Performance and Terahertz Detection in Hybrid Structure of Self-Switching Device (SSD) and Planar Barrier Diode (PBD) Using Two-Dimensional Device Simulation</b><br>N.F. Zakaria, S.R. Kasjoo, M.M. Isa, Z. Zailan, M.K. Md Arshad and A. Song | 111 |
| <b>Photometric Detection of Heavy Metals Using Biosynthesized Gold Nanoparticles</b><br>A.I. Usman and A. Abdul Aziz                                                                                                                                                      | 118 |

|                                                                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Preparation of Novel Commercial Polyaniline Composites for Ammonia Detection</b><br>M.M.J. Albar, N.A. Jamion, S.N.A. Baharin, M. Raoov and K.P. Sambasevam | 124 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

### **Chapter 3: Materials in Photovoltaics and Photocatalytic Technologies**

|                                                                                                                                                                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Application of Conjugated Chlorophyll from Natural Dye (<i>Imperata cylindrica</i>) to Apply in Hybrid DSSC as Third Generation Solar Energy</b><br>N. Ishak, H. Salleh, S.A. Rahman, A.N. Dagang, N.H. Kamarulzaman, Z. Ahmad, S.N. Abd Majid and S.M. Ghazali                                         | 135 |
| <b>Boron Nitride Doped Polypyrrole Hybrid Composites for Photocatalytic Degradation of 2-Chlorophenol from Aqueous Solution</b><br>F. Yunus, M.S. Kassim, S. Shahabuddin, N.R. Said and S.N.A. Baharin                                                                                                     | 145 |
| <b>Effect of Ultrasonic Agitation and Spin Coating Speed on the Photovoltaic Properties of Inverted Organic Solar Cell Using Solution-Dispersed Copper Iodide as Anode Buffer Layer</b><br>F.L. Khairulaman and C.C. Yap                                                                                   | 153 |
| <b>A Simplest, Cheapest and Most Efficient Technique to Enhance the Performance of Solid State Dye-Sensitized Solar Cell: Deposition of Purple Seaweed as a Photosensitizer</b><br>S.M. Ghazali, H. Salleh, A.N. Dagang, N.A. Nik Ali, N. Ishak, N.H. Kamaruzaman, M.S.M. Ghazali, M.N. Md Daud and N. Ali | 160 |
| <b>Broadband Anti-Reflection in Black Silicon Fabricated by Two-Step Silver-Assisted Wet Chemical Etching for Photovoltaics</b><br>A. Abdulkadir, N.A. Md. Noor, A. Abdul Aziz and M.Z. Pakhuruddin                                                                                                        | 167 |
| <b>Photocatalytic Fuel Cell Based on Zinc Oxide Loaded Carbon Plate Photoanode for Simultaneous Photocatalytic Degradation of Azo Dyes and Electricity Generation</b><br>Y.P. Ong, L.N. Ho, S.A. Ong, B. Johar and A.H. Ibrahim                                                                            | 175 |
| <b>Ray Tracing of Light Trapping Schemes in Thin Crystalline Silicon for Photovoltaics</b><br>M.Z. Pakhuruddin                                                                                                                                                                                             | 183 |

### **Chapter 4: Functional and Special Materials**

|                                                                                                                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Electrochemical Performance of Mn and Fe Substitution in <math>\text{LiCo}_{0.9}\text{X}_{0.1}\text{O}_2</math> Cathode Materials</b><br>N.S.S. Mohd Abdillih, N. Kamarulzaman, K. Elong, N. Badar and M.S. Mastuli | 195 |
| <b>Impact of Eu Nanoparticles Substitution for Ca Site in <math>\text{Bi(Pb)-2223}</math> Cuprates Superconductor</b><br>E.S. Nurbaisyatul, H. Azhan, A. Kasim, I. Norazila and S.F. Saipuddin                         | 202 |
| <b>Long Chain Imidazolium Ionic Liquids as Templates in the Formation of Mesoporous Silica Nanospheres</b><br>E.D.M. Isa, H. Ahmad and M.B.A. Rahman                                                                   | 209 |

### **Chapter 5: Polymeric and Composite Materials**

|                                                                                                                                                                                                                                    |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Effect of Acetylation Contact Time to the Physical and Mechanical Properties of Jack Fruit Rind Cellulose Acetate (JR-CA) Reinforced Gelatine Film</b><br>W.A. Rahman, N.S. Anuar and N.A. Majid                                | 219 |
| <b>Study on Effect of Fiber Orientation on Flexural Properties of Glass Fiber Reinforced Epoxy Composite Laminates for Structural Applications</b><br>H.F.A. Marzuki, E.A.E. Ubaidillah, S.A. Sivarasa, M. Syamsul and M. Mustapha | 227 |
